Preface

The *Tathāgatagarbhasūtra* (*TGS*) is a relatively short text that represents the starting point of a number of works in Indian Mahāyāna Buddhism centering around the idea that all living beings have the buddha-nature. The genesis of the term *tathāgatagarbha* (in Tibetan *de bzhin gshegs pa'i snying po*, in Chinese *rulai zang* 如來藏), the key term of this strand of Buddhism and the title of the sūtra, can be observed in the textual history of the *TGS*. From there it set off to enjoy a phenomenal career in Central and East Asia, revolutionizing the understanding of Buddhist thinkers and leaving a deep impression on Buddhist philosophy and spirituality. This impact can be felt even today. Nowadays, the concept of the buddha-nature attracts attention also among Buddhist practitioners in the West. Academically, the study of this third large strand of Mahāyāna Buddhism, which never became a dogmatically systematized line of thought, has been, and still is, dominated by scholars from East Asia. This, and the historical fact that it was doctrinally absorbed by the two main schools of Mahāyāna Buddhism on Indian soil, the Madhyamaka and the Vijñānavāda, could be the main reason why the existence of *tathāgatagarbha* thought has hardly been noticed in many Western academic surveys. In recent decades this has changed for the better, and it is probably no exaggeration to call the study of the theory of the buddha-nature today one of the main vehicles of exchange between scholars of the East and the West in the domain of Buddhist studies.

Convinced that a detailed study of the earliest expressions of buddha-nature thought would be a rewarding task, I was first confronted with the need to establish a reliable textual edition of the *TGS* which, in light of the fact that no Sanskrit manuscripts of the *TGS* have been transmitted to us, takes into account all available translations. The collation of the Tibetan and the Chinese texts of the *TGS* by Kyōshun Tōdō in 1959, though progressive for his time, cannot meet these basic needs. My decision to produce a more comprehensive edition, one making use of the *Tibetan* materials, was based on three reasons. First, the Tibetan translators in general followed, more so than the Chinese, a literal style of translation, so that concrete inferences regarding the Indian text can be drawn for large parts of it. Secondly, the hitherto accepted assumption that the oldest available translation of the *TGS*, by Buddhahadra, by virtue of its age and uniqueness, reflects an Indian transmission which has not undergone the textual alterations of later centuries, is only partly true. Certain additional textual blocks in the Tibetan were doubtlessly interpolated at a later stage, but the source of the citations in the *Ratnagoṭravibhāga(vyākhyā)*, a *śāstra* which was written at least fifty years before Buddhahadra translated the sūtra, has turned out to be the recension represented in the Tibetan tradition.¹ Finally, given that the *Ratnagoṭravibhāga(vyākhyā)*, the most influential treatise on the *tathāgatagarbha* theory in India, based itself on the recension reflected in the Tibetan, this recension became, in terms of the impact it had (its *wirkungsgeschichte*), increasingly referred to in the following centuries.

As luck would have it, in the process of my work a second, paracanonical Tibetan translation of the same sūtra, from Bathang, came to my notice. I present it in a diplomatic edition, directly facing the standard Tibetan translation. The

¹ Whether or not the later interpolations were at that point already a part of this recension of the *TGS* cannot be decided.

second part of my work contains critical editions of the canonical Tibetan translation, the diplomatic edition of the translation from Bathang and the two edited Chinese translations. As my translation of the sūtra is based on the Tibetan canonical version, I invested much time in the critical edition of this latter, collating all philologically relevant manuscripts and block prints, among them even some folios from the now famous Tabo monastery. A description of the characteristics of the fourteen manuscripts and block prints and the conclusions drawn about their stemmatic relations form another important element of the second part of my study. With this I hope that a contribution has been made to the Kanjur studies started in the last decades of the twentieth century by the pioneers in the field, Helmut Eimer and Paul Harrison.

For the Sinologist dealing with Buddhist canonical materials, the second part may be of particular interest for its results concerning the transmission of Buddhist sūtras in the Taishō Tripiṭaka. Although the text of the older Chinese translation has been transmitted fairly well in the Taishō, that of the eighth-century translation of Amoghavajra found in the Zhonghua Dazangjing 中華大藏經 represents a much better transmission. Based on this text, the Taishō version had to be emended in a fairly high number of cases. The Zhonghua Dazangjing 中華大藏經 should from now on be regarded as an indispensable tool for any critical edition of Chinese Buddhist material contained in it.

The first part of my study consists of an annotated translation of the canonical Tibetan version, preceded by an analysis of the textual history of the *TGS*, an interpretation of the term *tathāgatagarbha*, a discussion of the authors' ideas as reflected in the sūtra, and the specification of the place of the *TGS* in Indian Buddhist history. In order not to go beyond the framework adequate for a study of this kind, I have had to strictly limit my discussions to the *TGS*. Only sporadically have I been able to take into account facts which reflect a later stage of development of the theory of the buddha-nature. Some of the reflections, particularly in section 4.4, have therefore had to remain abridged, and are doubtless in need of much more detailed and comprehensive argumentation. I hope that the future will provide me the possibility of treating such points with the detail they surely deserve.

The decision to compose this study in English was taken for the sake of readers who do not know German. I apologize for any unidiomatic phraseology, but nevertheless hope that the formulations are clear enough.

Acknowledgements

I am indebted to a great number of people and institutions who enabled me to produce this study. I owe the most to my teacher Professor Lambert Schmithausen, under whom I studied up to my M.A. and who also agreed to become my *doktorvater* for the present work, which was submitted in a slightly different form to the Asien-Afrika-Institut at Hamburg University. His inspiring suggestions and valuable corrections, and generosity with his time, made possible its successful conclusion. It has always been a great pleasure to learn from him, and there is no suitable way to express my gratefulness.

There are other scholars in Hamburg whom I wish to thank too. I am grateful to Professor Albrecht Wezler whose stimulating lectures and seminars on

Indian philosophy I greatly appreciated, and who also supported me in other ways. On the Sinological side I am indebted to Professor Michael Friedrich. Since his coming to Hamburg, there has developed a very fruitful dialogue between Buddhologists of the departments of Sinology and Indology. Thanks are also due to Professor David Jackson and to Dr. Felix Erb, the librarian in the Hamburg institute. Dr. Harunaga Isaacson read through my work and offered important advice and suggestions. Parts of the book have been put into a better English by my friend Keishō VK Leary and by Philip Pierce. The responsibility is, of course, mine. Again, my thanks to all of them.

I stayed in Japan during most of the time of my doctoral work and had the privilege to be financially supported by two institutions: the Bukkyō Dendō Kyōkai 仏教伝道協会 (“Society for the Promotion of Buddhism,” Tokyo) and the only recently established International Research Institute for Advanced Buddhism in Hachioji (Tokyo). I am very grateful for their generous support. In particular I would like to express my thankfulness to the scholars working at the institute in Hachioji for accepting this work as a volume in their series. In Japan I had the chance to meet with many eminent scholars, foremost among whom is the father of modern *tathāgatagarbha* studies, Professor Takasaki Jikidō. On several occasions I had the honor to receive his guidance in this field. Thanks are also due to my supervisors in Japan: Professor Mimaki Katsumi in Kyoto and learned persons at the institute in Tokyo: Professor Kajiyama Yūichi, Professor Yuyama Akira and Professor Karashima Seishi. They all looked after both my academic and practical needs.

In Kyoto I was invited to join the weekly study group under the guidance of Professor Nagao Gadjin. I am particularly indebted to him and all of the members of this group. Kyoto is also associated for me with Professor Aramaki Noritoshi and Professor Florin Deleanu, with both of whom I frequently met to discuss academic questions and whose acquaintanceship was highly beneficial.

Equally advantageous were my meetings with Professor Hara Minoru, whose vast knowledge of Indian literature I can only admire. He opened to me the doors of the superb library of the International Institute for Buddhist Studies in Tokyo. My thanks are also due to Professor Yotsuya Kōdō and the staff of that library. Further I feel indebted to Dr. Helmut Eimer, Professor Enomoto Fumio, Professor Eli Franco, Professor Funayama Tōru, Professor Kagawa Takao, Professor Kanno Hiroshi, Mr. Werner Knobel, Dr. Carsten Krause, Dr. Mudagamuwe Maithrimurthi, Professor Matsuda Kazunobu, Professor Matsumoto Shirō, Professor Moriyama Seitetsu, Professor David Seyfort Rugg, Professor Shimoda Masahiro, Dr. Jan-Ulrich Sobisch, Professor Toda Hirofumi, Dr. Eva Wilden and Professor Stefano Zacchetti, and would like to thank them for their counsel and support. Last but not least, I wish to thank the fellow students who have also contributed to the completion of my work, in the first place my friends in Hamburg: Mrs. Orna Almogi, Mr. Achim Bayer, Mr. Martin Delhey, Mr. Peter Lutum, Miss Nakamura Ayako, Miss Ozawa Akiko, Mr. Johannes Vagt, Mr. Dorji Wangchuk and Mrs. Yang Mei.

Technical Note: My Use of the Asterisk

I have employed an asterisk (*) before Sanskrit terms throughout the study when the Tibetan translation did not allow an unambiguous reconstruction of the original. In many cases, however, parallel passages in the *Saddharmapuṇḍarīka-sūtra* and other texts serve as proof for the reconstructed form, for which I then did not use an asterisk. Similarly, I have refrained from employing an asterisk whenever *Bth* and the Chinese translations support a certain reconstruction (based on *Tib*) and exclude any other possibilities. One should, nevertheless, keep in mind that Tibetan translation rules and vocabulary are much less regularly and mechanically employed than is usually assumed.² To speak with *absolute* certainty concerning the reconstruction of the Sanskrit terminology is impossible.

² On this subject, see Seyfort Rugg 1992: 382ff.

Part I

A Study and Annotated Translation

of the

Tathāgatagarbhasūtra

A General Study and Text-historical Considerations

In comparison with the vast amount of work to be done in the field of Indian Mahāyāna it would seem to be an easy task to focus on a single sūtra. Nevertheless, even such a limited undertaking has the potential to extend its reach significantly, inasmuch as research of this kind touches on several quite different topics of scholarly activity. One is the topic of the Tibetan textual transmission itself which will be dealt with extensively in part II. In part A I will focus on text-historical considerations and present a study of the fundamental terminology used in the text, the doctrine it expounds, and its place in Indian Buddhism. It goes without saying that, in order to cover these different aspects, I have had to restrict myself to what appeared most essential. In the following I would like to give a very short overview of the content of part A, and, at the same time, to draw attention to what I consider the most important outcome of my research in it.

In chapter 1 I first deal with the interrelationship among the four oldest translations of the *TGS* (1.1). Three of them, it turned out, represent the same recension (*TGS*₂), while the older Chinese translation is the single representative of another, shorter recension (*TGS*₁). From a detailed analysis of the relation of the two recensions to the nine similes reproduced in the *Ratnagoṭravibhāga*, it was possible to prove that, though *TGS*₁ was the earlier translation (fifth century), the similes in the *Ratnagoṭravibhāga*, itself a work which probably came into existence as early as the fourth century, are based on *TGS*₂. Section 1.1 further contains a study of the main terminological differences between the two recensions, and 1.2 and 1.3 deal with the differences between the three representatives of *TGS*₂. Each translation of this latter has its own unique features, but no telling traits could be found that would establish their interdependence.

Section 1.4 offers an analysis of the structure and textual history of the sūtra. The main result of this chapter lies in localizing and proposing explanations for compositional irregularities in the first simile. I could thereby show that the textual history of the *TGS* can be divided into at least three steps. The term *tathāgatagarbha* was only introduced into the sūtra during the third step, as an insertion into the middle of the first simile. In the last eight similes, which one can consider the starting point and nucleus of the sūtra, there are no occurrences of this term.

Section 1.5 ends the first chapter. I deal there with the basic structure of the similes and discuss an adequate method of interpreting them. The content of each simile is summed up. By this means the richness and varying nuances of the authors' message in them are brought to light.

Chapter 2 is devoted to the terms *tathāgatagarbha* and *garbha*. In a comprehensive grammatical analysis in section 2.1 I discuss all intelligible ways of understanding the compound *tathāgatagarbha*. The most fitting interpretation in the context of the *TGS* is that of a *bahuvrīhi* meaning "containing a tathāgata," in reference to living beings. The context of a growing process suggested by two of the similes and the parallelism with the term *buddhadhātu* of the *Mahāparinirvāṇasūtra* may, however, have contributed to the prevailing

tatpuruṣa use of the compound in the later tradition.

In section 2.2 I first analyze all passages in which the compound *tathāgatagarbha* appears, and suggest an answer to the question why the Tibetan translators did not apply the particle *can* in their rendering of the compound. The most significant findings in this section center around two difficult passages of the sūtra concerning the term *tathāgatagarbha*. For one passage (verse 1.1), I could demonstrate with the help of a parallel in the *Ratnagoṭravibhāga* that the verse was understood wrongly by the Tibetan tradition. In the second case (5A) there is strong textual evidence from the Chinese and the alternative Tibetan translation from Bathang: instead of the correct *tathāgata-jñāna*, we find in the canonical Tibetan translation a rendering of °*garbha*, a mistake which may even go back to the Sanskrit manuscript used by the translators. Another verse (10.10), however, clearly documents a non-*bahuvrīhi* use of *tathāgatagarbha*. There are several indications, though, that this verse was not part of the oldest form of the *TGS*. Regarding the use of the term *garbha*, it seems that, contrary to the practice in the translation from Bathang, the canonical team of translators took care to differentiate between *garbha* as the space inside the calyx of a lotus (*padmagarbha*, *pad ma'i snying po*) and the petals forming its enclosure (**padmakośa*, *pad ma'i ssubs*). With equal rigor, on the other side of the simile (*upameya*), *snying po* was used in the canonical Tibetan translation only in the meaning “embryonic essence” of living beings but not as indicating their “inside” or “womb.”

At the beginning of section 3.1 I provide a chart with all the terms of the *TGS* used to designate the buddha-nature of living beings. Among them a variety of expressions ranging from concrete terms like *jinakāya* to more abstract ones is then analyzed. Yet all the terms are interchangeably employed by the authors of the sūtra in combination with the concrete vocabulary of the *upamāna*, a fact that implies that their main aim was to convey the idea of the inherent buddhahood of all living beings in easily comprehensible terms rather than to go into a detailed scholastic discussion of the exact properties of this hidden buddhahood. The terms (*tathāgata-*)*dharmatā* and *tathāgatadhātu* are dealt with at greater length. I have tried to make clear why we can by no means be sure that the former term is meant to be understood as “absolute truth” similarly to *tathatā* (it must rather mean “character/nature (of a *tathāgata*)” without any monistic connotations), and why the term *dhātu* in the passage of the *TGS* is bare of any notion of causality—a notion which does, however, characterize the *Mahāparinirvāṇasūtra* and the later *tathāgatagarbha* tradition. (The passage containing *dhātu* in the *TGS* is cited in the *Ratnagoṭravibhāgavyākhyā*, and there used to prove that *dhātu* should be understood as *hetu*.) From my analysis it thus becomes clear that all the terms for the buddha-nature employed in the *TGS* refer to the level of spiritual perfection. They indicate a state or entity which is already present and in no need of any further ripening or essential change, though two of the similes could at first glance provoke a different understanding.

To show in detail why I think these two similes were not created in order to introduce a notion of ripening into the idea of the buddha-nature in all living beings is one concern of section 3.2. The idea the authors of the sūtra had in mind

can be called a “theory of revelation.” The perfect state of buddhahood is already present in all living beings. It is nevertheless covered with defilements and has to be revealed or manifested in order to become efficacious. In fact, the main category on which the authors’ ideas center is that of efficaciousness. Efficaciousness functions as the decisive criterion which distinguishes the buddha from the *sattva*, the authors’ focus on and illustration of this one category by far outweighing any concern for a neat and systematic conception of the two different soteriological states. Here the sūtra reveals its true character: rather than pose the question of how the new message might be philosophically brought in line with other, traditional Buddhist doctrines, and formulate or discuss a possible metaphysical principle going beyond the concrete frame of an individual buddha-nature in the similes, the authors of the text seem to have pursued fairly pragmatic ends. This accords well with the fact that for them, becoming and being a buddha means in the first place to actively perform buddha-deeds. All these observations have led me to argue that the sūtra’s origin has probably to be sought among circles of Buddhists characterized by an “attitude of worldly engagement predominating over mainly theoretical concerns”—a hypothesis which, of course, needs to be further substantiated and elaborated on the basis of other writings of the *tathāgatagarbha* teachings.

In section 3.3 I try to shed light on the process of purification from the defilements. While the **Tathāgatotpattisambhavanirdeśa*, which in view of one of its similes can be seen as the closest predecessor of the *TGS*, distinguishes clearly between the role of the Tathāgata in the liberation process of living beings, on the one hand, and the active participation of living beings themselves on the other, the *TGS* is in this respect more vague, so that sometimes the part living beings play recedes completely behind what indeed appears to be the almighty figure of the Tathāgata. Nevertheless, there are passages in the *TGS* which document that it was by no means its aim to exclude living beings from such participation. Rather, it was simply that the authors’ focus lay on other issues.

Section 4.1 is an overview of the titles under which the sūtra has been translated and cited. The oldest title of the sūtra in Sanskrit most probably was *Tathāgatagarbha-nāma-vaipulya*(or: *vaitulya*)-sūtra.

In section 4.2 I deal with the oldest available catalogues of translated Buddhist literature in China with regard to the records on the *TGS*. At the center of my analysis is the question of the plausibility of an entry in the *Chu sanzang ji ji* 出三藏記集 which claims the existence of a Chinese translation of the *TGS* for as early as the end of the third century CE by Faju 法炬. Whereas the attribution of another translation of the *TGS* to Fazu 法祖 (active ca 290–306), in the catalogue of Fei Changfang 費長房, most probably does not correspond to historical fact, the situation regarding Faju is more complex. Much depends on the evaluation of the credibility of the entries in the *Chu sanzang ji ji* said to be largely based on the famous but lost catalogue of Daoan 道安. My study shows that there are good reasons to deal more critically with this part of the *Chu sanzang ji ji*. Its compiler Sengyou 僧祐 has always enjoyed the highest esteem among scholars who work with the difficult material of Chinese Buddhist catalogues. This may have led to a certain lack of judiciousness when it came to

the reconstructed entries of Daoan. Although I can show that the *Chu sanzang ji ji* probably knew of two conflicting traditions concerning the history of Chinese translations of the *TGS*, the claim that a translation of the sūtra already existed in the third century is not in itself at all unreasonable. Concerning the translations by Buddhahadra and Amoghavajra no further material for their exact dating could be found.

As for the motives of the authors of the *TGS* (section 4.3) there are a variety of possibilities. The non-philosophical and non-scholastic style hints at the likelihood that they were writing primarily for non-specialists of the Buddhist doctrine. One of the motives could thus have been to attract to religious practice hitherto neglected segments of the Buddhist community, or even groups from outside it. The *Saddharmapuṇḍarīkasūtra* may have been another important factor leading to the composition of the *TGS*. The *Saddharmapuṇḍarīkasūtra* puts forward the *ekayāna* theory, namely that all living beings can become buddhas. The *TGS*, from the mouth of the Buddha, provides a sound, if ideal, soteriological “proof” of this assertion. The fact, however, that nowhere in the sūtra are there ethical conclusions drawn on the basis of this *ekayānist* theory of equality somehow comes as a surprise.

In the first part of section 4.4 I try to establish a *terminus ante quem* for the *TGS*. Based on considerations of a doctrinal nature, the similar metrical structure of parts of the *Ratnagoṭravibhāga* and the *Mahāyānasūtrālamkāra*, the progress of philosophical thought from the *Mahāyānasūtrālamkāra* to Vasubandhu’s *Triṃśikā*, and the fact that a citation from the *Triṃśikā* is found in the *Laṅkāvatārasūtra*, the middle of the fourth century CE is a probable date before which the *TGS* should have been composed. The *TGS*, having clearly taken ideas from the **Tathāgatopattisambhavanirdeśa* and the *Saddharmapuṇḍarīkasūtra*, must be attributed a position within a strand in Buddhism which does not conceal its favor for the concept of a positive continuous subject—a strand which has its roots in the canonical scriptures. The notion of *śūnyatā* in its established meaning does not play any decisive role in the *TGS* or in other early *tathāgatagarbha* texts. According to the *Ratnagoṭravibhāga*, the *tathāgatagarbha* teaching can be understood as complementing or even correcting ideas related to *śūnyatā*. Though the *TGS* does not present a philosophically homogeneous framework, and even if its main impetus may indeed have been to encourage people to become active Buddhist followers, its soteriological conception of a buddha-nature present in all living beings cannot easily be discarded as mere *upāya*, that is, as pure means apart from any claim that the message embraces a true statement about the constitution of reality. Such a disclaimer would contradict the thrust of the authors’ work, even if their idea of living beings’ eternal buddhahood on the road to efficaciousness comes close to the “non-Buddhist” *ātman* doctrine, and can in the eyes of somebody aiming to doctrinally harmonize Mahāyāna provoke doubts about the Buddhist character of the *tathāgatagarbha* teaching. This is exactly what has been done by the representatives of the “Critical Buddhism” group, with whom I shortly deal at the end. I feel that they are not willing to accept that Buddhism from early times on has been a heterogeneous phenomenon, one impossible to identify by two main tenets of purely doctrinal

matter, in the way its critics do. I further believe that what they postulate to be “true Buddhism,” that is, “Critical Buddhism” in the sense they understand it, is another inadmissible restraint of Buddhist traditions.

Section 4.5 tries to identify the texts in which citations from the *TGS* are contained. The *Ratnagoṭravibhāga(vyākhyā)* is the most important among them. Though the *Ratnagoṭravibhāga* has rendered faithfully the content of the nine similes of the *TGS*, there is at least one instance where it has introduced a notion not found in the parallel passage of the *TGS*. This notion can be called “traditionally Buddhist” inasmuch as it emphasizes the necessity of several factors for the ripening of a sprout, which here illustrates the living being’s buddha-nature. In the *vyākhyā*, however, one of the very few word-for-word citations from the *TGS* is interpreted differently from the *Ratnagoṭravibhāga* itself. Further, the *vyākhyā* has tried to apply an unnatural scheme to the similes and has reduced their richness of descriptive nuance to a purely scholastic analysis focused on the main categories of *buddhadhātu* and *kleśa* and their subcategories.

Finally, in section 4.6 I describe the history of the twentieth-century reception of the *TGS*. The studies of the *tathāgatagarbha* teaching in general have experienced a rapid acceleration since the 1960s. Both the Chinese and Tibetan translations of the *TGS* have been studied under various approaches aimed at different groups of readers.

1 Textual History and Structure of the *TGS*

1.1 Different Recensions of the *TGS*

The *TGS* can be said to exist in two recensions:

- Recension *TGS*₁, represented by the Chinese translation of Buddhahadra dating from the beginning of the fifth century CE (*Ch*₁), and
- Recension *TGS*₂, represented by the Tibetan canonical translation dating from around 800 CE (*Tib*),¹ the Tibetan paracanonical translation from Bathang (*Bth*), and the Chinese translation of Amoghavajra from about the middle of the eighth century (*Ch*₂).

Differences between *TGS*₁ and *TGS*₂ are documented in the notes on every page of my translation. Among these differences are several major ones of a purely quantitative nature:

- *Ch*₁ lacks the list of attributes of the *arhats* in 0B.
- The whole section 0C (the enumeration of participating monks) is missing in *Ch*₁.
- *Ch*₁ lacks verse 0.5.
- The repetitive passage at the end of 10B and the beginning of 10C is missing in *Ch*₁.
- The introduction to the story of *Sadāpramuktaraśmi in 11A is missing in *Ch*₁ (the passage in question has no counterpart in the verse portion of either recension).
- Sections 12A and 12B (the question of Ānanda) are missing in *Ch*₁.

¹ On the authorship of the Tibetan canonical translation according to the colophons, see section 3.3 in part II.

All these differences can be shown to be additions of *TGS*₂ rather than parts dropped by Buddhahadra.² In the following, I will deal with possible answers to the question why the above-mentioned passages were introduced into *TGS*₂.

The list of attributes of the *arhats* in 0B is a stock phrase description found in many other sūtras as well. The addition shows that from a certain time on it was probably thought of as a requisite element.³ The same can be said for the addition 0C, where 19 names of participating monks are listed. The best-known disciples of the Buddha are among the *arhats*. The mention of Ānanda was probably felt to be especially important, since he later questions the Buddha in 12A and 12B, sections missing in *Ch*₁.

Verse 0.5 goes beyond the rather rational question in the parallel prose section 0J. It is an emotional appeal to the Buddha, who is addressed by the epithets “Highest among Humans” (*dvipadottama*) and “Divine One” (*deva*), and requested to answer for the sake of all living beings. That the Buddha has to be requested (as many as three times) to teach is also a common element in many sūtras.⁴ The convention goes back to the early sources, which report that the Buddha was asked three times to teach by the god Brahman before he decided to do so. It is surprising that the parallel prose section remained untouched by the redactors of *TGS*₂.

In the case of the additional part in 10B/C, I cannot find any convincing reason why the redactors of *TGS*₂ felt the need to enlarge the text. The veneration of the tathāgatas in the repetitive section is reduced to the strewing of flowers (as opposed to the donation of pavilions in the part common to *TGS*₁ and *TGS*₂). In the interpolation, instead of the realization of tathāgata-knowledge as the starting point, we find the search for the Dharma (*dharmam paryeṣate*); the “sons or daughters of good family” are replaced by “monks, nuns, *upāsakas* or *upāsikās*”; finally, instead of the internalization or arrangement into a book of as little as one simile, there is the veneration and joyful approval (*anumodanā*) of the sūtra. This last feature is typical of the *Saddharmapuṇḍarīkasūtra* (see *SP*₁ s.v. forms of the stem *anu-mud*) and other Mahāyāna sūtras, and I suspect that this may have induced the redactors to interpolate the repetitive section into *TGS*₂.

The introductory passage to the story of *Sadāpramuktaraśmi in 11A, stressing the beneficial effect of the *TGS*, resembles in its syntax the introduction to the story of Sadāparibhūta in the XIXth chapter of the *Saddharmapuṇḍarīkasūtra* (see note in my translation). As it is not found in *Ch*₁, it could well be an element, again based on a set phrase found in the *Saddharmapuṇḍarīkasūtra*, inserted later in order to smooth the transition from the sections on merit to the story of *Sadāpramuktaraśmi.

Sections 12A and 12B are not found in *Ch*₁, nor do they have a counterpart in the following verses of either recension. They contain Ānanda’s question about the length of time till perfection and the Buddha’s answer. Explanations directed to Ānanda are a common element in Mahāyāna sūtras. This is understandable, since it is he alone who is generally said not to have attained arhatship among the Buddha’s main disciples. Besides, he is often entrusted with the preservation of

² The additions are discussed in the notes to the corresponding passages in my translation.

³ The same situation holds true for the *Vimalakīrtinirdeśa*. The list of attributes is found only in the Tibetan (see Lamotte 1962: 97).

⁴ See, for example, the second chapter of the *SP* where Śāriputra requests the Buddha three times to expound the Dharma.

the expounded discourse (at the end of the sūtra), having been, according to the tradition, known for his excellent memory.⁵

The position of the interpolation towards the end of the sūtra is thus not surprising, though the passage in question does not directly deal with the preservation of the *TGS*. The redactors placed it within the originally monolithic verse section 11I and 12C. In order to join the interpolation neatly with the following verse triplet, they added a sentence at the end of the interpolation dealing with the worthiness of whoever preserves the *TGS*, which is the theme of the following three verses. The content of Ānanda's question, on the other hand, seems rather unique. One would have expected the stock question about the title(s) of the exposition⁶ if the purpose had been to create a context for the appearance of Ānanda. As a matter of fact, the relation of the question to the other parts of the *TGS* is not obvious, and I suspect that Ānanda's question was originally simply another more or less independent episodical unit before it became integrated into the *TGS*.

The fact that *Ch*₁ covers just two thirds of the length of *Ch*₂ cannot simply be explained by these obvious interpolations, and the reasons must also be looked for elsewhere. When it comes to differences of style and content, the situation is much more complex. Although the same basic ideas can be found in both recensions, it seems that in the details, that is, terminology and syntactic relations, the recensions vary widely. The style of *Ch*₁ appears to be much more concise: the number of characters per pāda is only five (*Ch*₂: seven), enumerations are generally abbreviated, and the line of narration seems to focus only on issues of main importance. My impression is that *Ch*₁ sticks less slavishly to an Indian original and, in contrast to the representatives of *TGS*₂, also reproduces almost no inconsistencies which may already have been part of the Indian transmission.

Besides these characteristics we find other terminological and doctrinal features which, more or less, seem to be peculiar to *Ch*₁:

- a. Throughout the similes, the compound 如來藏 (or: 佛藏), usually rendering *tathāgatagarbha*, is used 20 times in *Ch*₁. In the Tibetan, the usage is restricted to the first simile, where it appears 4 times. In *Ch*₂, besides these 4 times in the first simile, it is found a further 5 times in other similes.⁷ In cases where *Ch*₁ employs 如來藏 (or: 佛藏) in contrast to the Tibetan, the Tibetan is based on *tathāgata-dharmatā* (4 times), **jīna-kāya* (or: *sugata*^o, *tathāgata*^o; 4 times), *tathāgata* or *buddha* (3 times), *buddhabhūmi*, *buddhatva* (*sangs rgyas nyid*) or **avināśadharmin* (*chud mi za ba'i chos can*). In one passage of the first simile, *Ch*₁ reads 如來身 in contrast to *tathāgatagarbha* in the Tibetan and *Ch*₂.
- b. In *Ch*₁ the term 如來藏 (*tathāgatagarbha*) designates a separate entity found within living beings.⁸ Amoghavajra in *Ch*₂ seems to share such an understanding.⁹

⁵ See Lamotte 1962: 392, n. 40; Buddhist tradition has it that Ānanda took a vow to become the first of "those who have heard a lot" (*bahuśruta*) (*MPPU*_L I 223).

⁶ See Lamotte 1962: 392, n. 41.

⁷ See the comparative list in Takasaki 1974: 48–53 (令其清淨而成於佛 on p. 50 (III.2) is to be corrected to 如來藏).

⁸ See OM: 身中有如來藏; 1.3: 佛觀衆生類悉有如來藏; 1.5: 佛藏安隱住; 2A: 一切衆生有如來藏; 2.2: 衆生如來藏 ("the *tathāgatagarbha* [of] living beings"); 5B: 諸衆生有如來藏; 6.2: 身內如來藏; 7B: 如來妙藏在其身內; 8B: 其身皆有如來寶藏; 8.3: 身懷如來藏; 9B: 一切衆生佛藏在身. Only 8.4 and 1B could be interpreted differently: 汝身如來藏 (8.4): "Your body [is]

- c. *Ch*₁ tends to describe only the buddha-nature of living beings as wrapped in defilements.¹⁰ *TGS*₂, on the other hand, so describes both the buddha-nature and living beings.¹¹
- d. A translation of the term *dharmatā* appears only once throughout the whole of *Ch*₁, while its usage is frequently attested for *TGS*₂ (*chos nyid*; 法性). This single usage of *dharmatā* in *Ch*₁ is found in the passage quoted in the *Ratnagoṭravibhāgavyākhyā* (see 1B): 法爾. The Tibetan employs the term *chos nyid* (for *dharmatā*) altogether in 9 instances, for 7 of which there is a corresponding text in *Ch*₁. In these 7 cases, *Ch*₁ uses the terms 如來藏 (4) and 如來性 (3). *Ch*₂ in these passages operates with 法性 (4) and 法 (verse), 法藏, and 如來藏性 (each once). In the two other passages *Ch*₂ reads 法性和 法 (verse).
- e. The term “bodhisattva” appears 34 times throughout *Tib*.¹² *Ch*₁, however, uses the term only 21 times. Among these are 3 cases where *TGS*₂ does not mention the term (7.5, 10B, 10.3). In 7 instances *Ch*₁ uses more general terms like 衆生 (*sattva*) or 咸 instead. Five cases are without any correspondence in *Ch*₁.
- f. While *Tib* uses the stock phrase “Tathāgata, Honorable One and Perfectly Awakened One” 14 times, it is only found 3 times in *Ch*₁, and in these once in a passage where all versions of *TGS*₂ read only “tathāgata” (6B). Otherwise, *Ch*₁ resorts to the terms 如來 (3), 我 (2), 佛 (2), or 世尊 (1), and when *TGS*₂ speaks of the attainment of the designations “Tathāgata, Honorable One and

the store of a tathāgata!” However, such an understanding is unlikely in view of the preceding verse 8.3: 身懷如來藏. In 1B, 諸佛法爾, 若佛出世, 若不出世, 一切衆生如來之藏常住不變。 corresponds to the citation in the *RGV* (... *sadaivaite sattvās tathāgatagarbhā itī* !). The Chinese can be understood as “The store of a tathāgata [in] all living beings is at all times present without change” or possibly “All living beings [are] stores of a tathāgata; [this true nature of all things] is at all times present without change.” The latter translation is unlikely because the subject (法爾 for *dharmatā*) and its predication (常住不變) appear separated from each other.

⁹ 如來藏 as a separate entity appears in 1.1 (是如來藏無所染), 3B (彼如來藏處), 5B (一切有情具如來藏), 6B (煩惱藏中有如來藏性) and 8B (一一有情有如來界具如來藏). The following cases could at first sight be understood as “... [to see that] all sentient beings [are] stores of a tathāgata”: 0M: 見一切有情如來藏, 1A: 觀察一切有情如來藏, 1B: 一切有情如來藏常住不變, 9B: 見一切有情如來藏. Only an examination of other passages, similar in syntax, shows that the grammatical function of 如來藏 cannot be that of a predicate to 有情 and that the expression must consequently be translated as: “tathāgata-store [*offin*] sentient beings.” That this is the right interpretation becomes clear from the following passages: 0M: 見一切有情欲瞋癡貪無明煩惱; 6A: 見一切有情欲瞋癡貪無明煩惱. These are the only other examples with a syntactic structure equivalent to the one above. It is obvious that the defilements cannot be construed as the predicates of sentient beings. On the other hand, we find the following pāda in 4.3: 知彼煩惱爲客塵: “knowing that those defilements [are] accidental.” From this we can infer that Amoghavajra would probably have employed the character 爲 in the instances above also, if he had intended to use the term 如來藏 as a predicate to sentient beings.

¹⁰ Namely in 0M, 2A, 2.2, 3.3, 4.3, 4.4, 6.3, 7.4, 7.5 and 9.3. The passages in 1B (但彼衆生煩惱覆故, 如來出世...) and in 7.3 (我天眼亦然 觀彼衆生類 惡業煩惱纏) suggest that living beings are encased in defilements.

¹¹ Passages where the buddha-nature is mentioned as wrapped in defilements are 2.2, 3.3, 7.4 and 7.5. The defilements are said to cover living beings in 0M, 1B (*Bth* and *Tib* unclear), 2A, 4.3 and 7.3.

¹² I am not counting the appearances in association with the names of bodhisattvas or with the four bodhisattvas who did not attain awakening in section 11. Among the 34 cases above, the term is 4 times part of an interpolation in *TGS*₂ not found in *Ch*₁.

Perfectly Awakened One,” *Ch₁* paraphrases it as 成等正覺, 爲最正覺 or 受淨一切智.¹³

- g. The term *sattvadhātu* and the definition of *sattva* is not found in *Ch₁* in 6B. In addition, the verses in chapter 4 of *Ch₁* lack the term (*citta*)*prakṛti* – *āgantukakleśa*, a concept characteristic of the *tathāgatagarbha* teaching.

It is common in both Chinese translations that 如來藏 is understood to be a separate entity found in living beings (b). Leaving aside the question why the word *zang* 藏 was chosen to render Skt. *garbha*,¹⁴ this is nevertheless surprising, since 如來藏 could easily be applied as a predicate of living beings, in the sense of living beings *being* the stores of a *tathāgata*. It seems that already at the time of Buddhahadra’s translation the general idea of *tathāgatagarbha* as an entity within living beings was so prevalent that Buddhahadra or his collaborators decided—even against the evidence of the *sūtra* itself—to accept it for their translation into Chinese. This feature thus arose in the translational act and is not related to the Sanskrit text.

It is impossible to say to what extent feature a, the continuous use of the compound 如來藏 throughout *Ch₁*, is also due to Buddhahadra’s preference for this term.¹⁵ The fact that Amoghavajra also uses the term more often than the Tibetan translation does suggest that one reason for its prominence could be the wider range of its applicability once interpreted as a separate entity: whereas the term in the Sanskrit was only applied as a *bahuvrīhi* relating to sentient beings, the Chinese now had the chance to replace other terms designating the buddha-nature in living beings with it. It could at the same time acknowledge the possible “popularity” of the term, which, after all, formed the *sūtra*’s title. The Tibetans, favoring a literal translation, refrained from an abundant use of the compound and, in this instance, probably faithfully followed the Indian text. It is, however, true that I cannot completely exclude the possibility that the Indian *TGS₁* had already taken the term *tathāgatagarbha* in the same sense as seen in *Ch₁*, and that it appeared more often in it than in *TGS₂*. Whatever the case, a development from the usage of a variety of designations for the buddha-nature towards the standardized term 如來藏 is definitely a more plausible assumption than the other way round. Speaking in text-historical terms, *Ch₁* in this instance is a recension further removed from a common Indian original than *TGS₂*.

As I will show below, the term *dharmatā* in the *TGS* is used in at least two different meanings.¹⁶ In the passage where Buddhahadra employs the translation 法爾 *dharmatā* means “the *rule* to which all *dharmas* are subject.” It is the only passage in all of *TGS₁* with *dharmatā* in this meaning, and I suspect that

¹³ In 9B (the passage concerned is not found in *Ch₁* in its entirety).

¹⁴ Regarding this question, see Hiraoka 1990: 73ff. There it is left open whether Buddhahadra adopted an earlier translation (佛藏) or created one on his own (p. 76). One crucial impact on the rendering of *tathāgatagarbha* with *rulai zang* 如來藏 (indicating an element in living beings) may have had the concept of “five internal organs” *wu zang* 五藏 in traditional Chinese medical theory. Medical works such as the *Suwen* 素問 and the *Lingshu* 靈樞 are familiar with this concept, and it must therefore have been in use as early as the Han 漢 dynasty (see ‘Zhong Yi Dacidian’ Bianji Weiyuanhui «中医大辞典»编辑委员会 (ed.), *Zhong yi dacidian: Jichu lilun fenben* 中医大辞典: 基础理论分册, Peking: Renming Weisheng, 1982, pp. 42; 74ff.).

¹⁵ Takasaki (1974: 53) even calls the use of the term 如來藏 by Buddhahadra “excessive.”

¹⁶ The term is also employed in the parallel verses in *RGV* I.100: *vilokya tadvat sugataḥ svadharmatām avīcisaṁstheṣv api...*

Buddhabhadra in his translation chose the characters 法爾 in order to make clear that here *dharmatā* should be understood in its “weak” meaning of “general rule.” For him, *dharmatā* expressed with the characters 法性 likely implied the sense of “absolute truth” (see below). This may have led him to refrain from the use of 法性 in the other passages. The meaning of *dharmatā* in *TGS*₂, except in the passage just mentioned and in another case (see below), is probably simply that of the “nature” of a tathāgata. Hence Buddhabhadra probably felt that the characters 法性 went too far. He therefore avoided the translation 法性 and employed other terms specific to the *TGS*, such as 如來藏, instead.¹⁷

Feature c arises from the fact that in most cases *Ch*₁ states that the buddha-nature (and not living beings) is wrapped in defilements. This is in line with the corresponding verses of the *Ratnagotravibhāga*, where living beings are only once described as covered by defilements.¹⁸ Of course, a “correct” allegorical interpretation would tend to require that the buddha-nature, as counterpart of the tathāgata-bodies in the lotuses, be taken as the element covered by defilements rather than living beings themselves. However, no statement can be made in this regard about the degree of “correctness” of the Indian archetype of the *TGS*.

In regard to the replacements for the term “bodhisattva” with less specific terms (e), further text-historical research needs to be done on Mahāyāna sūtra literature in order to establish a comprehensive frame of possible general tendencies in the transmissional history of this genre.¹⁹ The less frequent use of the epithets “Tathāgata, Honorable One and Perfectly Awakened One” in *Ch*₁ (f) probably has its origins in Buddhabhadra’s concise style, and cannot help in reaching conclusions about the relation to the Indian recensions.

Finally, the occurrence of the terms *sattvadhātu* and (*citta*)*prakṛti**āgantukakleśa*²⁰ only in *TGS*₂ (g) could point to a later addition. The terms are well known for their prominent position within the *tathāgatagarbha* theory, and for this reason it is hardly imaginable that such key words would be dropped in the process of redaction or translation. On the other hand, as *Ch*₁ tends to standardize to a certain extent, this cannot be maintained without restriction.

This discussion of the unique features of *Ch*₁ reveals the problems in assessing this translation and its relation to *TGS*₂. We simply cannot know if it is the translator (and his team) or an earlier redaction of the text in India that was responsible for the differences. Moreover, it is very likely that the work of Buddhabhadra itself was exposed to a redaction by Chinese specialists immediately after its completion, in the process of which many passages could have been made to conform to basic rules of logic or to demands for a more

¹⁷ That 法性 and other related terms suggesting aspects of absoluteness were in fact vividly discussed in the period in which Buddhabhadra was active we can see from the documentation of the different views of Kumārajīva and Huiyuan 慧遠 on this subject in Ren 1985: 694–701.

¹⁸ See *RGV* I.101: *rāgadveṣamalādikośanivṛtam ... jagat*. The buddha-nature as enclosed in defilements is found in I.106, 107, 110, 111, 116, 119 and 120.

¹⁹ For one example of this kind, see Shimoda 1997: 171ff. For the Mahāyānist *Mahāparinirvāṇasūtra* he shows that the word “bodhisattva” is consistently used only in certain sections of the text. Further, he observes that a “bodhisattvaization in terminology” appears at three levels of intensification depending on the different versions, i.e., from the first Chinese translation (416–418 CE) by Faxian 法顯 to the Tibetan translation, and finally the second Chinese translation by *Dharmakṣema (also first quarter of the fifth century, but much longer than the translation by Faxian) with the highest number of appearances of the term “bodhisattva.”

²⁰ See I.125 for similar terminology in the verses of the *TGS* reproduced in the *RGV*.

appealing Chinese style.²¹ Other translations bearing the name of Buddhahadra, ones for which the Sanskrit is available, suggest that they have been done very carefully, more or less literally following the Sanskrit and rarely containing elements introduced through the translator's peculiar way of understanding the text.²² However, even if translations bear the name of Buddhahadra, can we be sure that he cooperated always with the same Chinese scholar-monks who were in charge of the redaction of his work? Should we not expect that his coworkers were chosen according to the importance of the text and that the outcome, for a large part, exhibits their own personal style?²³

If we nevertheless assume that the redactional impact of the translation activities was only minimal, would it be possible to explain some of the differences over against *TGS*₂ as the features of an orally transmitted text? Indeed, a memorized text would naturally tend to be smoothed down in the process of unconsciously adapting content and structure of the various passages to the main line of thought and reoccurring patterns. From this we could explain why in several passages *Ch*₁ does not lose its thread, whereas the versions of *TGS*₂, in several passages, seem to be altogether inconsistent. Also, the reason for the frequent occurrences of the compound 如來藏 could be found here, since one can assume that the central term of the sūtra, and a constituent part of its title, crept into passages and replaced other designations of the buddha-nature. On the other hand, one could easily argue in the opposite direction, namely that a memorized text would hardly allow for alterations to the degree documented in *TGS*₁, since once memorized, the text would attain a more or less fixed form. Though I do not want to exclude the possibility that changes in the sūtra were caused by an oral tradition, I rather tend to look for the reason for the origination of *TGS*₁ in the Chinese redaction of the text by Buddhahadra and his coworkers.

Regarding the relation of *Ch*₁ to *TGS*₂, it is obvious that *Ch*₁ represents an earlier stage of textual development of the *TGS* as far as the interpolated passages mentioned above are concerned. I am hesitant to claim that this kind of relation is valid for the parts contained in both recensions which are different in structure, terminology and length. These differences do not seem to be the result of a consistent redactional approach, and the wording in neither recension can be said with certainty to be earlier and more original than that in the other. It is thus

²¹ An analysis of the *Chu sanzang ji ji* 出三藏記集 (compiled ca 515 CE) shows that, in general, the teams dealing with the translation were composed of three specialists: the main “translator” and reciter, the actual translator (if the reciter's Chinese was not sufficient), and one or more redactors. See Zacchetti 1996: 350–52; and also Boucher 2001: 104ff. along with the works he provides in n. 35. Zacchetti further points out that, while in the case of the *Mahāparinirvāṇasūtra* (417 CE) Buddhahadra was supported in his activity by the frequently mentioned translator Baoyun 寶雲, only a short time later, when he translated the *Buddhāvataṃsakasūtra*, Baoyun was no longer mentioned (pp. 353–355). I am not sure if one should follow Zacchetti in his opinion that this must mean that Buddhahadra had gained enough knowledge of Chinese to translate without help (p. 355).

²² This holds true for Buddhahadra's translation of a part of the *TUSN*—the Sanskrit of which we know as a quotation in the *RGV* (22.10–24.8). The date of the translation of the *TGS* (beginning of the fifth century) falls within the period of Buddhahadra's translation of the *Buddhāvataṃsakasūtra*, of which the *TUSN* is a part (418–420 CE; see *DZJ* s.v. 大方廣華嚴經).

²³ Zacchetti notes that the central function of the main translator was to recite and interpret the text, whereas the translational work itself was mostly done by the actual translator of the team. From the Buddhist point of view, he argues, the translation would nevertheless be attributed to the reciter, because he was the one familiar with the tradition of Indian thought (pp. 358f.).

impossible to plausibly determine the stemmatic relation between *TGS₁* and *TGS₂*; we are forced to treat them as two recensions, each with a transmissional history of its own. While *TGS₁* is the stylistically more concise and consistent recension of the *TGS*, *TGS₂* has interpolated several textual additions typical of Mahāyāna sūtra literature and, as might be suspected from the inconsistencies found in all three of its representatives, looks back on a manuscript tradition in India which, in several passages, harbored problematic readings.

Judging from the date of translation as the *terminus ante quem* of the two recensions, there is a gap of more than 350 years between them. In the following I will show that *TGS₂*, or a version very close to it, already existed before the middle of the fifth century, so that it can be placed much closer to the period in which *TGS₁* was translated. We therefore need to focus on the reproduction of the nine similes of the *TGS* in the *Ratnagoṭravibhāga*. The following points deserve our attention:

- In the second simile of the *Ratnagoṭravibhāga* it is twice said that the honey-hunter desires honey: *puruṣas tadarthī* (I. 102b), *madhvarthī* (I.104b). This characterization also appears in *TGS₂* in 2A and 2.1, but is missing in *Ch₁*.
- The fourth simile in recension *TGS₂* deals with the gold nugget of a traveler which falls into putrid excrement. (The man is mentioned in 4A and 4.1.) The *Ratnagoṭravibhāga* also tells of this traveler: *suvarṇam vrajato narasya* (I.108a). *Ch₁*, however, just tells of gold fallen into an impure place without any mention of the traveler.
- In the sixth simile the *Ratnagoṭravibhāga* mentions the fruit of “mango trees, palmyra palms and other trees”: *āmratalādiphale* (I.115a), *tālaphalāmra-* (I.117b). A sequence of four kinds of fruit is found in 6A of *TGS₂*: that of a mango tree, rose apple tree, palmyra palm and cane (in the verses the mangos are missing). *Ch₁*, on the other hand, mentions both in the prose and the verses only the fruit of mango trees.
- In 7B of *TGS₂* it is explicitly stated that the buddha-nature is also found in animals. The same statement appears in I.119c (*tiryakṣv api*) and I.120 (*tiryakṣv api*) of the *Ratnagoṭravibhāga*. Further, a quotation-like passage, which could well derive from *TGS₂*, appears in *Ratnagoṭravibhāgavyākhyā* 15.11f. (see the note in 7B of my translation). The passages regarding animals do not appear in *Ch₁*.
- In all three sections of the eighth simile of *TGS₂* a poorhouse is mentioned as the residence of a depressed woman. This poorhouse also turns up in all three corresponding verses of the *Ratnagoṭravibhāga*: *anāthāvasathe* (I.121b), *anāthasāle* (I.122a), *anāthaveśmani* (I.123b). *Ch₁* does not mention the woman’s residence.
- The citation of *TGS* 8B.3–4 concerning *tathāgatadhātu* found in *Ratnagoṭravibhāgavyākhyā* 72.11–12 agrees closely with the passages in *Tib*, *Bth* and *Ch₂*. (See the note in my translation for a more detailed comparison.)

These examples show that the compilers of the *Ratnagoṭravibhāga*(*vyākhyā*) must have known recension *TGS₂* or a version similar to it. How otherwise could the *Ratnagoṭravibhāga* share passages with *TGS₂* in its corresponding verse or prose sections? The date of the translation of the *Ratnagoṭravibhāga*(*vyākhyā*) into

Chinese is 511 CE.²⁴ As Takasaki (1966) and Schmithausen (1971) have shown, the *Ratnagoṭravibhāga(vyākhyā)* consists of at least two clearly different layers, namely the original *kārikās* and a commentary written in verses and prose. The recomposition of the nine similes of the *TGS* in the *Ratnagoṭravibhāga* is part of the oldest layer of the *Ratnagoṭravibhāga(vyākhyā)*. The reproduced verses are written in complex meters, and it is hardly imaginable that alterations to the original wording of the *Ratnagoṭravibhāga* could have been introduced at a later stage. Now, we have to reckon with a complex history, from the time of the first appearance of recension *TGS*₂, the reformulation of its verses and their adaptation to the *kārikās* in the *Ratnagoṭravibhāga*, the completion of one, if not two, commentarial layers to the *Ratnagoṭravibhāga* (part of which clearly follows a different interpretation) until, finally, the translation of the whole *Ratnagoṭravibhāga(vyākhyā)* into Chinese in 511 CE. In view especially of the different exegetical approach to the *kārikās* taken by the commentary, but also the various steps involved in the whole process, I suppose that we can assume a period of at least fifty to one hundred years between the first appearance of *TGS*₂ and the final Chinese translation of the *Ratnagoṭravibhāga(vyākhyā)*. This, however, would place the *terminus ante quem* of *TGS*₂ more or less within the same period as *TGS*₁. Based on the date of the translation of the *Ratnagoṭravibhāga(vyākhyā)*, therefore, we no longer have any reason to consider *Ch*₁ to be an older recension of the *TGS*.²⁵

1.2 The Representatives of *TGS*₂

Bth, *Tib* and *Ch*₂ doubtlessly derive from the same manuscript tradition. They differ from each other only in some minor points, which, for the most part, can easily be explained as resulting from misreadings or misunderstandings of words or passages, redactional intervention or passages already unclear in the Indian manuscripts.²⁶ As one might expect, each of the three translations has abundant variants not found in the two other texts. These “single variants” may have their origin in the respective Indian manuscript, faithfully translated into the new language, or in the translation process itself.

As I have repeatedly stated in the notes to my translation, it seems that *Tib* was subject to some process of redaction at the time of its translation or after. I can show in many instances the reasons for such alterations.²⁷ The most obvious documentation of this process is a comparison of the *pāda* sequence in the verses

²⁴ Here I do not consider the relation of the *RGV* to other texts (such as the *MSA*) and the associated implications for the dating of the *RGV*. I shall deal with this matter in section 4.4.

²⁵ See section 4.4 where, based on other arguments, I arrive at a *terminus ante quem* of ca 350 CE for the composition of *TGS*₂. Whether the obvious interpolations found in *TGS*₂ were at that time already part of *TGS*₂ cannot be decided, since they do not form part of the central message of the *sūtra* and can thus hardly be expected to be cited in the *RGV(V)*.

²⁶ Section 6B is a good example: each of the three versions offers its own way of reading the passage without being completely convincing.

²⁷ The fact that the translators or redactors of *Tib* deviated in some instances from the Indian text could, for example, be the reason for the different rendering of 8B.3–4, which has come down to us in Sanskrit from a quotation in *RGVV* 72.11–12 (see the note in my translation). There, Skt. *utpanna* is rendered as *zhugs*, and *dhātu* is rendered as *rigs* (usually: *gotra* or *kula*). The translation *zhugs* for *utpanna* is not a common one. Similarly, the preference for *rigs* over *khams* may reflect the choice of the translators/redactors.

of the different versions (see Appendix B): in 26 of the 69 verses, *Tib* has a sequence different from the one common to *Bth* and *Ch*₂. Two main reasons for the alterations in *Tib* are evident. In 14 instances the pāda containing the verb, which governs the whole verse, has been placed at the end of the verse. In 10 cases the editors of *Tib* felt the need to position pādas embracing relative clauses or other specifying elements before the element to be specified. In several instances, the different arrangement of the syntactical units led to a new understanding of the content.

In the prose section, such alterations are not always so easy to determine. If there was reason to assume that redactional intervention has led to a reading only attested by *Tib*, I have always indicated this in the notes to my translation. However, *Tib* is a smooth, well-polished text with a more or less easy flow of sentences. Its terminology accords in almost all instances with the *Mahāvvyutpatti*. Precisely because of these characteristics, we should be careful not to follow its argumentation uncritically in the effort to uncover the original content of *TGS*₂.

Regarding *Bth*, we have reason to characterize it as a translation dating from a time when the standard Buddhist vocabulary was not yet established in Tibet, namely up to the eighth century, after which translation activities became more organized and standardized with the aid of compilations of compendiums like the *Mahāvvyutpatti* or the *sGra sbyor bam po gnyis pa*. As I have shown elsewhere,²⁸ a comparison of the terminology chosen by the translators of *Bth* with the corresponding terms in *Tib* reveals that in most of the cases the terminology of *Bth* is not in line with the *Mahāvvyutpatti*. In *Bth*, a tendency to a more literal and less idiomatic style of translation seems to prevail. Whereas many of the verses in *Tib* have been rearranged according to the basic needs of the Tibetan syntax (see above), in *Bth* the pāda sequence seems to reflect, if not wholly coincide with, the Sanskrit original, where the main verb of the sentence may not have been positioned at the end. Other refinements typical of the time after the appearance of compendiums like the *Mahāvvyutpatti* or the *sGra sbyor bam po gnyis pa* are lacking in *Bth*: verbs in many cases do not indicate the hierarchic level of the subjects involved;²⁹ the particle *dag* expressing collectivity is less commonly employed;³⁰ numbers appear which are not in their “Tibetanized” forms.³¹ Furthermore, the fact that some of the names of the *arhats*, translated in *Tib*, are transliterated in *Bth* (cf. 0C) also marks *Bth* as the earlier work, written when many of the (later) standard translations of *arhat* names had not yet been established.³²

For the prose, it is more difficult to judge how far *Bth* follows the syntax of the Indian original. Verbs are always placed at the end of the sentence. In the case of names, *Bth* clearly follows the Sanskrit, where the name usually proceeds titles, as in *Bth*: *rDorje'i blo gros byang chub sems dpa' sems dpa' chen po* against *Tib*: *byang chub sems dpa' sems dpa' chen po rDo rje'i blo gros* for Skt.

²⁸ See Zimmermann 1998: 43–46.

²⁹ Ibid., 47, n. 25.

³⁰ Ibid., 47, n. 26.

³¹ *Bth* throughout uses *brgya stong* instead of *'bum* for *śatasahasra*.

³² The situation is similar to the employment of the auxiliary verb *'os pa* to express what are gerundives in Sanskrit: in all 18 cases of its appearance in *Tib* it is missing in *Bth*. See Simonsson 1957: 156f. for an example where *phyag 'tshal* in the old version of the *SP* is rendered as *phyag byar 'os* in the revised text (for Skt. *vandanīya*). The auxiliary verb *'os pa* seems at some point to have become the standard for rendering gerundives from Sanskrit.

Vajramatir bodhisattvo mahāsattvaḥ. This principle is also found in the old translation of the *Saddharmapuṇḍarīkasūtra* (see Simonsson 1957: 173f.) and, in the case of the *Akṣayamatīnirdeśasūtra*, in the version closest to the Dunhuang fragments as well as in the Dunhuang fragments themselves (cf. Braarvig 1993a: ix). In most of the direct speeches, *Bth* places the verb of speech before the content of the speech, a feature common to the Sanskrit but not attested for *Tib*, where this verb is always found at the end of the speech.

Generally, the style of *Bth* is more prolix and in parts unintelligible, features whose reason may have been that the translators felt uneasy about departing from the original Indian syntax. In some passages this could have led them—faithfully following the (faulty?) Indian text—to place syntactical units one after the other without the least attempt to achieve the necessary consistency and continuity of discourse by introducing connective elements into the Tibetan.

There can be no doubt that Amoghavajra also tried to keep as close as possible to the Indian text. The Sanskrit on which his translation is based must have been largely identical with the Sanskrit from which the Tibetan translations derived. It seems that he followed the Indian text more or less word for word, avoiding any kind of interpretative translations. Even in the syntax, he remains loyal to the Sanskrit: the pāda order is for the most part untouched. The sequence of syntactical units in some passages, at odds with Chinese grammar, is most likely also modeled on the Sanskrit. Amoghavajra’s translation style thus again seems to be based on the idea that the single elements of the Indian text should remain discernible and be arranged in the order found in it.

However, as already mentioned above, Amoghavajra takes the term *tathāgatagarbha* (如來藏) as a designation for the buddha-nature itself, that is, as a separate entity within living beings. Further on throughout the text, we find a number of additional or substitutional elements of an explicative nature which could well be commentarial units of the translator that crept into the translation:

- In OG the flowers in the sky are described as “being united with each other as a whole” (共相合成). The *tathāgatas* are said to be endowed with the *dvātrīṣan-mahāpuruṣa-lakṣaṇas*. Neither element is found in the other translations.
- 0M: Besides gods and humans in the list of living beings that pay reverence to the *tathāgatas* in lotuses, mention is also made of dragons (for *nāgas*), *yakṣas*, *gandharvas*, *asuras*, *garuḍas*, *kiṃnaras*, *mahoragas*, *amanuṣyas* “and others.”
- In the last pāda of 1.5, instead of the purification of living beings as the motive for teaching the Dharma, it is stated that sentient beings may thereby attain the three bodies endowed with buddha-knowledge (令得三身具佛智).
- In 3B, between the statements that buddhahood is found in all living beings and that the *tathāgata* removes their defilements from them, the following insertion is found: 若能悟解，則成正覺，堅固安住自然之智。 One possible translation is: “If [one] can (= has the potential to?) awaken, [one] will become a perfectly awakened [one], settled firmly [and] peacefully in spontaneous knowledge.”

1.3 Similarities between the Chinese Translations

One surprising feature is the fact that in several cases *Ch*₂ lines up with *Ch*₁ against both Tibetan translations. The nature of the differences shows that it is not the wider Chinese context in which *Ch*₁ and *Ch*₂ are embedded (or the Tibetan context for the Tibetan translations) that could be held responsible for this. Some of these common differences are:

- Only the two Chinese recensions characterize the withering of the flowers in the introduction and the first simile as taking place “in an instant” (0H, 0I, 0J, 0M). Also, in 7A the death of the man in the wilderness is described as “sudden.”
- Both *Ch*₁ and *Ch*₂ do not mention the “petals and stalks” of the flowers in the description in 0I. Later, in verse 0.3, the stalks are again not mentioned in either Chinese translation, while the petals are missing only in *Ch*₁.
- In 0J, *Ch*₁ and *Ch*₂ do not mention the putrid smell of the flowers.
- In the enumeration of *buddhadharmas* in 5A, *Ch*₁ and *Ch*₂ lack the *āveṇikabuddhadharmas*.
- 6A: The problematic expression *'jig rten (na) gnas pa (Tib)* and *'jig rten zhugs shing gnas pa (Bth)* in the Tibetan has no counterpart in the Chinese.
- In verse 10.1 only the Tibetan translations mention *explaining* the *TGS* among several other methods of propagating it.
- In 11C both Chinese recensions additionally mention the attainment of the five *abhijñās* (五神通) by those being touched by the light of the bodhisattva *Sadāpramuktaraśmi. The Tibetan is restricted to the attainment of the incapability of turning back from supreme and perfect awakening (*avaivartikā anuttarāyāṃ samyaksambodhau*).
- Instead of the problematic *'di 'dra (Tib)* or *de 'dra (Bth)* in verse 11.1, the Chinese has 常 (“continuously”).

Up to now, I have no firm idea how to explain these common points in the Chinese. If we do not want to assume that Amoghavajra, to whom Buddhahadra’s translation was certainly known and probably accessible, adopted some of the common points from the fifth-century translation, we need to reckon with the possibility that at least the cases where elements are missing in the Chinese came into existence coincidentally.

1.4 Structure, Contents and Textual History of the *TGS*

The *TGS* is clearly dividable into seven main sections:

- I. (0) The setting in Rājagṛha, including the manifestation of supernatural phenomena
- II. (1–9) The nine similes: the actual *TGS*
- III. (10) The description of merit resulting from the propagation of the *TGS*
- IV. (11) The story of *Sadāpramuktaraśmi and *Anantaraśmi
- V. (12A–B) The question of Ānanda
- VI. (12C) Homage to the one who holds the *TGS* in one’s hands

VII. (12D) Description of the delight and praise on the part of the onlookers
(return to the scene of 0)

Without a doubt, the nine similes form the essential part of the *TGS*. Not only is the title of the sūtra derived from the description in the first simile, but the text itself also regards the nine similes as the actual *TGS*: in sections 0 and 10–12 the *TGS* is frequently referred to. This sūtra within a sūtra, the nine similes, is narrated by the Buddha himself. It is this section alone which is usually dealt with by later commentators. The nine similes contain the new message and the doctrinally relevant passages for which the *TGS* is known. They are enclosed by a frame (0 and 12D) which is common to most, if not all, sūtras of the Mahāyāna. Between the similes and the end scene, three more units are found (10, 11, 12A–C). Whereas the description of the merit resulting from the propagation of the *TGS* is a common element in many other sūtras, the story of *Sadāpramuktaraśmi and the (probably later interpolated) question of Ānanda seem peculiar to the *TGS*. Later we will have to face the question what their relation to the similes might be.

As mentioned above, the main speaker after the introductory description is the historical Buddha himself, who is interrupted only by the two questions of Vajramati and Ānanda, his narration ending with a return to the setting. The text is in prose, with verse portions that repeat, usually at the end of a short unit, the main issues contained in prose before.³³ This structure of verses ending a prose section is well attested in many other Mahāyāna sūtras.

At first glance, the introductory section 0 and the following exposition of all nine similes seem to be from one mold. The Buddha narrates in the third person, with his thoughts interspersed in the first person. The descriptions in the similes are all vivid and concrete. The similes appear to be constructed in a unified fashion. They all start with the description of a more or less well-known occurrence or process met with in daily life (with the exception of the lotus flowers in the sky), and then draw a comparison between it and the spiritual sphere. At the end, the prime role of the Tathāgata is illustrated as that of teaching living beings about their unknown potential. From a doctrinal point of view, too, there seems to be no reason to assume that the similes are not the creation of a single author or group of authors put forward as a monolithic block. Nevertheless, an analytic examination of the first simile leads to several observations which clearly go against the assumption that the introduction and the nine similes had already been arranged in their present form at the very beginning.

The most obvious manifestation of textual heterogeneity is the first simile itself. After his announcement that he would expound the *TGS*, in 0M the Buddha sets about formulating the first simile, which, regarding the *upamāna*, that is, the part of the simile used to illustrate the subject matter, is taken from the setting of the introductory section. Then, in 1A, he abruptly starts again to recount this first simile, this time with emphasis on different elements. A close look at both “versions” of this first simile, that is to say, version 0M and version 1A, reveals the following differences:

- (1) In 0M, the *upamāna* is very close to the description in the introductory setting: The lotuses are mentioned as supernatural creations of the Tathāgata;

³³ The fact that the section with the question of Ānanda does not end with verses repeating his question is one sign that it is most probably not a part of the oldest Indian recension of the *TGS*.

the tathāgatas sitting in their center emit rays of light; the spectators recognize the tathāgatas and pay homage (without mentioning the divine vision); the flowers are, as stated in the introduction, open.

This is all in contrast to 1A: there nothing is said about light effects, a central element of the introductory part; the flowers are not explicitly characterized as supernatural manifestations of the Buddha; no spectators and their act of homage are mentioned; instead, there appears a person endowed with divine vision who “desires to look at the forms of the tathāgatas.” This last expression is reminiscent of simile 2, where the honey-hunter is described as “desirous of honey” (2A; 2.1), and of simile 3, where men and women want to remove the kernels from their husks because they desire to obtain edible food (3A). Further, the person in 1A is in need of a divine vision to see the tathāgatas in the middle of the flowers because they are “not blooming and not open.”

- (2) In contrast to the introduction and to 0M, in 1A the person with divine vision then removes the disgusting petals of the lotuses and cleans the tathāgatas sitting inside. The process of purification in the *upamāna* is a completely new element not found in the sections preceding 1A but common in the other similes.
- (3) Regarding the *upameya*, that is, the subject matter to be illustrated in the simile, in both 0M and 1A the term *tathāgatagarbha* appears. However, the sentence containing the term in 0M is found at the end of the chapter and is, furthermore, missing in *Ch₁*. I consider it to be a later addition in *TGS₂*. This seems to be supported by the uncommon position of the sentence: the act of perceiving the buddhas within living beings had already been dealt with before. Meanwhile the Buddha had been stressing the equality between the tathāgatas within and himself. Why should he again mention the act of perceiving? Further, the whole of the sentence, as it is found in the Tibetan, seems very uncommon and strange in the context of the *TGS*, the *tathāgatacakṣus* (“tathāgata-vision”) being characterized as **prāsādika* (*mdzes pa*; in my translation rendered as “admirable”), a term usually applied to persons.³⁴ A plausible reason for interpolating the passage may have been the wish to use the central term *tathāgatagarbha*, which until this passage had not come up in 0M.
- (4) The simile in 1A ends with the statement that living beings realize buddhahood. How, then, are we to deal with chapter 1B? 1B starts with the paradigmatic statement that the Essential Law (*dharmatā*) of all *dharmas* consists in the fact that all living beings are *tathāgatagarbha*. It is this statement which has been cited word for word by the *Ratnagoṭravibhāga-vyākhyā*. Bu ston, in his *mDzes rgyan*, quotes from the beginning of 1A till the end of this passage. The text in the *TGS*, however, goes on to state that the Tathāgata teaches the bodhisattvas, that the bodhisattvas thereupon follow his teachings, and that they finally realize buddhahood and perform the tasks of a buddha for other living beings. All this is repetitive since it is already stated in 1A that, having accepted the Buddha’s teaching, the “tathāgatas of living beings are established in perfection,” which can only be understood as the

³⁴ See *BHSD* s.v. *prāsādika*.

attainment of buddhahood.

The structure of the passage extending from 0M till 1B, however, is seen in a completely different and plausible way once we read through it without the last (interpolated) sentence in 0M, without the whole of 1A, and without the categorical statement at the beginning of 1B. The “repetitive part” in 1B thus becomes the natural continuation of the narration from 0M: After the Tathāgata has confirmed the equality of the buddhas within living beings with himself in 0M, in 1B he then decides to teach the Dharma to the bodhisattvas. The bodhisattvas “apply themselves” to his teaching and finally become buddhas. The simile begun in 0M is thus expanded on logically and is rounded off at the end of 1B. The paradigmatic statement at the beginning of 1B, on the other hand, is not part of the simile. As a part of simile 1A, it may have served the function of a summarizing formula which repeats the foregoing in traditional words.

- (5) Finally, I shall deal with the five verses following the prose passage. Section 1.1 shows a close affinity with 1A. The verse describes the flowers as “not opened” and mentions the person with divine vision. In the second verse the purifying activity takes place on the *upamāna* level (missing in 0M). The following three verses, too, follow clearly the narrative in 1A. They close with the establishment of the buddha-bodies (in the perfection of the tathāgatas), a parallel to the last sentence in 1A. There can be no doubt that the verses represent the simile as it is found in 1A. The categorical statement at the beginning of 1B is not reflected in them.

The above analysis leads to the following results: In sections 0M to 1C two lotus similes have been combined. One is found in 1A (and possibly also the first sentence of 1B) and the verses of 1C; the other one comprises chapters 0M (without the last sentence containing the term *tathāgatagarbha*, which is probably a later insertion) and 1B (without the first sentence). The term *tathāgatagarbha* is thus only found in simile 1A. Simile 0M draws upon the introductory setting described from 0G to 0K. Simile 1A, on the other hand, clearly follows the other eight illustrations of the *TGS*³⁵ and, with the introduction of a person with divine vision, adapts the *upamāna* to the *upameya*, where the Buddha recognizes the buddha-nature of living beings with his buddha-vision. In terms of the homogeneity of the two parts of the simile, 1A thus proves superior, since it aligns the lotus imagery smoothly with the idea of the hidden buddha-nature of living beings which needs to be set free.

Concerning the conformity of simile 0M to the introduction, I have stated that they mesh: no supernatural vision is necessary since the flowers are open. There are, however, some phraseological inconsistencies between the two sections. In all the descriptions of the buddhas seated in the calyxes up to 0J, *Tib* employs the term *sku* (Skt. *kāya*, *ātmabhāva* or the like) when referring to the buddhas in the lotuses. Then, from 0M onwards, the terminology in *Tib* shifts suddenly to *gzugs* (Skt. *rūpa*?). Though *Bth* consistently employs *sku*, this change is confirmed by *Ch*₂, in which the character 形 (for *rūpa*?) appears here for the first time in the text to designate the tathāgatas in the flowers. Parallel to this,

³⁵ Whilst simile 1A contains the introductory formula *rīgs kyi bu dag 'di lta ste dper na /* (Skt. **tadyathāpi nāma kulaputrāḥ*), which is the common formulation applied in all other eight similes, in 0M the introduction runs *rīgs kyi bu dag ji ltar*. (In *Bth*, however, the introductory formula in 0M is identical with the other similes: *rīgs kyi bu 'di lta ste*.)

again from 0M onwards, there is a different term to denote a very high number. Whereas up to 0J we find *koṭṭiniyutaśatasahasra*, from 0M onwards we find only *koṭṭisatasahasra*. Later, in the part following the similes, the former, longer expression is used again. Worth mentioning, too, is a change in the audience. In the chapters up to 0K the ones watching the supernatural manifestations are said to be “the whole multitude of bodhisattvas and the four assemblies” (0H; 0I), “the world with [its] gods, humans and *asuras*, all the bodhisattvas, and the four assemblies” (0J), or “myriads of living beings” (0J). In 0L, however, the Tathāgata answers merely to the “whole multitude of bodhisattvas,” while in the simile 0M itself only “gods and humans” are mentioned. Though such differences between the two sections are definitely minor in view of their homogeneity, they nevertheless indicate some unevenness. I will come back to this point later.

Concerning the textual history of the *TGS*, we are now confronted with a complex situation. The simile of the lotus occupies, no doubt, a special position among the nine similes. The fantastic description of lotus flowers rising to the sky marks a contrast with the realistic spirit of the other eight illustrations. I can hardly imagine a reason for its inclusion among the set of eight others than the need to build a bridge to the lotus scenery of the beginning which, for whatever reason, had been chosen to introduce the similes.

We do not know how the Mahāyāna sūtras came into existence. Any discussion would soon become very speculative and go far beyond the limits of this work. However, it is reasonable to suppose two separate parts, namely the eight similes and the lotus scenery of the introduction, which originally existed independently of each other. To assume anything else would make it difficult to account for the differences in the basic conception between the introduction and the eight similes (supernatural vision, unopened flowers etc.). If the introductory scenery had been composed especially for the eight similes, it could have been adapted perfectly to the needs of the similes. But, as I have shown above, this is not the case. I therefore conjecture that when looking for a relatively fitting setting for the eight similes, the compiler decided to arrange the description of the fading flowers (taken from a different context) into an introduction to the similes. But then he was forced to compose parts 0M and 1B (without the sentences including *tathāgatagarbha*) in order to explain plausibly the relation between the scenery and the eight similes, starting with the honey in the honeycomb. He tried to remain as faithful as possible to the lotus scenery but nevertheless unwillingly introduced the changes in phraseology discussed above (**kāya* for **rūpa* etc.). Most likely, this newly created first simile did not include a verse portion. The reason for this could lie in the fact that at this stage the other eight similes, too, existed only in prose, or that the first illustration was felt to be but an introductory bridge between the lotus scenery and the similes of the honey and the rest, rather than an independent simile with a corresponding verse section.

In a later step, simile 1A and the attendant verses would then have been interpolated. The compiler took great care to preserve the old lotus simile in its entirety and to insert the new simile in a position which would make it difficult to recognize any traces of such an insertion. The respect he paid to the old lotus simile by preserving all of 0M/1B makes it more difficult to argue that the same

compiler replaced a hypothetical old verse section with his new one. It is more likely, as suggested above, that the old simile had been without verses, or that it was at this stage that all similes became newly fitted out with a verse portion. This question cannot be answered wholly satisfactorily.

The insertion of 1A could have been caused by the advent of the term *tathāgatagarbha*, which till that insertion had not been used anywhere in the introduction and the similes. At the same time, the wish to transform the lotus simile into a “classically” structured one conforming to the style of the following similes (with homogeneous correspondences between *upameya* and *upamāna*, and including verses), and doing justice to the *tathāgatagarbha* concept, could have been one main factor at work. The compiler could thereby also compensate for the incompatibility between the introductory setting and the basic idea behind the eight similes: the missing person with divine vision representing the Tathāgata, the fact that the tathāgatas in the flowers are recognizable by everyone,³⁶ and the lack of the purifying activity.

The main reason, however, was probably the compiler’s wish to introduce the term *tathāgatagarbha*. We cannot be sure what exactly led to the eminence of the term. As long as we have no other early text which could have coined the term, we should assume that it developed in fact from the lotus image in the first stage of the *TGS*. We can even imagine that the author(s) of the incomplete *TGS* (without 1A) searched for a designation for their new idea of the buddha-nature, and possibly also for a title of the sūtra meant to expound their theory. Once they had discovered that the term *tathāgatagarbha* (with the rich nuances described below) could serve their needs well, they strove to give the term a place in the sūtra itself. This may have been their motivation for inserting chapter 1A (and probably also the first sentence of 1B: ... *dharmāṇām dharmatā* ...). 1A serves to provide a definition of the term *tathāgatagarbha*. This can still be felt in the first sentence when it is said “... recognize that there are tathāgatas sitting cross-legged in their center (**madhya*), in the calyx of [each] lotus (*padmagarbha*),...” My impression is that the author(s) here deliberately used the term *tathāgata* (and not **tathāgatarūpa* as later on) and that specifically in this passage they glossed *garbha* as **madhya* in order to draw readers’ attention to the meaning of the term *garbha* and its role in the compound *tathāgatagarbha*.

If my hypothesis is right, the textual history of the *TGS* can now be divided into at least three major steps: first, the composition of the eight similes; secondly, their combination with the introductory lotus scenery and the composition of the “old” lotus simile (0M; 1B); thirdly, the interpolation of the “new” lotus simile 1A with its verse section and the inclusion of the term *tathāgatagarbha* (and probably also the selection of the title for the sūtra).

The *upameya* of the “old” lotus simile (0M; 1B) deserves special attention. As it came into existence after the compilation of the other eight similes, and thus represents the essence of the different metaphorical approaches to the idea of a buddha-nature in living beings, it reflects what the author at this stage of the text’s development thought to be the underlying pattern of the *upameya*. Furthermore, it has the advantage of not being constrained by a dominant *upamāna*: the fantastic

³⁶ It is definitely possible to use the term *padmagarbha* in the case of a fully blossoming lotus. Even when flowering, the petals will not open completely, so that a kind of interior space (*garbha*) remains.

introductory lotus setting is formulated loosely enough to allow different kinds of construction for the *upameya*. It does not force the author to adapt the *upameya* to the requirements and the elements of a realistic *upamāna*. It is therefore probably no coincidence that we find here the most explicit formulation of the liberating path in the whole sūtra. The passage asserts that the Buddha teaches the bodhisattvas, that he incites their faith, and that the bodhisattvas, by applying themselves to his teachings, attain buddhahood. Though the activity of the bodhisattvas (or living beings) in their own process of liberation is sporadically delineated in some of the other similes (but on the whole seems to remain in the background), it is clear that at least for the person(s) who creatively combined the similes with the introduction, be they the authors of the similes or not, this active participation of the bodhisattvas was seen as a very important element.

If we now turn to the parts of the sūtra following the similes, it is difficult to avoid the impression that we again are dealing with more or less originally independent elements added to the similes for various reasons. Let us first have a short look at the content of these sections. The description of merit arising from the propagation of the sūtra (10) is a common theme in Mahāyāna literature. Though other methods of attaining merit, with which the sūtra-related activities are contrasted, can differ according to the text,³⁷ the propagation of the sūtra by preserving, reciting, copying and teaching it is very common. First, the *TGS* announces in a general way the positive result for one's merit from applying oneself to the propagation of the sūtra (10A). It goes on to illustrate this fact impressively by contrasting it with the meaningless production and donation of myriads of pavilions to myriads of buddhas and bodhisattvas or the bestowal of hundreds of thousands of flowers upon them for a hundred thousand *kalpas* (10B–C). It is even said that the internalization of a single simile of the *TGS* or the simple joyful approval (*anumodanā*) of what has been heard would by far outweigh the merit attained through such donations. This second idea of joyful approval leading to the accumulation of merit does not seem to be part of the common descriptions in other Mahāyāna sūtras but does appear in the *Saddharmapuṇḍarīkasūtra*. Rather than enter into a discussion of the complex issue of the veneration and propagation of a text, and its development and social meaning, I shall simply propose that the underlying tendency here is to redirect emphasis to the internalization of religious values. If we keep in mind that the propagation of the sūtra also encompasses its “understanding” and “explanation to others,” it is only natural that this process presupposes personal participation and reflection, elements which easily tend to be discarded during mainly external acts of veneration. The appearance of the term *anumodayati*, in the sense of cultivating an active and joyfully approving attitude towards the teaching, supports such a conclusion.

This section on merit might otherwise have been the end of the sūtra, which is the position it usually occupies in other texts, were it not for the fact that it is followed in the *TGS* by two other parts, with which I will now deal. The story of *Sadāpramuktaraśmi and *Anantaraśmi (11) was probably added to raise the authoritative status of the sūtra by embedding it in a quasi-historical context,

³⁷ As mentioned in the notes to my translation, a passage in the *KP* resembles the *TGS* most in this respect. *SP* 332.9ff. contrasts the hearing of the *SP* with the practice of the five *pāramitās* of *dāna*, *śīla*, *kṣānti*, *vīrya* and *dhyāna*. For the *RGV* see V.3–6, where the comparison is with only the three virtues of *dāna*, *śīla* and *dhyāna*.

which is at the same time the history of its transmission. The story itself may have been an independent entity before it became incorporated into the sūtra. It contains two connecting links with the core sūtra: one is the fact that the tathāgata *Sadāpramuktaraśmi taught the *TGS* for five hundred great cosmic cycles, in consequence of which the listeners finally attained awakening; the second is the identification of *Anantaraśmi, who had asked *Sadāpramuktaraśmi to teach, with the main representative of the audience, Vajramati. *Anantaraśmi together with three other well-known bodhisattvas did not attain awakening. The sections before describe *Sadāpramuktaraśmi, from the time in the womb of his mother till his form as earthly remains, as emitting light that has a highly beneficial effect on all living beings. I can hardly see any connecting link between this story and the core sūtra, aside from the (surely not central) fact that *Sadāpramuktaraśmi also emits light while in the womb (**garbha*) of his mother.

Seemingly even more unrelated is the question of Ānanda (12A–B), which is missing in *TGS*, and is thus probably a later interpolation. Ānanda asks the Tathāgata how many buddhas one has to hear the Dharma from in order to attain perfection. In his answer the Tathāgata does not restrict their number, but stresses the importance of generating the aspiration to awaken immediately. As stated above, one reason for the interpolation of this story with Ānanda as the main figure could be his role as the one who is usually entrusted with the preservation of the teaching. However, this section does not contain any topical link with the other parts of the sūtra.

Another minor observation further highlights the heterogeneity between parts 10 to 12 and the similes: whereas throughout the similes the Tathāgata addresses a large audience led by Vajramati (*kulaputrāḥ*), in the following sections he only speaks to Vajramati. This strengthens the conclusion that we have a core sūtra, consisting of the nine similes, embedded in an introduction and other essentially unrelated elements at the end. Particularly in regard to the story of *Sadāpramuktaraśmi, the reasons for its inclusion in the sūtra remain unclear, if it was not simply the need to extend the sūtra's length.

1.5 The Structure, Nature and Contents of the Nine Similes

As mentioned above, all similes with the exception of the first one bear witness to a realistic, down-to-earth spirit. They are of a mundane nature; the scenes described can be easily imagined by readers and, for the most part, are taken from daily life. As I have argued above, the inclusion of the first image, though exceptionally fantastic in nature, was due to the fact that the compilers wanted to combine the eight similes with the introductory element centering on the lotuses, and therefore felt compelled to expand upon the setting of the introduction in the form of a simile. All the similes show the same specific structure:³⁸ they first start

³⁸ See the entry in Meyer s.v. *Gleichnis*: “Sprachliches Gestaltungsmittel, bei dem eine Vorstellung, ein Vorgang oder Zustand (Sachsphäre) zur Veranschaulichung und Intensivierung mit einem entsprechenden Sachverhalt aus einem anderen, meist sinnlich-konkreten Bereich (Bildsphäre) verglichen wird. Bild- und Sachsphäre sind im allgemeinen durch Vergleichspartikel („so ... wie“) ausdrückl. aufeinander bezogen, sie decken sich aber nicht wie in der Allegorie in mehreren Einzelzügen, vielmehr konzentrieren sich die einander entsprechenden Züge beider Sphären in einem einzigen, für die Aussage wesentlichen Vergleichsmoment, dem Tertium comparationis, in dem die beiden Seiten sich berühren. Das Gleichnis ist vom bloßen Vergleich

with the description of a situation or process in the material sphere (*upamāna*; “Bildsphäre”) to which the assumed factual situation (*upameya*; “Sachsphäre”), namely the existence of buddhahood in all living beings, is then compared. In contrast to what we normally call “allegory,” a simile does not allow parallels to be drawn between a whole range of congruent factors featuring in the *upamāna* on the one hand and in the *upameya* on the other. Rather, the two spheres merely share a common *tertium comparationis*, the central point of comparison, which it is the aim of the simile to illustrate. Some of the similes do seem to call for an allegorical interpretation. In 4B the elements of the material sphere are explicitly compared to their counterparts in the spiritual realm. Nevertheless, what A. Jülicher has convincingly demonstrated for the interpretation of similes in the New Testament, namely that they were undermined by the “Gefahr unsachgemäßer allegorischer Auslegung, als man jeden Zug in ihnen tiefsinnig zu deuten versuchte,”³⁹ should serve as a warning for the interpretation of our similes. Let us keep in mind that it was not the intention of the author(s) to construct allegories with perfect proportional relations in regard to all single elements.

What, now, is the *tertium comparationis* of our similes? Generally speaking, it is the notion that a precious element, pure in nature, but hidden and unsuspected, truly exists, and while it is covered by impurities, its nature remains unaffected. The similes, though they each emphasize different aspects of this *tertium comparationis*, are meant to illustrate the same basic situation. As a further element common to most of the similes, and thus a second *tertium comparationis* of sorts, we find the description of the release of this precious element with the attending beneficial consequences for living beings. In the following, I will summarize the content of the similes and try to point out what each of them emphasizes.⁴⁰

As suggested above, the first simile was probably not part of the earliest set of eight. However, with the decision to adapt the introductory lotus scenery to

durch die breitere Ausgestaltung und eine gewisse Selbständigkeit des Bildbereichs unterschieden, wird des öfteren auch gleichbedeutend mit Parabel verwendet; vielfach werden jedoch beide Begriffe in dem Sinne unterschieden, daß bei der Parabel die Sachseite nicht ausdrückl. genannt ist, sondern erschlossen werden muß (demnach setzt die Parabel das Bild *statt* der Sache, das Gleichnis setzt es *neben* sie).“

³⁹ See Meyer s.v. *allegorische Schriftdeutung*; further Adolf Jülicher, *Die Gleichnisreden Jesu*, Freiburg, 1899.

⁴⁰ Though the similes shed light on the *tertium comparationis* from different angles, they are similar enough to convince one that (with the exception of the first simile, as argued above) they were composed and arranged by a single person or a group of persons who worked in very close cooperation. There are, nevertheless, some minor observations which suggest a kind of loose grouping of similes 2, 3, 4 and possibly 1A (= the “new” lotus simile) on the one hand and similes 0M/1B and 5 to 9 on the other. That the newly introduced simile 1A mirrors partly similes 2 and 3 (e.g., the person is *desirous* to see the tathāgatas: ... to get the honey (2), ... to have food (3)) is natural since they were the ones immediately after 1A, and so the obvious prototypes. A common element of 2, 3 and 4 (verse 4.4 in *Ch₁*) is the term *buddhatā^o tva /tathāgatatā^o tva* to designate the buddha-nature of living beings. Similes 0M/1B, 5, 6, 7, (8) and 9, on the other hand, share the term *tathāgatajñāna* and, what may be of more significance, they state that the Buddha teaches bodhisattvas (and not common living beings) in order to remove their defilements. The awakened bodhisattvas are then expected to help again other living beings. However, I do not think that these differences are enough to support further text-historical conclusions, which could only be highly speculative.

the eight similes, and the formulation of the lotus simile itself,⁴¹ it became the most arresting, impressive and comprehensive illustration. The compound *tathāgatagarbha* itself, mentioned in close relation to the term *padmagarbha*, the “lotus calyx,” probably also developed from it. The lotus, by far the commonest flower in Buddhist literature, and a symbol of the spotlessness of the bodhisattva acting in saṃsāra, its flowering being compared with the manifestation of the virtues of buddhahood,⁴² is worthy of the prominent position accorded to it in the first simile. The illustration draws a contrast between the ugly, withered flowers and the brightly shining tathāgatas sitting in meditation in their calyxes. Just as these tathāgatas are found inside the lotuses, completely unaffected by their abhorrent surroundings, so too do sentient beings contain fully developed tathāgatas within themselves. In the *upameya* the author still presents the picture of a very concrete tathāgata situated in living beings, an image borrowed from the material sphere of the same simile. The second main point of the illustration is the removal of the withered petals by a person with divine vision. Obviously only he can know about the tathāgatas hidden in the petals. The act of removal is compared to the teaching activity by which the Tathāgata induces or directly accomplishes the elimination of the defilements of living beings, which had hitherto veiled their buddha within.

The simile of honey shielded by bees contains one irritating element, namely the collecting of honey, which is a highly destructive activity that robs bees of a source of life.⁴³ Nevertheless, it was used by the author to illustrate how a person with skill in means would know about the honey contained in the comb and manage to expel the insects. This is compared to the removal of the defilements by the Tathāgata. The honey is then used in an “appropriate” way.

⁴¹ To be exact, we need to deal in terms of an “old” and a “new” lotus simile (see above). However, here I will not differentiate between them but consider both as a unit. This is how the reader would understand things, and also follows the traditional exegetic approach.

⁴² See *RGV* II.8.

⁴³ Not much is known about honey-collecting activities in India. In a publication of the year 1988 Eric Valli and Diane Summers describe how a group of “honey hunters” of the Gurung tribe in Central Nepal make their living by collecting and selling honey. They go into jungle areas and climb rocky cliffs where the bees, usually the *Apis laboriosa*, the largest honeybee in the world, have their combs. These nests may be as big as a human being, and contain between 50 and 60 kg of honey. A group of hunters, consisting of five to ten people, takes about one hundred nests a year. Amounts reported for the days of their grandfathers are about ten times as high, but yields are continually decreasing due to “the destruction of existing nests and the diminishing forest.” (This and all following quotations are taken from the introduction in Valli and Summers 1988.)

The work is very risky, since one of the hunters has to climb down a 50-m-long swaying rope-ladder from above the cliff and to cut out the comb. Before he can do that, he has to expel the bees with flaming bundles of leaves pushed under the comb. The bees react aggressively and “attack any moving creature” who does not protect itself with the smoke of leafy branches fed into a fire. Once the bees have left, the comb is partially cut out and lowered down to the ground in a basket. The authors remark that “unknowingly, the hunters have become terrible predators. Entire colonies of bees are destroyed when Mani Lal [the leader of the hunters] cuts down their nests. If the queen and enough worker bees escape and return, the colony can be quickly reconstructed and, within a month, the nest can be sufficiently pregnant with honey for another expedition to be launched.”

All parts of the comb are exploited: the larva cells, rich in protein, are consumed as tonics; the melted and filtered wax “is sold in Katmandu to the artisans who use it in the lost-wax process of casting statues” (see simile 9); the precious honey, “valued as a universal remedy and tonic, is sold to villagers or exchanged for grain, yogurt, milk, a chicken, or even a day’s work.” The price in 1988 for 454 g (1 pound) of honey was ten Nepalese rupees, a sum which must be seen in relation to the average two rupees a day on which about 60 percent of the rural population then lived.

The beneficial result is likened to living beings who become tathāgatas and can perform buddha-acts for the good of other sentient beings.

In the third simile of kernels enclosed by husks, the main emphasis lies on the obviously aberrant belief, as *Ch₁* puts it, that kernels in their husk have no use. The author is assured that every listener knows about the relation between kernels and husks in the case of cereals—on which the simile is based. It thus seems that in this illustration the author wanted to stress the commonness of the fact that buddhahood is found in all living beings (covered by defilements) and the normality of its manifestation. He compares the manifestation of buddhahood to the ordinary process of turning cereal to account by extracting edible grains. The usual *tertium comparationis*, namely the fact that something valuable is hidden in impurities, does not seem to be of primary significance here.

A gold nugget in excrement is at the center of the fourth simile. The contrast between a nugget of pure gold and its surroundings, a “place of decaying substances and filth, a place full of putrid excrement,” could hardly be greater. The nugget remains hidden in this place for many hundreds of years. No one would expect such a place to be the depository of a gold nugget. The simile draws the reader’s attention to two points: first, the imperishable nature of the gold, which is later compared to the true nature of living beings. Its nature guarantees that the gold remains without any decay in spite of its surroundings. Secondly, the highly unexpected nature of the simile is meant to induce one to believe that the hidden buddha-nature will one day be revealed even in a sentient being who hardly anybody would think capable of becoming a buddha. The role of the divinity which in the *upamāna* advises a person to look for the nugget and clean it, is filled in the *upameya* by the Dharma-teaching Tathāgata.

The topos of a hidden treasure beneath the house of some poor person for the unknown buddha-nature in living beings is, with some variations, also found in the *Mahāparinirvāṇasūtra*.⁴⁴ The simile in the *TGS* is replete with oppositions: The house owner (or nobleman) (*grhapati*) lives in poverty, though right below his house is a huge treasure of precious materials. He walks up and down lost in his thoughts, while the treasure, the solution to his problems, lies untouched. He is unaware of the treasure and nobody, not even the treasure itself, can inform him, even though it is a *grhapati*’s duty as one of the seven jewels of a *cakravartin* ruler to find hidden treasures. Indeed, he himself is obviously in need of a person with a supernatural eyesight to make him see that all he requires is beneath him. Such a person is not mentioned in the *upamāna* of the simile, but appears as the Tathāgata in the *upameya*. After the Tathāgata has revealed the existence of such a treasure—living beings’ buddha-nature—to the bodhisattvas, they set about digging it out. It is clear that in this fifth illustration the author wanted to draw the attention of the readers to their unawareness of the “treasure” within themselves and, consequently, to the fact that there is no reason to think of themselves as spiritually poor.

The sixth simile of a sprout in the seed and the eighth of the desperate woman with the *cakravartin* embryo in her womb apparently embody a different notion. Here, at first glance, it is the process of growing, the ripening of the sprout into a “great king of trees,” around which the comparison turns. This would at

⁴⁴ See *MPNS S* 184b1ff.; *Q* 105b6ff.; see also Takasaki 1974: 144f.

least be the reader's first impression. I will argue below that, though this notion may be evoked, this is not the main intent of the authors, and that we should take care here not to fall into the trap of too allegorical an interpretation. A closer analysis of the wording will show rather that the essential sameness of sprout and full-grown tree, their alternate generation, and the fact that the tree is contained in its complete but not yet fully unfolded form already in the seed go to make up the focus of the simile. In contrast to most of the other similes no act of purification is needed. The ripening is described as a more or less automatic process once the seed has fallen on the soil. Section 6B, representing the *upameya*, can be said to be quite unusual for the *TGS*. The difficult and terminologically laden content differs in each translation, and follows a more abstract line: it seems to offer a definition of the term *sattva*, the term *sattvadhātu* appears, and describes a tathāgata who discloses the Dharma as a “supreme, great accumulation of knowledge.”

A dangerous wilderness, further on compared to *samsāra*, is the setting of the seventh simile. The statuary image of a tathāgata wrapped in rotten rags was dropped and lies on the path. Travelers, unaware that the rags contain such an image, pass by in disgust. Only after a divinity orders a group of people to open the bundle does the image inside receive the veneration it deserves. In this simile two main features seem important to note: first, as with the gold nugget in excrement, the complete inappropriateness of where the object is deposited and thus the unexpectedness of the finding; secondly, the illustration plays up the contrast between contempt and veneration: nobody, however contemptible he or she may appear, should be looked upon as such, because everyone has a nature deserving of veneration. This is also the message found in the associated verse 7.5, where the Tathāgata wants the awakened bodhisattvas to know that all living beings have the buddha-nature and, one could add, therefore encourages them to apply themselves to the development of that spiritual capacity in living beings.

A more direct call for concrete consequences based on the *tathāgata-garbha* teaching is contained in the simile of the poor, depressed woman. An ugly, orphaned woman lives under desperate conditions in a poorhouse, despising herself. She is unaware of the fact that she has a future universal emperor (*cakravartin*)—the buddha-nature—in her womb. The illustration contrasts the apparently hopeless situation of the woman with the majesty and glory of the *cakravartin*. Of course, the idea of an embryonic *cakravartin* may, as in the sixth simile, embody the notion of a not yet fully developed element, the basis for awakening in the future. The main point in this simile, however, seems to be to show the Tathāgata's encouragement of living beings, who are again unaware of their buddha-nature, and his urging them to overcome defeatism: “Apply energy without giving in to despondency!” In this illustration, too, no activities to reveal the buddha-nature are necessary; the embryo is growing without help from outside, and his birth and future empowerment are inevitable. Section 8B contains the only passage in the *TGS* where the three-stage career *sattva* → *bodhisattva* → *tathāgata* is explicitly mentioned.⁴⁵

In the last simile of golden figures within burned clay molds the process of casting golden statues according to the *cire-perdue* method is described. The

⁴⁵ See Takasaki 1974: 62ff.

expertise of a smith is necessary in order to decide when the right time for striking the molds with a hammer has come so that—in an instant—the dirty black molds fall apart and the clean figures appear. For the Tathāgata, too, “who uses the Dharma as a hammer,” the knowledge of the right time is necessary. The bodhisattvas he purifies have to “become calm and cool.”⁴⁶ The illustration seems to stress the suddenness with which the golden figures come out. Nevertheless, this should probably not be taken as promoting the idea of a sudden awakening. Nothing that would substantiate such an idea occurs in the description of the spiritual sphere. This description serves rather to underscore the surprise and complete unexpectedness arising the moment the burned and ugly mold is replaced by a golden image from inside. The simile describes accurately and in detail this method of casting, which is still practiced among artisans in India and Nepal.⁴⁷

2. The Meaning and Occurrences of the Term *tathāgatagarbha*

2.1 The Term *tathāgatagarbha*

As the summary of the similes above has revealed, the idea that all living beings have the buddha-nature is not illustrated in a completely homogeneous way. We should therefore try to grasp more clearly the conceptual elements which underlie the notion of this nature in the *TGS* and the relationship of the level of ordinary, still unrealized living beings to the level of a tathāgata’s perfect realization. Here it may be useful to begin with the term *tathāgatagarbha*, which gave its name to the sūtra itself, and became well established in its Chinese translation *rulai zang* 如來藏 as the main designation for the buddha-nature theory in East Asia.

First of all, it should be noted that the term *tathāgatagarbha* is not as pervasive in the *TGS* as one would expect, judging from the later tradition. Its use in the similes is restricted to the “new version” of the first simile.⁴⁸ There, however, it occurs in the passages which seem to impart in concise form the main message of the sūtra: In 0M and 1A it is stated that the Tathāgata perceives all living beings as *tathāgatagarbha*.⁴⁹ Then, in 1B, a passage which is cited word for word in the *Ratnagoṭravibhāḡavyākhyā* contains the main message of the *TGS*. The Sanskrit citation in the *Ratnagoṭravibhāḡavyākhyā* reads as follows:

*eṣā kulaputra dharmāṇām dharmatā / utpādād vā tathāgatānām anutpādād vā sadaivaite sattvās tathāgatagarbhā iti / (RGVV 73.11–12)*⁵⁰

⁴⁶ Cf. *SP* II.48 (45.13f.).

⁴⁷ Reeves (1962: 118) reports that among smiths in Madras the hollow inside the mold is called *karu* (“womb” (= Skt. *garbha*); see Miron Winslow, *Tamil-English-Dictionary*, reprint of the edition from 1862, ed. K. L. Janert, Wiesbaden: Steiner, 1977, s.v. *karu*).

⁴⁸ See section 1.4. The “new version” comprises the last sentence in 0M, all of 1A, and the first sentence of 1B.

⁴⁹ 0M (probably a later interpolation into *TGS*₂; see section 1.4): *de bzhin gshegs pa'i mig des sems can thams cad de bzhin gshegs pa'i snying por mthong ngo //*; 1A: *rigs kyi bu dag de bzhin gshegs pas kyang sangs rgyas kyi mig gis sems can thams cad de bzhin gshegs pa'i snying por mthong nas / ...*

⁵⁰ 1B: *rigs kyi bu dag 'di ni chos rnams kyi chos nyid de / de bzhin gshegs pa rnams byung yang rung ma byung yang rung / sems can 'di dag ni rtag tu de bzhin gshegs pa'i snying po yin ...*

Son of good family, the True Nature (*dharmatā*) of the *dharmas* is this: whether or not tathāgatas appear in the world, all these sentient beings contain at all times a tathāgata.

This passage was probably inserted together with the “new version” of the first simile. Placed at the end of the “new” simile, it was meant to summarize the main point of that simile, and should thus be considered the nucleus of the doctrinal message of the *TGS*. That the passage was felt to have such an eminent position is also attested by the fact that the *Ratnagotravibhāgavyākhyā* quotes it word for word. The author of this passage knowingly associates the claim that living beings are always *tathāgatagarbha* with the well-known Buddhist formula *dharmāṇāṃ dharmatā ...*, which is usually employed to introduce the fundamental law of *pratītyasamutpāda*. This attests that he himself regarded the passage *sadaivaite sattvās tathāgatagarbhāḥ* as the essence of the sūtra, a standpoint which (if the authors of the “old” eight or nine similes and the “new lotus simile” are indeed different) would probably be shared by the composers or compilers of the other similes.⁵¹

An interpretation of the meaning of the term *tathāgatagarbha* must, as a matter of course, start from the context in the *TGS* in which it originates.⁵² The context is that of the withered lotuses with beautiful tathāgatas sitting in the center of their calyxes (*padmagarbha*). In the same way that full-fledged tathāgatas sit in the flowers, so also, according to the sūtra, are buddhas contained in living beings.⁵³ If living beings are said to contain a tathāgata, they should function as receptacles, and the compound *tathāgatagarbha* must accordingly be understood either as a *bahuvrīhi* in the sense of “containing a tathāgata” or as a *tatpuruṣa* meaning “store of a tathāgata.” However, in order to reach an adequate interpretation of the compound, I need to preface some remarks on the term *garbha*, and then give an overview of the range of possible interpretations of the whole compound, in part offered by the texts which succeeded the *TGS*.⁵⁴

Concerning the term *garbha*, the *Etymologisches Wörterbuch des Altindiarischen*⁵⁵ provides us only with the two meanings “Mutterleib; Leibesfrucht, Embryo, Neugeborenes.” It seems, however, that, starting from this biological background, *garbha* took on other, less specific senses, such as “the inside, middle, interior of anything, calyx (as of a lotus), ... any interior chamber, adytum or sanctuary of a temple &c.” (*MW*), or, as Hara has shown for epic literature, “germ, seed, infant, child” and, by analogy with the vocable *putra* as the last member of a compound, even simply “member (of a family lineage).”⁵⁶ Also familiar is the function of *-garbha* at the end of a *bahuvrīhi* compound, indicating that the prior member(s) of the compound is/are *contained* in the

⁵¹ See also Zimmermann 1999: 158.

⁵² For the occurrence of the term *tathāgatagarbha* in the *Gaṇḍavyūhasūtra* (*GV* 221.2–6), a controversial interpretation of it, and what this means for the relation between the *Gaṇḍavyūhasūtra* and the *TGS* see Takasaki 2000: 75f. (with his references to Matsumoto 1994).

⁵³ Explicitly so stated in OM and verse 1.3.

⁵⁴ An excellent discussion of this complex problem from different angles is found in Seyfort Ruegg 1969: 499ff.; 1976: 352f.

⁵⁵ Manfred Mayrhofer, *Etymologisches Wörterbuch des Altindiarischen*, 2 vols., Heidelberg: Carl Winter Universitätsverlag, 1992–1996, s.v. *garbha*.

⁵⁶ See Hara 1994.

subject the compound refers to.⁵⁷ Especially in the last case it is difficult to judge how far a biological, embryonic shade of meaning was still felt, that is, to what degree *-garbha* had become a purely grammatical unit used at the time our sūtra came into existence to express a relation of inclusion void of any strong lexical connotations. However, the original embryo-related meaning of *garbha* did not completely fade out in later centuries; indeed *garbha* even became associated with the semantic field of “offspring.” This suggests that the grammatical application of *-garbha* never became totally free of the underlying idea of an embryo still in need of development in a nurturing, womb-like container, if the context in question was susceptible of such a nuance.

But there is another secondary semantic field with which the term *garbha* seems to be closely associated, namely the “central part” or “essence” of something. This development is mirrored in the regular choice of Indo-Tibetan translators to render *garbha* into Tibetan as *snying po*: “the chief part, main substance, quintessence” (*Jā* s.v. *snying po*; see also *snying*: “the heart, ... the mind”). To be sure, this meaning is not supported by the Sanskrit dictionaries, nor by Pāli. At best, the meanings “inner chamber” or “adytum” as the central and most holy part of a temple might suggest something in this direction. However, the corresponding forms of *garbha* in a number of modern Indian languages can also have the meaning of “core,” “heart,” “pith” and the like, and this thus further strengthens the case that Skt. *garbha* from a certain time on must have embraced this sense.⁵⁸ If this is so, we must also allow that the employment of *-garbha* at the end of a *bahuvrīhi* compound could have such a nuance: “to contain essentially.” Whatever the case, from a certain time on, as Matsumoto has demonstrated, the use of the term *garbha* became widespread in Indian Buddhist scriptures, for example, in the *Gaṇḍavyūha* and the *Daśabhūmikasūtra*.⁵⁹ Names containing *garbha* as a member, such as the long list of bodhisattva names in the introduction of the *Daśabhūmikasūtra* (a list which is not yet in the earlier translation of Dharmarakṣa), came into use. The term *garbha* proved highly popular, and one wonders if it was always possible to decide on an exact equivalent in a translation. Indeed it seems that once *garbha* became a fashionable term it was easily compounded with other words without itself exhibiting a very concrete meaning.

Let us now turn to the compound itself. I have grouped the alternatives according to grammatical categories.

⁵⁷ See *PW* s.v. *garbha*: “Uebertragen am Ende von adj. comp. (f. ā): dieses als Leibesfrucht tragend, in seinem Innern bergend, enthaltend...”

⁵⁸ See *Turner* no. 4055 (*garbha*-): “... Sindhī *gabhu* ... kernel, pith; ... Nepāli ... *gābho* core, inside (e.g. of a fruit); ... Hindī ... *gāb* pulp, pith; ... Marāṭhī ... *gābhā* heart, core; ... Koṅkaṇī ... *gābbo* inner core of plaintain stem...” H. Isaacson kindly drew my attention to three relatively late passages: one in the *Yogaratnamālā*, a commentary on the Hevajratantra, where *garbha* in the term *vajragarbha* is synonymized as *hṛdaya* (David L. Snellgrove, *The Hevajra Tantra, A Critical Study, Part 2: Sanskrit and Tibetan Texts*, London: Oxford Univ. Press, 1959, p. 136); the second, in Ratnākaraśānti’s as yet unpublished *Muktāvalī*, another commentary on the *Hevajratantra*, where the same gloss is given (National Archives, Kathmandu, MS 4-19 = Nepal-German Manuscript Preservation Project Reel No. A 994/6, f. 80r1; Tokyo University MS 513, f. 57r6); the third, in the commentary on the *Tantrāloka*, the *Tantrālokaivēka* by Jayaratha, where *garbha* is interpreted as *sāra* (Mukund Rām Shāstrī (ed.), *The Tantrāloka of Abhinava Gupta with Commentary by Rājānaka Jayaratha*, vol. 1, Kashmir Series of Texts and Studies 23, Allahabad: The Indian Press, 1918, commentary to 2.32).

⁵⁹ See Matsumoto 1994: 411ff., in particular pp. 421, 460, 471.

① *Tathāgatagarbha* as a *tatpuruṣa* compound. Here three cases need to be considered:

- a. The prior member of the compound can be determined as having an elided genitive case ending: *tathāgatasya* or *tathāgatānām garbhaḥ*: “the embryo of a/the tathāgata(s).”⁶⁰ This interpretation seems to be the most common one in the tradition following the *TGS*. The word can in this case be understood as referring to the “embryo of a/the tathāgata(s)” within all living beings. In the *TGS*, however, *tathāgatagarbha* cannot have this meaning for two reasons. First, in the statement *sattvās tathāgatagarbhāḥ* the compound cannot be understood as a *tatpuruṣa* designating the “embryo *within*” because grammatically it is the predicate of *sattvāḥ*. Secondly, as mentioned above, rather than with the embryo of a/the tathāgata(s) the *TGS* deals with *full-fledged* tathāgatas in flowers (and in living beings).
- b. A living being as the “womb of a tathāgata”: A living being as the womb of a tathāgata seems to accord with the image of lotuses enclosing tathāgatas within their womb-like calyxes in the *upamāna*. Matsumoto adopts the translation “container of a tathāgata” (如来の容れもの) for the *TGS*, rejecting Schmithausen’s and Ruegg’s categorical statement that the compound *tathāgatagarbha* can never mean “matrix of the Tathāgata” in Indian texts.⁶¹ In his argument why the compound within the *TGS* should be interpreted as a *tatpuruṣa*, Matsumoto obviously does not consider the alternative provided in ②a below. He argues that the author of the *TGS* had first to “invent” the concept of *padmagarbha*, the “lotus calyx” where the tathāgatas are seated, in order to construct the analogy between the lotuses and living beings. Once *padmagarbha* was adopted as the interior space of a lotus (蓮華の内部空間), the author of the *TGS* could develop the analogy of tathāgatas seated in the interior space (*garbha*) of living beings. Matsumoto asserts that once living beings are the referent, they could accordingly be denoted as “containers of a tathāgata.” He admits that the author of the *TGS* thus operates with two meanings of *garbha*, namely “interior space” and “container,” and that the author was well aware of this fact.⁶²

Now, I think Matsumoto’s argumentation is less than conclusive. First of all, the meaning of “container” for *garbha* seems not to be very common, if documented at all. On the basis of its meaning “womb,” *garbha* designates a space within rather than a container or a sheath around something. This is clear from the entry under *garbha* found in the *PW* and *MW*: “Mutterleib,” “interior chamber.” Regarding the second point, I agree with Matsumoto that the terms *padmagarbha* and *tathāgatagarbha* are probably intentionally employed by the authors in some kind of analogy. But if this is the case, should we then not argue that *-garbha* expresses in both cases a comparable sense, namely the *inside* of a lotus and the *inside* of living beings respectively? This at least would make things less complicated. Alternative ②a proceeds along these lines. Admittedly, from a purely grammatical point of view Matsumoto’s argumentation avoids the somewhat disturbing situation that the compounds, if

⁶⁰ See e.g. *LAS* 223.14: *garbhas tathāgatānām*; *LAS* 357.15 (*Sagāthakam* 346c): *garbhas tathāgatasya*.

⁶¹ See Matsumoto 1994: 498ff., referring to Schmithausen 1971: 133, n. 44 (and further p. 156), who finds confirmation in Seyfort Ruegg 1969: 499ff.

⁶² See Matsumoto 1994: 495ff.; 526f.

we follow ②a, belong to two distinct categories, namely *tatpuruṣa* (*padmagarbha*) and *bahuvrīhi* (*tathāgatagarbha*). However, even if we follow his suggestion, the relation between the members within the two *tatpuruṣa* compounds would have to be analyzed differently as a *genitivus subjectivus* in the first case and a *genitivus objectivus* in the latter.

One final remark: Matsumoto insists, on the one hand, on employing *garbha* in the sense of “receptacle,” while, on the other, he vehemently rejects the translation “womb” or “matrix,” the rendering adopted by Takasaki in his English translation of the *Ratnagoṭravibhāga(vyākhyā)*.⁶³ I do not find any fundamental difference between the two concepts, and do not think that the translation “womb of a tathāgata” is impossible, at least any more so than Matsumoto’s own rendering.

- c. The living being as “embryo of the Tathāgata”: The idea that all living beings are penetrated by the *dharmakāya* and thus are the embryos or, as Hara has shown, the children of the Tathāgata is found in the *Ratnagoṭravibhāgavyākhyā*.⁶⁴ Nothing in the *TGS* suggests that this understanding could be applied to the relation between living beings and the Tathāgata. It is therefore not relevant for our discussion here.

② *Tathāgatagarbha* as a *bahuvrīhi* compound:

- a. The most “natural” analysis of the compound would be as a *bahuvrīhi*. The *PW* (s.v. *garbha*) provides us with plenty of examples with *garbha* at the end of the compound meaning simply “to contain” (see above). The sentence *sattvās tathāgatagarbhāḥ* should thus be understood as “Living beings contain a tathāgata.” (*tathāgato garbho yeṣāṃ te tathāgatagarbhāḥ*).⁶⁵ In order, however, to understand *garbha* in a more characteristic way, we need to bring out its biological nuance or else the nuance, assumed above, of essence. The first case would result in a translation (1) “Living beings contain a tathāgata *as an embryo*.”⁶⁶ In the second alternative we would have to translate (2) “... have a tathāgata *at their core*,” or, more abstractly, “... have a tathāgata *as their nature*.” The image of the lotus renders both alternatives possible, since the tathāgatas are seated in the center of their womb-like calyxes (*garbha*). They thus have become the core of the lotus, unaffected by the withered parts of the flowers, and “emitting hundreds of thousands of rays of light.” Nevertheless, in this first simile, as in most of the following illustrations, no growing process or

⁶³ See Matsumoto 1994: 498; Takasaki, in his later translation of the *RGV(V)*, no longer employs this rendering (Takasaki 1989).

⁶⁴ *RGVV* 70.16–18: *tathāgatadharmakāyena niravaśeṣasattvadhātuparispharaṇārtham adhikṛtya tathāgatasyeme garbhāḥ sarvasattvā iti paridīpitam /*. For a different interpretation, cp. Matsumoto 1994: 498ff.

⁶⁵ See e.g. the parallel verse to the first simile in the *RGV* (I.101) where the following compound referring to living beings appears: ... *sambuddhagarbham jagat*: “... [having seen] living beings as containing a perfect buddha.”

⁶⁶ This alternative would semantically be the equivalent of “... have a tathāgata in their womb” (*tathāgato garbhe yeṣāṃ te tathāgatagarbhāḥ*), which is based on *AiGr* II, 1 § 109c, p. 279 (“Bahuvrīhis mit kasuellem Vorderglied”): “Sehr oft bezeichnet das Hinterglied einen Körperteil und dann das Kompositum denjenigen, der am betr. Körperteil etwas im Vorderglied genanntes hält oder haften hat z.B. ... *vajra-bāhu-* der den Donnerkeil im Arme hat ... *kilālodhni* Kīlāla im Euter habend...” In contrast to the rendering above (“... contain a tathāgata as an embryo”), the main thrust here should not be to characterize the tathāgata as an embryo but to point out the fact that he is found *in the womb*.

any other process of change is implied regarding the tathāgatas. To speak of a tathāgata-embryo can therefore be quite misleading, since the process of a gradual development and maturing is usually implied when speaking of an embryo in the womb. For this reason I have decided to adopt the simple rendering “... contain a tathāgata” in the translation. That, as discussed in the second alternative, this tathāgata represents the nature of all living beings need not be mentioned explicitly. It is the aim of the sūtra itself to illustrate this fact by way of the nine similes.

b. Although in ②a. the term *garbha* was understood in the “weak” sense of “containing,” it can also be interpreted in its original meaning “womb” or “embryo.” Taking it as such, we would have to translate the *whole* compound in a possessive relation to living beings as:

I. “Living beings have an embryo of a tathāgata” (*tathāgatasya garbho ('sti) yesām te tathāgatagarbhāḥ*).

II. (1) “... have a tathāgata in their womb (*garbha*),”⁶⁷ or

(2) “... have a tathāgata as an embryo (*garbha*).”

III. Or, assuming that *garbha* can have the meaning “core, essence,” as

(1) “... have the tathāgata-core” or

(2) “... have a tathāgata at their core.”

Position III.(1) mirrors the understanding of the Tibetan when rendering the statement cited above as *sems can 'di dag ni rtag tu de bzhin gshegs pa'i snying po (can) yin...*⁶⁸

Semantically, there is no difference between having the embryo of a tathāgata (②b.I) or containing a tathāgata as an embryo (②a.I/②b.II (2)). In both cases the embryo still has to develop into a full-fledged tathāgata,⁶⁹ a notion by no means expressed in the lotus image. One might argue that the situation in the *upameya* cannot be compared very smoothly to the *upamāna*. However, the other parts of the first simile clearly demonstrate that it is not an embryonic seed or such that is contained in living beings but a tathāgata itself. Further, if a philological analysis like that provided in ②a allows us to interpret the compound in a sense not contradictory to the setting of the material sphere, there can be no reason to adopt another alternative.

Regarding the third translation in ②b, namely that of III.(1) “... have the tathāgata-core” or III.(2) “... have a tathāgata at their core,” III.(2) is simply a grammatically different rendering of the translation given in ②a.2 (“... have a tathāgata as their nature.”). If we follow III.(1), the alternative that introduces the tathāgata-core as a separate element, we reach a more abstract formulation of the same basic thought, more or less disengaged from the concreteness of the material sphere. This rendering manifests a stronger monistic inclination,

⁶⁷ An analysis of this alternative has been discussed in the preceding note.

⁶⁸ For the inclusion of the particle *can* see below.

⁶⁹ Prof. Seyfört Ruegg, in a personal communication, warns that to associate the word “embryo” with the ripening process ahead could lend itself to misunderstanding. If I interpret him correctly, he is implying that the term “embryo” (*garbha*) in India at that time primarily denoted a nucleus or core embedded in some shielding environment rather than a still completely mother-dependent being undergoing further growth. I agree with him insofar as the term *garbha* in its meaning “embryo” might certainly have evoked different associations according to the field in which it was applied (anatomy, genealogy, etc.). However, I do not think that the general readership of the sūtra, be it in ancient India or in the modern world, would exclude the notion of ripening in connection with the term “embryo.”

since it may be supposed that there is only one such buddha-nature. In contrast to this, the philosophically somewhat clumsy rendering of III.(2) has to a greater degree remained true to the imagery of a multiplicity of buddhas sitting each in his own calyx.

- c. A final theoretically possible interpretation is that of *tathāgatagarbha* in the sense of “having a tathāgata as a womb,” that is, “born from a tathāgata.”⁷⁰ The compound would then refer to living beings themselves as “born from a tathāgata/the Tathāgata.” Whereas the simile of the *cakravartin* in the poor woman is based on the biological metaphor of an embryo found in the womb, none of the other similes involves such a context. Nor is the *cakravartin* said to be born from a tathāgata. The interpretation “born from a tathāgata/the Tathāgata” would thus violate the thrust of the *upamānas* and so cannot be applied in the *TGS*.

The above analysis has revealed that, in light of the *upamāna*, the grammatically adequate interpretation serving as the basic one of the compound *tathāgatagarbha* is that of a *bahuvrīhi* meaning “containing a tathāgata.” However, it would be wrong to assume that the term *tathāgatagarbha*, once the context of the first simile is left behind, would be restricted in the minds of readers to such a clear-cut definition. Having read the other eight similes, among them two employing the image of a seed and an embryo, the term *garbha* in its meaning “embryo” would automatically acquire greater prominence, and possibly overshadow the first interpretation based on the lotus imagery. The richness of the term *garbha*, which means “containing,” “born from,” “embryo,” “(embracing/concealing) womb,” “calyx,” “child,” “member of a clan” and even “core” would from the very beginning tend to keep its semantic range from being reduced to a single word.

To judge by the textual history of the *TGS*, on the other hand, the introduction of the term *tathāgatagarbha* with the “new lotus simile” (1A) took place after all the other similes had already been composed. We may thus assume that the author of this simile chose that term because it covered the whole variety of themes illustrated in the similes.⁷¹ At the same time, *garbha* is also part of *padmagarbha*, a term expressing a central image in the introduction. The compound *padmagarbha* itself is also well known as a designation for the god Brahman, who is said to be “born from a lotus” (*padmagarbha* as *bahuvrīhi*). This may have been another, highly venerable association for someone reading in the sūtra of a tathāgata seated in a *padmagarbha*. As attested by the prevailing use of the word *tathāgatagarbha* in other writings, and in the *Ratnagoṭravibhāga-vyākhyā* itself, as a *tatpuruṣa* compound (the “embryo of a tathāgata” as a separate entity), a tendency towards a grammatically non-adjectival use of the term was inherent from earliest times. The title of the sūtra further stimulated such an independent understanding, and with the appearance of the concept of *buddhadhātu* in the Mahāyānist *Mahāparinirvāṇasūtra* as more or less a synonym for *tathāgatagarbha*, the temptation to interpret this latter as a *tatpuruṣa* probably proved irresistible. In the *TGS* this is documented by at least three of the four translations into Chinese and Tibetan, where the compound is regularly rendered

⁷⁰ See Seyfort Ruegg 1969: 511, n. 4.

⁷¹ The vocable *dhātu*, too, has a wide range of meanings, the most notable being “primitive matter, constituent part of the body, mineral, relics.”

as a separate entity found in living beings in the sense of “store of a tathāgata” or “essence of a tathāgata.”⁷²

2.2 The Textual Occurrences of the Terms *tathāgatagarbha* and *garbha*

Besides the title of the sūtra itself, the term *tathāgatagarbha* is found in several passages. Let us, in the following, see to what extent the passages containing the whole compound or merely the word *garbha* fit the interpretations suggested above.

1. In a series of nearly identical formulations, the *TGS* repeats three times that living beings are *tathāgatagarbha* (0M, 1A, 1B).⁷³ The passage in 1B is cited in the *Ratnagotravibhāgavyākhyā*, and thus we know the Sanskrit text: *sadaivaite sattvās tathāgatagarbhāḥ*. *Bth* renders the compound as *de bzhin gshegs pa'i snying po*. The manuscript tradition in *Tib*, however, observes two ways of rendering it. One is identical with *Bth*. A second strand adds the particle *can* at the end of the compound: *de bzhin gshegs pa'i snying po can*. This second strand is represented by:

- *BDJNQ* in 0M,
- by no ms or print in 1A, and by
- *DLSTP*₃ in 1B.

Now, the old translation *Bth* does not have the particle *can*. From this and the fact that no edition in 1A, and only some manuscripts and prints in the other passages, testify to the particle, we can be fairly sure that it was only inserted by Tibetan editors at some late revisional stage. The particle *can*, as Seyfort Ruegg points out,⁷⁴ may serve to indicate that the translated compound was understood as a *bahuvrīhi*. The fact that it is not found in the earlier transmission could mean that at that time the rendering of a *bahuvrīhi* compound by means of *can* was not yet common practice, if ever it was, or that they tried to retain the interpretational ambiguity inherent in the Sanskrit compound by resorting to a rigorously literal translation technique. A Tibetan reader with a background in Indian grammar would probably be aware of the range of possible interpretations of such a compound in Tibetan. For a less grammatically educated Tibetan, however, a sentence like *sems can 'di dag ni rtag tu de bzhin gshegs pa'i snying po yin....* would likely be understood as “All these sentient beings *are* at all times the essence of the Tathāgata,” a statement which does not seem to be very precise. This disturbing fact may have been the reason why later redactors of *Tib* decided to add the particle *can*. They felt it necessary to differentiate explicitly between living beings and the essence contained in them, or, in the words of Seyfort Ruegg, to point out the difference between *guṇa* (“attribute”) and *guṇin* (“bearer of the attribute”).⁷⁵

⁷² For the Tibetan translation from Bathang see below.

⁷³ *Tib*: ... *sems can 'di dag ni rtag tu de bzhin gshegs pa'i snying po (can) yin ...*

⁷⁴ See Seyfort Ruegg 1969: 510.

⁷⁵ For the particle *can* in the concerned compound in the texts of the *tathāgatagarbha* theory see Seyfort Ruegg 1969: 509ff. On p. 511 Seyfort Ruegg argues that the *TGS* itself denies the identification of living beings (*sattva*) as *tathāgatagarbha*. He supposes that the treasure in the fifth simile is compared to the *tathāgatagarbha* and argues that there the treasure is said to be the *cittasvabhāva* (“l'être propre de la Pensée”) rather than the *sattva* (5A). However, I cannot find

2. Verse 1.1 contains the compound *tathāgatagarbha* in pāda c.

Tib:
ji ltar padma smad par 'os gyur pa //
de'i mdab ma sbubs gyur ma gyes la //
de bzhin gshegs pa'i snying po ma gos te //

mi 'ga' la las lha yi mig gis mthong //

Bth:
ci ltar pad mo smad¹ pa de ni
de'i lo ma rnams kyi +++ ma gyes /
de bzhin gshegs pai¹ snying po de
yang ni //
dri ma ma gos skyes² pas 'phrul
mig³ mthong //
¹ for *spyad*; ² for *bskyes*; ³ for *mi*.

Ch₁
 譬如萎變花 其花未開敷
 天眼者觀見 如來身無染

Ch₂
 如彼蓮花可厭惡 并其胎葉及鬚藥
 譬如天眼而觀見 是如來藏無所染

Parallel verse *Ratnagotravibhāga* I.99
yathā vivarṇāmbujagarbhaveṣṭitam
tathāgataṃ dīptasahasralakṣaṇam /
naraḥ samikṣyāmaladivyalocano
vimocayed ambujapatrakośataḥ //

Parallel verse *Ratnagotravibhāga* I.101
yadvat syād vijugupsitaṃ jalaruham saṃmiñjitaṃ divyadr̥k
tadgarbhasthitaṃ abhyudikṣya sugataṃ patrāṇi saṃchedayet /
rāgadveṣamalādikośanivṛtaṃ sambuddhagarbham jagat
kāruṇyād avalokya tannivaraṇaṃ nirhanti tadvan muniḥ //

A translation based on *Tib* would most naturally run:

It is as if [there is] a disgusting lotus whose [unsightly] sheath-[like] petals are not opened out, yet the *tathāgatagarbha* is unpolluted [by the petals], and a person with divine vision will perceive [it].

The fact that the term *tathāgatagarbha* can here hardly be taken as a *bahuvrīhi* referring to living beings, the usage attested for 0M, 1A and 1B, is cause for surprise, and sets this verse off from the prose section. The term *tathāgatagarbha* is not expected in the *upamāna*, it clearly being an element of the *upameya*. Had the Tibetan versions, as *Ch₁* does (如來身), employed *lus* or *gzugs* in the *upamāna* instead of *snying po* (Skt. *garbha*), there would have been no irregularity. However, both Tibetan versions read *snying po*.

A clue to how the pāda should be understood can be obtained by reference to the parallel verses in the *Ratnagotravibhāga*. There, in the first pāda of I.99, the *tathāgata* in the *upamāna* is described as *vivarṇāmbujagarbhaveṣṭita*: “enclosed in the calyx of a lotus of ugly color.” Similarly in *Ratnagotravibhāga* I.101 the *sugata* is said to be found in “its (= the lotus’s) calyx” (*tadgarbhasthita*). In both cases the term *garbha* appears, and designates clearly the inside, the calyx, of the lotus. If we interpret the compound in *TGS* 1.1 in this way, namely with *garbha* referring to the inside of the lotus, we end up with a reading perfectly in accordance with the situation

any explicit identification of the treasure with the term *tathāgatagarbha*. Accordingly, and in light of the version from Bathang, my understanding of the passage differs from Seyfort Ruegg’s translation (see the note in my translation). Further, in 5B the *bodhisattvas* are compared to the treasury of the qualities of a buddha.

described in the prose before: “... yet *the inside [of the lotus containing a] tathāgata* is unpolluted [by the petals],...”⁷⁶ This reading makes it very clear that *garbha* can only be taken as the inside of the flower, in contrast to the sheath-like petals mentioned in the pāda before. In the *TGS* these tend to be referred to by the term *kośa*.

3. A translation of the compound *tathāgatagarbha* also appears in all manuscripts and prints of *Tib* in 5A, in an enumeration of buddha-qualities said to be present in living beings.⁷⁷ The only way of interpreting the compound there is as a separate entity found in living beings. However, a parallel in 5B, *Bth* and the Chinese versions leads one to believe that the reading should be *tathāgatajñāna* instead of °*garbha*:

- For the parallel with *ye shes* instead of *snying po* in *Tib* see 5B.12f.
- *Bth*: *de bzhin gshegs pa'i yeshes dang : stobs dang : mi 'jig pa dang : sangs rgyas kyi chos ma 'dres pa mdzod //*
- *Ch*₁: 如來知見、力、無所畏大法寶藏在其身內, ...
- *Ch*₂: 而有如來智慧、力、無所畏諸佛法藏, ...

I have accordingly concluded (see translation and note) that the reading in the Sanskrit must originally have been *tathāgatajñāna*.

4. Much more problematic is verse 10.10.⁷⁸ Given that the content of this verse varies widely in the different translations, it would seem impossible to draw conclusions about the original Sanskrit text. However, the lotuses have withdrawn far into the background, so that an interpretation like the one suggested in my translation, with *tathāgatagarbha* meaning “embryo of a tathāgata,” seems all but unavoidable.

The verse has no correspondence in the prose, which deals with the merit attained through propagating the *TGS*. The verse parallels to the prose come to a natural end in verse 10.9. Verse 10.10 causes wonder owing to its sudden return to a doctrinal message and the occurrence of *dharmatā*, which is referred to with the pronoun *'di*, even though it has not been mentioned before. We have therefore good reason to assume that the verse 10.10 is a later interpolation into the common ancestor of *TGS*₁ and *TGS*₂. It could in fact be a citation from another work. If so, it would not come as a surprise that our compound turns out to be a *tatpuruṣa*—the prevailing usage in later times.

The term *garbha* appears frequently in the *tatpuruṣa* compound *padmagarbha* and also as a single word designating the calyx of a lotus (in the sense of its interior). This usage is attested in 0G, 0H (twice), 0I, 0M, 1A and, if my analysis above is right, also in 1.1 as part of the compound *tathāgatagarbha* (*tatpuruṣa*; see above).

In verse 1.3, *Bth* twice uses the term *snying po*, once to designate the inside of living beings and then to refer to the lotus whose *snying po* is said to be

⁷⁶ Alternatively, the Sanskrit construction may have been *tathāgato°tam garbha anupaliptah°tam* or something similar (depending on the metrical structure; *garbha* for the locative case *garbhe*). If we assume that the verses were composed in Buddhist Hybrid Sanskrit, we might even expect simply *tathāgata garbha* ..., with *-ta* replacing a classical Skt. *-tah* or *tam*. Later translators, already used to the compound *tathāgatagarbha*, would then have automatically interpreted the phrases as a compound.

⁷⁷ The grammatical relation between the compound and the following qualities is not clear: whereas *L*, *S* and *T* place a genitive particle between *de bzhin gshegs pa'i snying po* and *stobs dang /...*, in all other texts of *Tib* no such particle is found.

⁷⁸ See also the note in the translation.

disgusting. The word for the inside of living beings (*Ch*₂: 内) in *Tib* is *dkyil*. If the Sanskrit for *dkyil* (*Tib*) or *snying po* (*Bth*) was in fact *garbha*, as the rendering of the passage in the *Ratnagoṭravibhāga* suggests (*saṃbuddhagarbhaṃ jagat*; I.101),⁷⁹ it would be hard to explain why the translators of *Tib* refrained from a rendering with *snying po* for the “inside” of living beings. I thus tend to assume that the Sanskrit had *madhya* or something similar instead.

In the second case, *Bth* speaks of the disgusting calyx (*snying po*), which is compared to the coverings of defilements in the *upameya*. *Tib* does not have the term *snying po* and instead employs *sbubs* (so also *Ch*₁: 花纏), a term in *Tib* usually associated with the *kleśas*, an element of the *upameya*. However, in 1.1 *Tib* also compares the petals of the lotus to sheaths (*de'i mdab ma sbubs gyur*).⁸⁰ In view of the meaning “interior of something” of *garbha* and the clear differentiation in verse 1.1 between *snying po* (*garbha*) as the inside of the calyx, on the one hand, and the sheath-like petals that constitute the enclosure, on the other, the use of *snying po* in this context is odd: in verse 1.1 above it was said that the *snying po* of the lotus remains unpolluted. To now call this same *snying po* disgusting is a clear contradiction, obviously not noticed by the translators of *Bth*. The term *sbubs*, probably a rendering of Skt. *kośa*, is not found once in *Bth*. To denote the sheaths of *kleśas*, *Bth* resorts to *mdzod*, another translation for *kośa*. One can only wonder why, in the case of the lotus sheaths (**padmakōśa*), the translators of *Bth* refrained from a translation with *mdzod* and applied the obviously unfitting *snying po*.

In 6B the passage *sbubs kyi nang na snying por gyur pa de bzhin gshegs pa'i chos nyid* could be interpreted as “... the true nature of the tathāgatas, having become the *essence* inside the sheaths...” or “... that true nature of a tathāgata in an *embryo*-like state” (see note in the translation). The compound *snying por gyur pa* probably renders Skt. *garbhasṭha* or *garbhagata*, since *Bth* reads ... *dbus^a kyi snying por de bzhin gshegs pa'i chos nyid kyang gnaso* // [^a for *dbul*]. As an analysis of compounds of this form—though chiefly restricted to the *Mahābhārata*—in Hara 1994: 38, n. 4(1) has proved, *garbha*- bears in this combination the meaning “womb,” and should consequently—if probably against the intention of the translators—also be understood in this way in our passage: “... the true nature of the tathāgatas who are in the womb/who are in the interior/who are within.” The parallel verse in the *Ratnagoṭravibhāga* (I.117) reads *phalatvagantaragataḥ saṃbuddhabījāṅkuraḥ*. There °*gata* also refers to the place and not to the state in which the sprout is found (for which one would expect a formulation such as ... *garbhatvaṃ gatā*). However, the translators of *Tib* may have been thinking that *snying po* designates here the embryonic essence and not the womb. Besides this instance there is no other example of *snying po* denoting the inside or the womb of living beings in *Tib*.

In *Bth* the term *snying po gnas* for, probably, *garbhasṭhāna* or *garbhavasati* (“womb”) appears in 8.5. The equivalent in *Tib* is *mngal gnas*, which usually means “embryo,” but which I take as a literal rendering of the Skt. compound. (See the note in my translation for further arguments.)

In a passage in 8B, *Tib* designates the interior of living beings with *khong*, while *Bth* has *snying po*. Fortunately, this passage has been preserved in Sanskrit

⁷⁹ The compound *saṃbuddhagarbha* in I.101 is a *bahuvrīhi*. The grammatical structure of the verse in the *TGS* is different.

⁸⁰ Unfortunately the corresponding word is not readable in *Bth*.

in a quotation of the *Ratnagoṭravibhāgavyākhyā* (72.11–12), where we find *garbhagata*. The reason why *Tib* prefers *khong* could be a word play with *khong* in the part immediately following: ... *khong na yod kyang sems can de dag gis khong du ma chud do //*. On the other hand, in view of the fact that, in contrast to *Bth*, *Tib* avoids *snying po* as the term to designate the interior of living beings in 8.5, and possibly also 1.3, one could argue that the translators of *Tib* refrained from using the term *snying po* when speaking about the inside of living beings and reserved it for exclusive use in the *upameya*, in cases where they meant it to imply “essence, embryo” (as in 6B). This would mean that they wanted to employ the vocable *snying po* in only one meaning in each part of the simile, namely lotus “calyx” in the *upamāna* and “essence, embryo” in the *upameya*, whilst the translators of *Bth* stuck to a rigorously literal translation, mechanically rendering *garbha* as *snying po* in all instances.

Finally, *garbha* appears as a part of names. There are two bodhisattva names including *garbha* in 0E: (20) *Śrīgarbha*, *Tib*: *dPal gyi snying po* (*Bth*: *dPal kyis snying po*) and (21) *Sūryagarbha*, *Tib/Bth*: *Nyi ma 'i snying po*. The name of the pavilion where the Buddha is staying is given as “Candanagarbha” (in the compound *candanagarbhakūṭāgāra*): *tsan dan gyi snying po 'i khang pa brtsegs pa* (see my note in 0B). Bodhisattva names with °*garbha* at the end of a compound are common in Buddhist literature. *Garbha* as part of the pavilion’s name was probably chosen or added⁸¹ owing to the central role of the term *garbha* in the description of the introductory scene in the *upamāna* (viz., *padmagarbha*) and the *upameya* (viz., *tathāgatagarbha*).

3. The Buddha-Nature Doctrine in the TGS

As has become clear in the summary of the similes above, the doctrine of the *TGS* describes living beings as bearing a full-fledged tathāgata within themselves. Though this is the case, living beings are not yet buddhas, since they are not aware of their own precious content, the tathāgatas within being covered by sheaths of *kleśas*. Nevertheless, it is stated that the nature of living beings is not different from that of the Buddha and these living beings will become buddhas themselves once the sheaths of defilements have been removed. In the following I shall deal with three crucial questions:

- What do the terms used by the authors to designate the buddha-nature of living beings imply?
- How can the process of attaining buddhahood be described?
- What actually leads to that realization of buddhahood?

3.1 The Buddha-Nature

Regarding the first query, we need to look at the terminology utilized in the *upameyas* when referring to the buddha-nature of living beings in the state of not yet being tathāgatas. In the chart below I shall restrict myself to the Tibetan

⁸¹ In *Ch₁* a translation for °*garbha* is missing.

The chart shows that in one third of all cases the buddha-nature is referred to by the term *buddha*, *tathāgata*, *jina*, **jinakāya*, **sugatakāya* etc., the denotatum of which is said to be found within living beings. It is surprising to see that the *upameyas* propound the idea of buddhas seated within living beings. To describe the buddha-nature in terms of a *tathāgata* within is to have recourse to just another metaphor, a kind of *upamāna*. Apparently the authors of the *sūtra* were trying, even after the presentation of the *upamāna*, to express their idea in words that were easy to understand. They wanted their readers to have a very concrete notion of the buddha-nature, one easy to grasp and difficult to forget. Their choice of figuration sheds light on the general problem of teaching an abstract idea, such as the concept of the buddha-nature, to a broader audience of non-specialists in the field of Buddhist *abhidharma*. For such readers it would be hard to associate the ideas of *buddhatva* or of *tathāgata-dharmatā* with themselves. The veneration of buddha statues was at the time of the *TGS*, as the seventh simile demonstrates, not unknown to Buddhist followers, and may even have featured significantly in their religious practice.⁸³ To have such a “statue” within oneself and to know it to be present in all other beings could only increase respect and appreciation towards others and towards oneself. That the buddha-nature of living beings should be expressed by the image of a buddha seated within seems to be a rather unique conception, one showing that the authors of the *TGS* were not interested in presenting a definition of the buddha-nature in philosophically abstract terms. The *Laṅkāvatārasūtra*⁸⁴ and the verses of the *Ratnagotravibhāga* that freely render

⁸³ Also intimately bound up with the idea of a buddha within living beings may be the practice of buddha visualization (*buddhānusmṛti*). Techniques of this kind are described in early Mahāyāna sources, most eminent among them the *PraS*, the “Sūtra of the Concentration of [the bodhisattva] who stands face-to-face with the Buddhas of the present” (Harrison 1978b: ix), a text already translated into Chinese by the second century CE (see Harrison 1978a; 1990; 1978b). The question if and how the ideas associated with *buddhānusmṛti* are related with the genesis of the *tathāgatagarbha* teaching is complex and cannot be dealt with here.

⁸⁴ See *LAS* 77.14ff. (though there *tathāgatagarbha* is not a *bahuvrīhi*): ... *sa* (= *tathāgatagarbho*) ... *dvātriṃśallakṣaṇadharaḥ sarvasattvadehāntargato mahārdhamūlyaratnamalinavastra¹pariveṣṭitam iva* ... [¹ read *vastra* for *vastu*]: “... that [*tathāgatagarbha*,] bearing the 32 marks [of a Great Being, and] existing inside the bodies of all living beings like a jewel of great value and price that is wrapped in a dirty garment,....” The passage clearly resembles passages of the *TGS*; see also the description of *Ch₂* in *OG*: 於一一花中，皆有如來，結跏趺坐，具三十二大丈夫相，放百千光。

parts of the *TGS* are the only possible other sources that betray knowledge of such a concrete conception. In other texts, more abstract terms became preeminent, while at the same time the term *tathāgatagarbha* was interpreted in a less concrete fashion.

Now, when living beings later become buddhas they turn into what they already carry within themselves in miniature. This is different from the idea that they have *tathāgatajñāna* or other typical qualities of a buddha which, once purified, will allow them to act as buddhas. In this latter case, it is an *attribute* common to living beings that has to be submitted to a process of purification in order for those beings to become a buddha. The former case has to do with the purification of the buddha within from the sheaths surrounding him, he himself being equipped with *tathāgatajñāna* and the other qualities (cp. 0M) which will allow living beings to turn into buddhas; that is, he is not an attribute but that into which living beings will turn. The sūtra does not specify exactly how this process is to be imagined: does the *sattva* merge into the actualized state of the purified tathāgata within, in a process of identification, so to speak, with what is within, or does the liberated tathāgata within simply enable the *sattva* to act with the mind of a tathāgata, as, figuratively, a buddha now bearing a purified tathāgata within? This question obviously did not interest the authors of the *TGS*, and so they do not offer us any basis for arriving at a conclusion. It is possible that they adopted the idea of buddhas within living beings because of its high degree of immediate visualization, without hesitating at, or even being aware of, the somewhat irritating consequences for a lucid philosophical interpretation of the *upameya*.

The *TGS* also speaks of buddhahood (*buddhatva*/^o*tā* etc.) in living beings. In contrast to the substantialist idea of a buddha(-body) discussed just now, “buddhahood” designates a state said to be found in living beings covered by defilements. Here the authors resort to abstract terms, adding the abstract suffix *-tva* or *-tā* to the words *buddha* and *tathāgata*. When the sūtra declares that this state of being a tathāgata is wrapped in sheaths of defilements, we are reminded of the concrete terminology of the *upamāna*, as if *buddhatva* was an entity comparable to the buddhas seated in living beings. I assume that the authors, captivated by the imagery of the *upamāna*, set store by the terminology of “covering” and “wrapping,” and thus decided to apply it metaphorically even to the term “buddhahood.” But whereas the figure of buddhas wrapped in the defilements of living beings was a fitting one, it is odd to describe buddhahood in such terms. At best, we can think of the single qualities of buddhahood or the *tathāgatajñāna* (see below) as being veiled, but this, I think, was not the intention of the authors.

What our authors seem to be getting at, rather, is the notion that buddhahood is somehow already present within living beings, but not yet efficacious. They try to state this belief in terms expressive of awakening, among them abstract ones such as buddhahood, *svayambhūtvā* (3B), *prakṛti* (4C) and *buddhabhūmi* (3C), not feeling it necessary—or, possibly, not knowing a good, readily understandable way—to express the relation between the unawakened and awakened state of being in less metaphorical terms.

Among the elements said to be wrapped in defilements, we frequently

encounter *tathāgatajñāna* (or: *buddha*° etc.) and *tathāgatajñānadarśana*. Both are common terms and designate the specific knowledge which traditionally confers upon a tathāgata his extraordinary status. In the simile of the **Tathāgatotpattisambhavanirdeśa* (*TUSN*),⁸⁵ which may have been the prototype for the authors of the *TGS*, the main element is *tathāgatajñāna*. It is said to pervade all living beings. The destruction of wrong conceptions harbored by living beings would make them aware of the fact that they are penetrated by *tathāgatajñāna* and lead them to a state of equality with the tathāgatas.⁸⁶

However, the simile in the **Tathāgatotpattisambhavanirdeśa* differs from the *TGS* in one important point: *tathāgatajñāna* in the **Tathāgatotpattisambhavanirdeśa* is not primarily perceived of as a separate element found within living beings. The set of similes in the **Tathāgatotpattisambhavanirdeśa* of which the one discussed here is part is introduced with an analogy between ether and *tathāgatajñāna* (*TUSN S 147a4–b4*), namely that *tathāgatajñāna*, just like ether, is the resting place of all things but itself does not rest anywhere. Though not entirely clear, the following simile in the **Tathāgatotpattisambhavanirdeśa* presents *tathāgatajñāna* as an all-pervasive element which, when living beings become aware of its presence and when the fetters of the mind are removed, constitutes buddhahood.⁸⁷

The descriptions in the *TGS*, on the other hand, suggest that *tathāgatajñāna* is a separate element abiding steadily within living beings. If so, it would be possible to apply to it the metaphor of the sheaths of defilements. Of course, one could also argue that *tathāgatajñāna* had to take this more individualized form in the *TGS* because the specific metaphor in the latter did not allow room for the idea of a single *tathāgatajñāna* that pervades all living beings' minds like ether, as seems to be the case in the **Tathāgatotpattisambhavanirdeśa*. In the *Ratnagotravibhāgavyākhyā*, the significance of the terms *tathāgatajñāna* and *buddhajñāna* is all but negligible. *Tathāgatajñāna* appears only once besides its occurrence in the quoted simile of the **Tathāgatotpattisambhavanirdeśa*. In the crucial verse I.27, where it is explained how living beings can be said to have the buddha-nature, *buddhajñāna* is mentioned as pervading them. In the following verse and in the prose commentary, however, it is replaced with the term *dharmakāya*. By contrast, both *tathāgatajñāna* and *tathāgatajñānadarśana* are well-attested terms in the *Saddharmapuṇḍarīkasūtra*.

Another particular expression used to designate the buddha-nature of living beings is (*tathāgata*-)*dharmatā*. This term has undergone considerable development in the history of Buddhism and can have at least three main meanings:

- (1) *Dharmatā* as “natural and normal custom,” “habit,” “normal state” etc.⁸⁸

Closely associated with these ideas, it can stand for the nature of *dharmas* in

⁸⁵ Cited in *RGVV* 22.10–24.8. I have partly translated the simile at the beginning of section A 3.3.

⁸⁶ See *RGVV* 24.3–6.

⁸⁷ The *upameya* in the simile of the *TUSN* (see 3.3), it is true, may be meant to evoke another idea when it speaks of myriads of pieces of cloth with the whole universe painted on them. Here, *tathāgatajñāna* would naturally be imagined as a separate element in each living being.

⁸⁸ See *BHSD* s.v. *dharmatā*; also Rahula 1974: 184; 187.

the sense of the rule to which all *dharmas* are subject, primarily the law of *pratīyasamutpāda*. Both meanings are attested in the Pāli Canon.⁸⁹

- (2) *Dharmatā* can simply mean the “character, nature or essence” of somebody or something.⁹⁰
- (3) In a later development, restricted to Mahāyāna Buddhism, *dharmatā* came also to designate the true essence of all *dharmas*, here understood as metaphysical reality more or less synonymous with *tathatā*, which is said, like ether, to penetrate all phenomena. *Dharmatā* represents here the absolute truth.⁹¹

We encounter *dharmatā* in the first meaning in the *TGS* in the well-known formula:

eṣā kulaputra dharmāṇāṃ dharmatā / utpādād vā tathāgatānāṃ anutpādād vā ... (1B; cited in *RGVV* 73.11–12; cp. the note in my translation to 1B)

The *TGS*, however, does not introduce the law of *pratīyasamutpāda* with this formula, as is usually done, but its own central message: *sadaivaite sattvās tathāgatagarbhāḥ* when referring to the buddha-nature of living beings. To speak of the *dharmatā* of all *dharmas* in the sense of “things” does not make sense here.⁹² The meaning of *dharma* probably intended in this passage of the *TGS* is “teaching,” and consequently the *dharmatā* should be understood as the essential law underlying all teachings (*dharma*), namely the fundamental thought that all living beings harbor a tathāgata within. In the Chinese translation by Buddhahadra, this is the only passage where the term *dharmatā* is rendered with characters generally used for the translation of *dharmatā*: 法爾. Buddhahadra was obviously well aware of the different connotations of this important term and preferred in all other instances to render it differently.

Dharmatā in the meaning of “essential law” also seems to fit verse 7.5, where, according to my understanding, the *dharmatā* of sentient beings is formulated as: “Here [within each sentient being] always dwells a victorious one, wrapped around [with defilements].” Buddhahadra’s translation here does not mention anything like *dharmatā*.

The *TGS* also uses *dharmatā* in a different meaning, which, judging from the number of its appearances, is the prevailing one in the *TGS*. It is part of the *upameya* in the similes. It is said to be found within living beings, where it is wrapped with defilements. Whereas in the prose passages it appears regularly as *tathāgata-dharmatā*, in the verses it is simply spoken of as *dharmatā*. It is not possible here to view *dharmatā* as the rule all *dharmas* necessarily follow. Restricted to the prose, *dharmatā* could well be the one discussed under (2) above, in the sense of “essence/nature of the tathāgatas” (*tathāgata-dharmatā*).⁹³

⁸⁹ See Schmithausen 1969a: 105ff. (parallel to the term *tathatā*); 116ff.; further see *PTSD* s.v. *dhammatā*; Rahula 1974.

⁹⁰ In this sense the term appears, for instance, in *RGVV* 10.4: *dharmadhātuṃ iti svadharmatā-prakṛtinirviśiṣṭaṃ tathāgatagarbham /* (emendation °*śiṣṭa-* to °*śiṣṭam* (ms B) in Schmithausen 1971: 135f.): “*Dharmadhātu* is the buddha embryo, which by its intrinsic nature is not different from their (= the tathāgatas’) nature (*dharmatā*).”

⁹¹ See Schmithausen 1969a: 105ff.; 116ff.

⁹² It is possible that the famous formula was simply taken over without reflecting on its adequacy regarding the immediately following “law” of *tathāgatagarbha*.

⁹³ The compound *tathāgata-dharmatā* could, however, also be understood as a *karmadhāraya* meaning “true nature in the form of/like a tathāgata,” thus referring to the simile of the buddhas seated within living beings.

There is no need to argue that the idea conveyed by *dharmatā* under (3) was of any relevance for the authors of the *TGS*. The fact that *dharmatā* is described as being encased in defilements does not mean that it was thought of as an actual entity. In the case of *buddhatva*, we encounter a similar figurative way of expressing its relation to living beings. On the other hand, as the verses demonstrate,⁹⁴ the term *dharmatā* alone, even without the specification that it is the *dharmatā* of the tathāgatas, must contain a clearly positive nuance. In these cases it cannot simply be understood as “essence, nature” but must have a weightier meaning, such as “true nature.” Alternatively, we could also assume that the first part of the compound *tathāgata-dharmatā* was simply dropped due to metrical needs, as is often the case in verses. If we follow this assumption, namely that *dharmatā* in the verses is to be understood as *tathāgata-dharmatā*, there will be no further need to argue that the meanings of *dharmatā* in the *TGS* go beyond those mentioned in (2).

If, on the other hand, we decide that the use of *dharmatā* in the verses does not allow us not to attribute a positive character to it, we shall have to admit that it must mean “more” than the alternatives mentioned under (1) and (2). To identify this *dharmatā* with the *dharmatā* of (3), namely the one, all-pervading absolute truth, would nevertheless not be in line with the sūtra itself. The contexts in which the term *dharmatā* appears for the most part involve living beings in the plural. The purport is clearly the fact that all living beings have *their dharmatā* rather than that a single *dharmatā* pervades them. The philosophical background can thus hardly be called monistic; if there are any monistic overtones at all, they are not intended by the authors. Accordingly, I think that the semantic range of *dharmatā* in the *TGS* occupies a position somewhere between (2) and (3) and is (not yet) thought of as a hypostatized unit.

If we turn to the two sūtras which, I believe, are most closely related to the *TGS*, namely the *Saddharmapuṇḍarikasūtra* and the **Tathāgatotpattisambhavanirdeśa*, it becomes clear that the term *dharmatā* in the meaning of “absolute truth” was likely not used in these texts.⁹⁵ Further, in the simile of the painted

⁹⁴ See 8.4 and 8.5. In 3.4 the *dharmatā* is characterized as “like mine.” The use of *dharmatā* there fits well into the semantic range of (2).

⁹⁵ Throughout the *SP* the term *dharmatā* appears only five times, among them once in the prose text (40.15), where it plainly means the “true universal law” in the second sense of (1) (see Zimmermann 1999: 157ff.). In *K* 57.13 (= 2.134), *K* 130.13 (= 5.38), and *K* 392.2 (= 20.1) *dharmatā* stands for this true law as the most fundamental teaching, and is in some cases rendered as such in the Tibetan and the Chinese translation by Kumārajīva: *K* 57.13: 說法之儀式; *K* 130.13: *chos*, 諸佛之法; *K* 392.2: *chos*. In *K* 294.14 (= 13.67) we find the pāda *bhāvīva dharmam ca sprṣīva dharmatām*. This part is missing in *D*₁ and *D*₂; *O* and the Farhād-Bēg ms read (*bo*)*dhi(m)* instead of *dharmatām*. The Tibetan follows, as usual, *K* (... *chos nyid reg*). Kumārajīva’s translation has 證諸實相, supporting the wording *dharmatā*, whereas Dharmarakṣa’s translation offers 正覺 (*bodhi*)—with the exception of two relatively late, and probably (in view of Kumārajīva’s translation of this passage) “emended” manuscripts which read 正典 instead. This is the only passage in the *SP* where *dharmatā* can but need not (given that it is the older reading) be interpreted in the sense of “absolute truth.” However, the fact that the Kashgar manuscripts usually contain the older wording suggests that the reading *dharmatā* is secondary (though it would be a *lectio difficilior!*). We are thus left with one very meager example of *dharmatā* in the meaning of an absolute entity.

In the *TUSN*, as far as I can see, the term *dharmatā* appears several times in the meaning “natural and normal custom,” “normal state” (1): *Q* 81a6 and 81b7: *chos nyid rab tu thob pa’i phyir* (**dharmatā-pratilambhāt*: “in a normal, natural way,” “naturally, automatically,” see also *BHSD* s.v. *dharmatā*); *Q* 100a8: *chos nyid thob pas* (**dharmatā-prāptena*: “naturally, automatically”); *Q*

cloth in the **Tathāgatopattisambhavanirdeśa*, the direct predecessor of the trope presented in the *TGS*, the term *dharmatā* does not appear. Instead, we are told only of *tathāgatajñāna*. If *dharmatā* in the passages of the *TGS* designated in fact the hypostatized “absolute truth,” this would mean that, when it came to the usage of this basic philosophical term, the authors of the *TGS* did not agree with the *Saddharmapuṇḍarikasūtra* and the **Tathāgatopattisambhavanirdeśa* but based themselves on a different terminological convention.

Be that as it may, the mention of the (*tathāgata-*)*dharmatā* serves to illustrate the buddha-nature of living beings and their essential equality with the *tathāgatas*.⁹⁶ Here also, as has already been observed in the case of *tathāgatajñāna*, *dharmatā* is described in a metaphorical setting: it is encased by defilements, and in OM even said to be motionless. All living beings have this true nature. It constitutes their essence, thus relegating all differentiating aspects of living beings to a provisional, contingent level.

Among other terms that render the idea of the buddha-nature in the *TGS*, we find the word *tathāgatadhātu*.⁹⁷ The term *dhātu* is well known from the Mahāyānist *Mahāparinirvāṇasūtra*, where it appears frequently in the compound *buddhadhātu*, synonymous with *tathāgatagarbha*, and obviously interpreted as a *tatpuruṣa* compound. *Dhātu* can have the very concrete meanings “mine,” “primitive matter” (called also *mahābhūta*), “element of the body” (the six elements are *pṛthivī*, *āpas*, *tejas*, *vāyu*, *ākāśa*, *viññāna*), the “group of eighteen *dhātus*” forming the six sense organs with their respective sense objects and the

140b1: ... *chos nyid rab tu thob pa dang* ... (**dharmatāpratīlambha-* “[Bodhisattvas gathered]..., automatically,...”) etc.; *dharmatā* as “rule, teaching” (1) in *Q* 138a5f.: *byang chub sems dpa' thams cad kyī chos nyid rtogs par khong du chud pa* (see *BHSD* s.v. *gatīmgata*; **sarva-bodhisattva-dharmatā-gatīm-gata*: “adept in all the rules for/teachings of the bodhisattvas”), in *Q* 141a1; 7f.: *de bzhin gshegs pa'i chos nyid mi 'phrog (pa)* (... *yongs su brjod* and *Q* 141a5f.: *de bzhin gshegs pa'i mnga' mi 'phrog pa'i chos nyid ... brjod* (**asamhāryā tathāgatadharmatā*: “[to utter] the irresistible teaching(s) of the *tathāgatas*”); probably in *Q* 138a1: ... *byang chub sems dpa' de ni / byang chub sems dpa'i chos nyid la yang dag par byung ba ma yin no //* (see *BHSD* s.v. *samudāgacchati*, °*te* and following entries; **bodhisattva-dharmatāyām asamudāgataḥ*(?): “That bodhisattva (who does not know about or believe in the magnificence of the *tathāgata*) has not accomplished the teaching for the bodhisattvas”(??); *TUSN_{CH2}*: 是等猶爲假名菩薩 (630a16f.); *TUSN_{CH3}*: 不得名爲眞實菩薩 (277c18f.)), in *Q* 141a3: *de bzhin gshegs pa'i chos nyid rab tu thob¹ pas* [¹ *Q*: *thos* corrected to *thob* according to *S* (186a5) and *TUSN_{CH2}*: 得如來法故 (278c4–5)] and probably in *Q* 139b7f.: *chos nyid rjes su bsnyegs pas bstan pa* (“(you) explained according to (**samanubandhena*) the teaching”; *TUSN_{CH2}*: 隨順深法 (630c11); *TUSN_{CH3}*: 隨順法性 (278b3)), though in the last case one could also approve the meaning “true, universal law” (1) or “absolute truth” (3); as “character,” “nature,” “disposition” (2) in *Q* 89b8–90a1 (verse); 90a2 (verse): *chos nyid tshul* (**dharmatā-yogena*: “(Rain water/The teaching of the Buddha becomes differentiated) according to the disposition (of the surface of the earth/of the disciples)”; unclear is the context and thus the meaning of *Q* 129b3: *chos nyid khong du chud pa'i tshul gyis* (**dharmatādhiyogena*: “according to the realization of the teaching/universal law/absolute truth(?)”); *TUSN_{CH2}*: 眞實法性故 (627c12); *TUSN_{CH3}*: 了於諸法眞實性故 (275c23)) and *Q* 138a5: *byang chub sems dpa' ... byang chub sems dpa'i dbang rang 'byung gi chos nyid la gnas* (**bodhisattva-vaśa-svayambhū-dharmatā*; the Chinese reads instead: *TUSN_{CH2}*: 於如來自在正法 (630a22f.); *TUSN_{CH3}*: 於佛自在 (277c24)).

⁹⁶ See OM: “And [the *Tathāgata*], having perceived inside those [sentient beings] defiled by all defilements the *tathāgatadharmatā* motionless and unaffected by any of the states of existence, then says: ‘Those *tathāgatas* are just like me!’”

⁹⁷ The term *tathāgatadhātu* appears once, in 8B (for details see my note in the translation). It is rendered in *Tib* with the term *rīgs*, which usually is applied as a translation for *gotra* or *kula*. On the term *dhātu* see also Seyfort Ruegg 1969: 261ff.

six forms of *viññāna*, “relics” or (in medical theory) “essential bodily ingredient/humor.” Especially the two meanings “relics” and “bodily element” seem to have had some influence on the genesis of the *buddhadhātu* theory of the *Mahāparinirvāṇasūtra*.⁹⁸ However, the main thrust of the term *buddhadhātu* in the *Mahāparinirvāṇasūtra* is to indicate the future possibility of all living beings becoming a buddha.⁹⁹ Though this understanding of *dhātu* as a cause stands in contrast to the above-mentioned substantialist background from which the term *dhātu* is believed to have emerged in connection with the *Mahāparinirvāṇasūtra*, it is not altogether surprising, since it can be an equivalent of *hetu*, as stated explicitly in, for example, *Ratnagoṭravibhāgavyākhyā* 72.10: *tat(=tathāgatatva)-prāptaye hetus tathāgatadhātur iti / hetvartho 'tra dhātvarthaḥ* !.¹⁰⁰ We further know that *dhātu* can, like the term *dharmatā*, also mean the “rule to which all *dharmas* are subject” and, again parallel to the development of the term *dharmatā*, can even take on the meaning of a metaphysical entity, in the compound *dharmadhātu*.¹⁰¹

How are we to understand the term *dhātu* in the passage in 8B? Let us first have a look at the quotation of the passage in the *Ratnagoṭravibhāgavyākhyā* and the context in which it is embedded there. The quotation appears after the last of three basic interpretations of the compound *tathāgatagarbha*. I cite the whole passage (72.7ff):

pañcabhir nidhitaruratnavigrahacakravartikanakabimbadr̥ṣṭāntais trividhabuddhakāyotpattigotrasadbhāvārtham¹ adhikṛtya tathāgatadhātur eṣāṃ garbhāḥ sarvasattvānām iti paridīpitam / trividhabuddhakāyaprabhāvitatvaṃ hi tathāgatatvam / atas tatprāptaye hetus tathāgatadhātur iti / hetvartho 'tra dhātvarthaḥ / yata āha / tatra ca sattve sattve tathāgatadhātur utpanno garbhagataḥ saṃvidyate na ca te sattvā budhyanta iti /

[¹ for the emendation °*sadbhāvārtham* for °*svabhāvārtham* see Schmithausen 1971: 157]

By way of the five similes of the treasure, the tree, the precious image, the universal emperor and the golden figures—with reference to the fact that the disposition (*gotra*) of the threefold body of the buddhas to manifest is present [in all living beings]—it has been shown that the tathāgata element (*dhātu*) is the embryo/germ (*garbha*) of all these sentient beings. [This can be said] because tathāgatahood is constituted by the threefold body of the buddhas. Therefore the cause of the attainment of that [threefold body] is called the “element (*dhātu*) of a tathāgata.” “Element” means here “cause” (*hetu*). Therefore it is said [in the TGS]: “And though in each sentient being the element (*dhātu*) of a tathāgata has arisen and is present as an embryo/germ (*garbhagata*), those sentient beings do not realize it.”

The general context here is an explanation of the three *svabhāvas* of the *dhātu*, namely *dharmakāya*, *tathatā* and *gotra*, the three key terms of verses I.27–28. These verses constitute the heart of the *Ratnagoṭravibhāga(vyākhyā)*, being a commentary on the central phrase *sarvasattvās tathāgatagarbhāḥ*. The passage translated above deals with the third aspect, namely the *gotra*, and contains the last of the three interpretations of the compound *tathāgatagarbha*. *Garbha* is here identified with *dhātu*, which is immediately afterwards defined as the “cause”

⁹⁸ See Seyfort Rugg 1969: 516, n. 1; 1976: 352f.; Shimoda 1997: 272; 276; Habata 1989; *Hōb* s.v. *Byō*.

⁹⁹ See Shimoda 1997: 272.

¹⁰⁰ For further references for *dhātu* in the sense of “cause” see Schmithausen 1969a: 114c; 145.

¹⁰¹ See Schmithausen 1969a: 147.

(*hetu*) of the attainment of buddhahood. Consequently *garbha* can here only have the meaning “embryo” or “germ,” which is the cause of living beings becoming tathāgatas. In order to reinforce its analysis, the *Ratnagoṭravibhāgavyākhyā* then cites the sentence from the *TGS*. The fact that this passage was cited by the authors of the *Ratnagoṭravibhāgavyākhyā* is probably not only due to the unique appearance of the term *dhātu* throughout the *TGS*, but also to the predicate *garbhagata*, which according to the *Ratnagoṭravibhāgavyākhyā* characterizes the *dhātu* “as an embryo” (see also *RGVV*; *snying por gyur pa*; the Chinese translation is here missing).

The interpretation of *garbhagata* as indicating a state or condition is grammatically possible. Further, in view of the fact that the five similes this explanation in the *Ratnagoṭravibhāgavyākhyā* refers to include the sprout in the seed and the embryonic emperor in the womb of the poor woman, the understanding of *garbha* as a germ or embryo is in fact plausible. However, the context in the *TGS* imposes a different conclusion as to how *garbhagata* should be understood. Both Tibetan translations of the *TGS* support the notion that *garbha* means “womb” or “inside” of living beings: *khong na yod (Tib)*; *snying po la gnas pa (Bth)*.¹⁰² This analysis of *garbhagata* as indicating a local relation (“within (living beings)” or “in the womb”) is likewise possible from the point of view of Sanskrit grammar and, for the unbiased reader, even much more reasonable.¹⁰³ But even leaving aside the two Tibetan translations that favor *garbha* as “inside,” there are three other arguments strongly supporting this understanding in contrast to the *Ratnagoṭravibhāgavyākhyā*.

One argument is found in the *Ratnagoṭravibhāga* itself, in the verses that freely render the simile in question: though it is true that verse I.122 compares the *dhātu* with the embryo of an emperor, in the following verse I.123 we find two concessive formulations: ... *garbhāntarasthe nṛpe* (“... though the king is found within the womb [of sentient beings]”); ... *sannātheṣu ca satsu ... svātmāntarastheṣv api* (“... even though the good protectors are found within [living beings] themselves.”). In both cases the main accent lies on the fact that the emperor or “protectors” are present *within* sentient beings, not on the fact that they are still embryos. The presence of the word *antara* does not allow for any ambiguity. This nuance was duly expressed by the Tibetan translators (*Tib*), in a word-play with *khong* (“inside”): ... *khong na yod kyang sems can de dag gis khong du ma chud do //*.

Right after the above sentence in question, the Tathāgata repeats the same message a second time in direct speech to living beings (8B.7–8). Nothing is said on this occasion about an embryonic state. Instead, mention is made of a tathāgata inside (the bodies) of sentient beings: *nang na (Bth)*; 身中 (*Ch*₂); 自身 (*Ch*₁); *Tib* has simply *khyed la*.

Finally, we have the evidence displayed by Hara (1994: 38, n. 4), who, if mainly with regard to the epics, states that *garbha* bears the meaning “womb”

¹⁰² *Ch*₂ takes *garbha* of *garbhagata* to be the buddha-store and not the womb: 具如來藏. *Ch*₁ offers no help here.

¹⁰³ The two interpretations perhaps do not lie very far apart, since speaking of the *dhātu* “in the state of an embryo” implies that it is present “in the womb” or “inside.” Nevertheless, if the *dhātu* is being described as just being “inside” living beings (a “neutral” formulation which the use of the term “embryo” would contravene), this does not mean that it has to be a *hetu*, as the *RGVV* would have it.

“when construed with words expressive of staying in, dwelling at,” and cites examples for *garbhastha*, °*gata*, °*vāsa* etc.¹⁰⁴

There is little prospect of settling the question definitely. However, arguing from the perspective of the *TGS* itself and the undoubtedly very old citations of the *TGS* in the verses of the *Ratnagotravibhāga*, we ought clearly to favor the latter alternative, though the (more recent) commentarial parts of the *Ratnagotravibhāgavyākhyā* and the general biological overtone of the *cakravartin* simile allow for a different opinion.

Now, what does this all mean for an understanding of the term *dhātu* in the *TGS*, the question that served us as the springboard for the above discussion? Once the reading of *dhātu* as *hetu* in the *Ratnagotravibhāgavyākhyā* is seen to have no validity for the passage in the *TGS*, we are free to speculate on the meaning of *dhātu* in the contextual framework of the *TGS*. We should therefore note what other terminology in the *upameya* of the present simile is used to designate the buddha-nature. In the direct speech of the Tathāgata in the second part of 8B, we find the term *tathāgata*; in the verses below, *dharmatā* twice appears. Neither of these words suggests the notion of “embryo.”

On the other hand, the *upamāna* of the same simile several times speaks of *sattva* (“life”) which enters the womb of the woman. The parallel to the passage under discussion is obvious: here also the *tathāgatadhātu* enters into living beings. The direct speech of the Buddha that follows is similar in structure. The Buddha speaks of “the tathāgata [who has] entered [and] is present within...” It thus seems that the *upameya* side of the simile has adopted the terminology of the *upamāna*—a phenomenon similarly found in the descriptions of the tathāgatas as encased in *kleśa* sheaths in the *upameya*. In any case, given the biological motifs throughout the simile, should we not assume that the single employment of the term *dhātu* in the whole sūtra is integrally related to this context? I think it likely that the author of the simile thought of the *tathāgatadhātu* as a constituent element within the body of living beings, just as *sattva* is in the womb of the poor woman. He could have had in mind the six elements of the body (see above), with the *viññānadhātu* as the most fundamental (in the sense of being constitutive of life) and central one (as underlying all other sense organs).¹⁰⁵ In analogy to these six elements, and to the *viññānadhātu* in particular, the *tathāgatadhātu* would be understood as another, even more essential (metaphysical) element of living beings, constituting and guaranteeing their inherent buddhahood.¹⁰⁶ Designating as it does an independent element of the body, the term *dhātu* would fit well into the biological framework of the simile. At the same time, *tathāgatadhātu* recalls the term *nirvāṇadhātu*, the sphere a person enters after liberation. The *TGS*, by replacing the term *nirvāṇa* with *tathāgata*-, would continue the work of the *Saddharmapuṇḍarīkasūtra* of pointing out the insufficiency of *nirvāṇa* as a goal and advancing the only destination really worth striving for in Mahāyāna, namely to become a tathāgata.

¹⁰⁴ This argument loses some of its force when, with an eye on the occurrence of the term *utpanna* before the compound *garbhagata*, we read Hara’s following remark that the meaning “embryo” is prevalent “when construed with words of production, conception, development, and others.”

¹⁰⁵ On *viññāna* as the (cosmic) element see Langer 2001: 43ff.

¹⁰⁶ See also the terms *citi-dhātu* and *ātma-dhātu* in the terminology of the Vedānta. These are employed to designate the true self of living beings. *Dhātu*, in these cases, clearly undergoes an extension of metaphysical meaning (see Schmithausen 1969a: 83).

We have seen that the buddha-nature of living beings is described with a great variety of terms in the *TGS*. The terminology includes markedly substantialist expressions, such as *buddha* and **jinakāya*, and even terms which figure in the *upamāna*—words like *nidhi* or *kośa*. *Tathāgatajñāna*, a term with strong ontological connotations, appears along with actual states of being, such as *buddhatva* and *svayāmbhūtvā*. With *dharmatā* we reach the other end of the scale, a term similar to *tathatā* in being bare of any concrete nuances, and in designating the nature of a tathāgata or, as some passages could imply, even absolute reality. Though the terms denoting the buddha-nature differ considerably in their degree of abstractness or substantialist connotations, the authors of the sūtra did not hesitate to use them all in the standardized metaphorical phrase “wrapped with sheaths of *kleśas*.” One characteristic of the *TGS* seems in fact to be this tendency to formulate the *upameya* with the help of vocabulary taken from the *upamāna*. The negligence in the choice of the basic terminology for designating sentient beings’ buddha-nature, on the other hand, shows, as will be demonstrated below, that the authors were more concerned to present this new idea effectively than to lay it out in clear philosophical terms.

All the terms used to designate the buddha-nature of living beings can be characterized as being associated with the level of perfect spiritual realization.¹⁰⁷ The notion of potentiality, implied in terms like “germ” (*gotra*) or “embryo” (*garbha*), is inherent to none of them. This is even more surprising in view of the fact that in two of the similes the counterpart of the buddha-nature in the *upamāna* seems to have causal force: the sprout and the *cakravartin* embryo. Though in these two illustrations they could have easily done so, obviously the authors were not interested in adding to their corpus of terms for the buddha-nature ones which carry the notion of potentiality. It appears to me that what the authors had in mind was, first of all, to stress the essential equality between living beings and the buddhas. They therefore had to choose a terminology which left no room for doubt about this basic fact. For them to speak in this context of an embryonic (*tathāgata-*) *garbha* or (-)*gotra* of living beings would not have served their ends.

If we compare all this with the conception of the buddha-nature in the simile of the **Tathāgatopattisambhavanirdeśa*, we can observe another characteristic of the theory in the *TGS*. The main aim of the **Tathāgatopattisambhavanirdeśa* is to describe the wonderful and incomparable nature of the Buddha’s qualities. The greatness of *tathāgatajñāna*, along with nine other characteristics, lies in the fact that it penetrates (*praviśati*) the mind of all living beings. It is in this context that the simile of the piece of cloth with the whole cosmos painted on it is expounded. The goal the *TGS* has set for itself, on the other hand, is not to describe and extol the limitlessness and greatness of *tathāgatajñāna*. The *TGS* seems to focus on the living being as the “container” or “owner” of *tathāgatajñāna*. Living beings are not simply perceived as the objects of the *jñāna* of the Tathāgata; they step into the foreground in their own right. Every single one of them is in possession of *tathāgatajñāna*. Seen from this perspective, *tathāgatajñāna* appears rather as an element segmented so as to be present in all living beings. The idea of a segmented *tathāgatajñāna* may not have been unknown to the author of the **Tathāgatopattisambhavanirdeśa*. This is

¹⁰⁷ This is not so if we take *tathāgatadhātu* in 8B as a cause, as suggested by the *RGVV* (see above).

documented in the *upamāna* of the simile where myriads of painted cloths appear as independent elements by analogy with *tathāgatajñāna*. Thus I do not wish to exclude the possibility that the philosophy of the **Tathāgatotpattisambhavanirdeśa* in fact propounds the idea of a multitude of fragmented buddha-knowledge which, while embedded in different living beings, penetrates each part the other. Nevertheless, the **Tathāgatotpattisambhavanirdeśa* seems rather to assume that the cosmos is penetrated by an all-pervasive ether-like *jñāna* in which living beings are embedded, whereas in the *TGS* the picture is clearly inverted; that is, *jñāna* is contained in the minds of living beings. This latter perspective allows the bulk of attention to be directed to living beings as autonomous subjects. This difference in perspective is also mirrored in the core statements of the *TGS* and the corresponding passage in the **Tathāgatotpattisambhavanirdeśa*. In the *TGS* the agents are living beings containing a tathāgata (*sadaivaite sattvās tathāgata-garbhāḥ*), whereas in the **Tathāgatotpattisambhavanirdeśa* the agent is *tathāgata-jñāna* in its diffusive power (*tathāgatajñānam ... sakalam anupraviṣṭam*; quoted in *RGVV* 22.10–11). Without this change in perspective the employment of terms for the buddha-nature with substantialist overtones would not have been possible in the *TGS*.

3.2 Becoming a Buddha

The *TGS* states that all sentient beings contain a tathāgata and are essentially equal to the tathāgatas. The sūtra, however, does not say that they themselves are therefore awakened and already tathāgatas. The reason why they cannot be said to have attained awakening is the fact that their essence is not yet purified from *kleśas*, which, in the metaphorical expression of the *TGS*, enwrap and pollute this essence. Only when these defilements (*kleśa*) have been removed will the essence of sentient beings become manifest to and efficacious for them. Thus the basic idea of the *TGS* is that sentient beings always partake of the nature of tathāgatas. This nature cannot essentially be affected by the defilements, because it is unchangeable. The *kleśas*, on the other hand, are said to be only *āgantuka* (4.3), that is, accidental in nature. They are removed in the process of purification so that finally the buddha-like nature will be revealed. The idea is best put into words in 8B, where the Buddha in a direct speech states that “... it will happen that one day the tathāgata [who has] entered [and] is present within you will become manifest” (**tathāgataḥ praviṣṭaḥ samvidyamānaḥ ... prādurbhaviṣyati*).¹⁰⁸ It is thus clear that becoming a buddha does not involve an essential transformation or generative causal act by which the gap between the state of being hindered by mental defilements and that of perfect awakening is bridged.

However, two of the *upamānas* appear to attest to a different view: the simile of the sprout in the seed and that of the future emperor in the womb of the poor woman. The sixth simile speaks of the sprout in a seed of a fruit. The seed is planted in the earth and becomes a big tree. Verse 6.4 explicitly compares the fact that the tree has grown from a seed to the awakening of sentient beings. Now, the sprout has to undergo different stages of growth and development before finally

¹⁰⁸ Tib: *khyed la de bzhin gshegs pa zhugs pa yod pa dus shig na 'byung bar 'gyur te /*.

turning into a big tree. From this one might expect that the buddha-nature of living beings is first something comparable to a sprout which gradually, by the transformational process of ripening, develops into an entity possessing buddhahood. Such an immature buddha-nature would thus be the cause of the attainment of awakening, just as the sprout in the seed generates the tree. But while this interpretation, especially in light of the later understanding of the term *tathāgatagarbha* as “buddha-embryo” or “buddha-germ,” could, *prima facie*, be felt to be what the authors of the *TGS* wanted to suggest, a closer look at the simile reveals that this is not the case.

What the authors have focused on in this simile is clearly found in verse 6.2, which states that the body of a *sugata* exists similarly to a cane seed in all living beings. This verse is revealing, since the authors could have chosen to use a term other than **sugatakāya* (such as, e.g., °*gotra* or °*garbha*). In other words, they could have expressed that the buddha-nature of sentient beings is still in need of further development.¹⁰⁹ Instead, they continue to employ the same terminology as in the similes before. This terminology, chosen to describe the process which makes the buddha-nature of sentient beings efficacious for the world, does not connote any kind of growing or ripening. Rather, as in the earlier similes, it is expressive of the purification (6B, 6.4) from the sheaths of defilements—a fact which may indicate that the authors had in mind not mainly the growing process of a sprout but its being enclosed in seed coverings and the outer fruit from which it must be separated.

Though the growing process of the seed is, of course, one important aspect of the simile, the main focus would seem to lie elsewhere. As in 6A and 6.1, the simile here affirms the imperishability of the seed, and the fact that the result (*kārya*), namely the tree, is already contained in the seed. It emphasizes that seed and tree are of the same nature. The seed, as *Ch*₂ has it, “realizes the quality of indestructibility as a result of the fact that the seed and sprout generate each other alternately....” The assertion by the authors of the *TGS* that the seed already bears the tree within itself certainly accords well with their “theory of revelation.” The figure offers correspondences to the full-fledged *tathāgatas* in living beings. The manifestation of these *tathāgatas* triggers the awakening of living beings. However, there is an important difference between this “tree” in the seed and the full-grown tree in terms of temporal development, even if it does not seem to be of relevance for the authors. What is decisive for them is the essential oneness of seed and tree. Nothing new has to be added; the complete tree is already found in the seed.¹¹⁰

In the simile of the poor woman the situation is similar. Though the embryo of a *cakravartin* in her womb could easily be compared to the germ or embryo of a buddha in living beings, the author prefers to employ *tathāgatadhātu* (8B), *tathāgata* (8B) and *dharmatā* (8.4, 8.5). Here again, the fact that the

¹⁰⁹ It is true that in 6B *dharmatā* is spoken of as *garbhagatā* or *garbhasthā*. I have argued in the note to my translation that these latter should be understood as “in the womb.” However, it could also be understood as “in the state of an embryo,” and we cannot, as a matter of fact, exclude outright the possibility that the authors used this ambiguous formulation to allow for both interpretations (see also above, p. 57f.).

¹¹⁰ For orthodox Buddhist thinkers the idea of the sameness of nature between seed, sprout and tree, and the existence of the tree in the seed (*satkārya*), would hardly hold water. Cp., for instance, the Buddhist *Śālistambasūtra*, where such ideas are strictly rejected as harboring the fault of eternalism (Schoening 1995a: 285ff.).

cakravartin is still an embryo does not seem to be crucial for an understanding of the simile. His nature, namely that of a *cakravartin*, will not change, his future rule is already preprogrammed, and the growth process the embryo is subject to does not figure in at all.¹¹¹ What the simile plays up, rather, is the striking contrast between the poor, ugly and pessimistic woman and the glory of the *cakravartin* inside herself. Still, this simile can easily give rise to a different view of the buddha-nature. Without the exact wording in mind, one is naturally tempted to compare the growth of the embryo to a continuous ripening process in sentient beings of their buddha-nature. To be sure, this would not be in line with the original intention of the authors, who favored a theory of manifestation.

Now, the idea that a full-fledged tathāgata is from the very beginning present in living beings raises serious problems for Buddhist philosophers. The *TGS* states that the tathāgatas inside are covered by defilements and that only through a process of purification can living beings become awakened. Nevertheless, sentient beings are said to be always essentially the same as the tathāgatas, and this immanence of the Absolute can easily lead one to downplay or even brush over the fact that between the state of being defiled and that of perfect awakening is a gap which has to be bridged. As seen above, the authors of the *TGS* do not seem overly cautious in this matter. They do not hesitate to attribute an obviously substantialist notion to the buddha-nature of living beings. More than the assumption of two qualitatively different stages of development, for them it is the gap between these two states that underlies the *efficaciousness* of sentient beings' buddha-nature, which can be realized only through a process of revelation.¹¹² They therefore did not expend much effort in choosing similes with a unified conception of the buddha-nature. This may also be resulting from the authors' very intention, which, as we shall see below, seems primarily to have been to present reasons why all living beings can become buddhas and, maybe even more importantly, to stimulate their readership, which had possibly hitherto not felt vitally drawn to Buddhist spirituality, to join the Mahāyāna community. The use of a philosophically and spiritually unsophisticated, imprecise and even ambiguous terminology, along with the substantialist and metaphorical formulation of the *upameya*, may have been considered necessary in order to attain their ends. It would therefore be wrong to expect elaborate explanations about the exact relation between the state of defilement and awakening. This painstaking work, whether intentionally or not, was left to later exegetes.

Regarding the attainment of awakening, the authors of the *TGS* do not tire of emphasizing that this leads to the performance of the tasks of a buddha. They obviously consider this fact as an automatic consequence of the manifestation of

¹¹¹ It is, however, probably no coincidence that the only passages where the terms *garbhagata* or *garbhastha* appear are in the similes of the seed and the poor woman. Although the translations of the *TGS* itself and the parallels in the quotation of the similes in the *RGV* interpret *garbha*^o as "inside," the other possibility, i.e. "embryo," cannot be ruled out.

¹¹² This becomes clear in the similes of the seed which already contains the whole tree, the embryo of the *cakravartin* in the womb of the poor woman, and in the simile of the *TUSN* where a cloth on which the whole universe is painted is found compressed to a small particle and has to be opened in order to achieve its effect. Thus, the counterpart in the *upamāna* to living beings' buddha-nature is not yet in a fully developed state; for it to manifest fully requires a further stage of ripening or expansion. But given that the sūtra stresses the essential sameness of the element in sentient beings before its revelation (when it is not yet efficacious) and afterwards (when it becomes so), this does not undermine the basic concept. We should not expect or claim an absolute isomorphic relationship between the *upamāna* and the *upameya* for all similes.

one's buddha-nature, and in several passages it alone is stated to be a characteristic of buddhahood. This in itself demonstrates that efficaciousness was a main category in the earliest stage of *tathāgatagarbha* thought. The reason for describing a tathāgata primarily in terms of dynamic activity may well lie in an attitude of worldly engagement predominating over mainly theoretical concerns.

3.3 How to Become a Buddha

The purification from the *kleśas* leads to the manifestation of buddhahood. Now, what are the factors leading to this purification? Let us first note in what terms the **Tathāgatotpattisāmbhavanirdeśa* deals with this question. There, when the Tathāgata sees that living beings are not aware of their *tathāgatajñāna*, he says (*RGVV* 24.4–7):

yan nv aham eṣāṃ sattvānām āryamārgopadeśena¹ sarvasamjñākṛtabandhanāpanayanam kuryām yathā svayam evāryamārgabalādhānena mahatīm samjñāgranthim vinivartya tathāgatajñānam pratyabhijānīran / tathāgatasamatām cānuprāpnuyuh / te tathāgatamārgopadeśena sarvasamjñākṛtabandhanāni vyapanayanti / [¹ āryeṇa mārgo° emended to āryamargo° according to Takasaki 1966: 397]

Suppose now that by teaching [them] the Noble [Eightfold] Path, I remove all the fetters from these sentient beings that are caused by [their wrong] conceptions, so that through attaining power [by following]¹¹³ the Noble Path they remove this big knot of [wrong] conceptions by themselves, recognize¹¹⁴ *tathāgatajñāna* [which penetrates them] and attain equality with the tathāgatas. Then, thanks to the tathāgatas teaching [them] the Path, they will get rid of all the fetters caused by [wrong] conceptions.

The passage is very clear in attributing the actual process of purification to sentient beings alone (*svayam eva*). The Tathāgata's role is limited to teaching them the Eightfold Path, thereby setting their purifying activities into motion. The text stresses that it is sentient beings themselves who remove their misconceptions and finally realize *tathāgatajñāna*. The verb used to describe this realization is *pratyabhijānīte*. It is here used in the sense of “to become aware of,” “to recognize” something which living beings have always been carrying around with them, namely *tathāgatajñāna*. This recognition is the result of living beings' practice along the Noble Path and coincides with the full manifestation of their *tathāgatajñāna*, the realization of their buddhahood. The verb from *pratyabhijānīte* implies, then, more than just the pure act of recognizing. According to the passage in the **Tathāgatotpattisāmbhavanirdeśa*, recognition can only take place when living beings follow the Holy Path. It is thus clear that the meaning of *pratyabhijānīte* in this passage goes far beyond the process of abstractly remembering the fact that one has the buddha-nature. Here, the term

¹¹³ My understanding of *āryamārgabalādhāna* follows from the two Chinese translations of the *TUSN* by Buddhahadra (修八聖道; *TUSN_{CH2}* 624a20) and Śikṣānanda (修習聖道; *TUSN_{CH3}* 273a1), along with the Chinese translation of the passage in the *RGVV* (修八聖道; in Nakamura 1961: 46.4).

¹¹⁴ The verb *pratyabhijānīte* is not very common in Buddhist texts. Seyfort Ruegg (1973: 78) understands it as “la re-connaissance (ou *anagnosis*) de la réalité” in contrast to the Buddhist notion of “compréhension (*adhi-gam-*).” In the same passage he also provides us with several occurrences of the term in non-Buddhist schools. It is impossible to know if the verb appeared in the *TGS*, since the Tibetan does not have a standardized translation for it.

implies a fundamental change brought about by the adoption of certain rules that lead to the full manifestation of buddhahood. In the lines before the passage cited above, the Buddha had stated that, as long as living beings are defiled by wrong conceptions, they would not “be aware of” and not “realize” their *tathāgatajñāna*. Four verbs are used in these lines, and we can see that they cover the meaning contained in the verb form *pratyabhijānīte*. These verbs are *jānanti*, *prajānanti*, *anubhavanti* and *sākṣātkurvanti* (24.1).¹¹⁵

If we now turn to the *TGS*, we see that the process of purification is described in very similar terms. There, however, the distinction between the activity of the Tathāgata, on the one hand, who teaches the Dharma and thereby makes sentient beings know that they themselves have the buddha-nature, and living beings’ own efforts, on the other, is less clear. It seems to me that the simile in the **Tathāgatotpattisambhavanirdeśa* already bears the seeds of such ambiguity. It is quite evident that the authors of the **Tathāgatotpattisambhavanirdeśa* stressed sentient beings’ contribution with the words *svayam eva*, while at the same time specifying the exact nature of the Buddha’s role in clearing away all doubt: the Buddha’s teaching activity, which leads to the realization of *tathāgatajñāna*; it is “attaining power [by following] the Noble Path” (*āryamārgabalādhānena*) that capitalizes on this activity. This clarification seems necessary, since otherwise one may be inclined to read the situation according to the *upamāna*, where it is the skilful person alone who makes the compressed cloth useful for the whole world.

In the *TGS* such clarifications are only sporadically found. In most of its similes it is a single person who knows about the precious hidden substance and purifies it. In several passages this person is explicitly compared to the Tathāgata. The most common formulation in the *TGS* is expressive of finality: the Tathāgata teaches the Dharma *in order to* purify sentient beings. Of course, such a statement could mean that the Tathāgata directly destroys the *kleśas* of sentient beings, but it could also be understood in the sense conveyed in the **Tathāgatotpattisambhavanirdeśa*. Formulations in the simile of the golden figures in the molds are suggestive of the former alternative. There it is stated that the Tathāgata with “the *vajra*[-like] hammer of the Dharma ... hews away all outer defilements in order to entirely purify the precious tathāgata-knowledge ...” (9B) “so that their defilements are expelled without any remainder.” (9.4). However, it is hardly imaginable that this is to be taken as denying any kind of participation of sentient beings in the process of their own purification. It signifies rather that the authors tried to treat the two sides of the simile isomorphically, adopting the framework of the *upamāna* when comparing the Tathāgata to the smith.

We do in fact find some passages in the sūtra indicating clearly the active role sentient beings themselves play in the process of purification. The most representative among them is in 1B, where it is said that the Buddha teaches sentient beings the Dharma and leads them to have faith (*mos*) in order to destroy their defilements. Sentient beings then apply (*abhiyujyate*) themselves assiduously

¹¹⁵ In the *TGS* the Tibetan does not allow the exact Sanskrit terms to be reconstructed where it is said that sentient beings “realize” (*khong du chud pa*) their buddha-nature after learning about it through the teaching of the Tathāgata. It is quite possible that any such Sanskrit term could be understood in both ways, i.e., “to become aware” and “to accomplish.” The former alternative would entail that the knowledge of the presence of a buddha within was considered as leading to awakening.

to these teachings and become free from their defilements.¹¹⁶ Again, in 5B and 5.5 sentient beings or bodhisattvas are said to acquire faith in the teaching of the Buddha, which later, when they exert themselves (5.5), leads to their awakening. In 5.4 we find an exhortation in which the Tathāgata calls upon the bodhisattvas to “take the treasury of knowledge” and to become protectors of the world. Finally, in the simile of the poor woman the Tathāgata calls upon sentient beings to exert the energy which will lead them to realize buddhahood.¹¹⁷

From the passages mentioned above it becomes obvious that living beings were expected to participate in the removal of their defilements. Nevertheless, under the sway of the august figures in the *upamānas*, the authors did not hesitate to use formulations which leave no or else very little room for the participation of living beings. Two consequences can be drawn from this observation. First, it demonstrates that the purificatory work of the Tathāgata was conceived as the main factor in the process of manifesting living beings’ buddha-nature. It seems in fact to go far beyond his activity of teaching the Dharma. Secondly, the sūtra touches only sporadically on the question what sentient beings have to do to attain awakening, when it refers to the very general notions of “faith in the Dharma” and its practice. This shows that the details of the process of purification were not an integral part of the message which the authors wanted to convey. Therefore they did not elaborate this point any more than they provided an exact definition of the buddha-nature—tasks they left for later systematizers. Other means of awakening (recitation etc.) suggested in the sections following the similes are a general feature of many Mahāyāna sūtras, and thus not peculiar to the theory of the buddha-nature. This, of course, does not mean that the authors of the *TGS* did not consider it appropriate to practice them.

4. The *TGS* as a Part of Indian Buddhism: Its Sources, Motives and Reception

The title of this section may raise expectations which cannot be fulfilled, among them successfully tracing the roots and defining the position of the *tathāgatagarbha* teaching against the background of a comprehensive history of Indian philosophy in general, and in particular its relation to the *upaniṣadic* notion of *ātman* and the Pāśupata doctrine of *abhivyakti*, which latter concept, namely liberation as the manifestation of the innate Śiva’s perfections through the removal of impurities (*mala*), is strikingly similar. I restrict myself to delineating only a few aspects of the sūtra’s relation to other Buddhist texts. Likewise, I cannot here deal with the development of *tathāgatagarbha* thought in Tibet and China. For the Indian region, my central ideas about post-*TGS* developments are based on Takasaki 1974, a work which has remained the point of departure for any serious historical study of the *tathāgatagarbha* teaching in India.

In Tibet, the teaching of *tathāgatagarbha* became a highly controversial issue in the well-known *gzhan stong* and *rang stong* debate among the Buddhist schools. The proponents of *gzhan stong* (“other-empty”) believe that the inherent

¹¹⁶ A similar conclusion is reached at the end of 5A. There it is said that as a result of not hearing of the buddha-nature sentient beings do not apply themselves to their purification.

¹¹⁷ There seems to be no clear distinction between normal living beings (*sattva*) and bodhisattvas in the *TGS*, except for a passage in 8B where the threefold categorization *sattva* – *bodhisattva* – *tathāgata* appears (cf. p. 74).

buddha-nature of living beings is essentially empty of defilements and so, in this regard, come very close to the position of the *TGS*, which they take literally, while the *rang stong* (“self-empty”) position is that the texts of the *tathāgatagarbha* teaching have to be interpreted on the basis of and harmonized with other major Buddhist tenets, such as the doctrine of emptiness (*sūnyatā*)—which finally led to the identification of the *tathāgatagarbha* (“buddha-embryo”) with *sūnyatā*.

In China, the *tathāgatagarbha* teaching gained philosophical importance by way of the *Ratnagoṭravibhāga* and the *Dacheng qi xin lun* 大乘起信論. Opinions differ about how deeply it has in fact penetrated Chinese Buddhist thought, but without doubt it found fertile soil among Daoist teachings which were professing belief in an “original pure essence” before the arrival of Buddhism in China. With the rise of the concept of “original awakening” 本覺 in the *Dacheng qi xin lun* and its fusion with tenets of Yogācāra thought, however, the buddha-nature theory in China merged into a philosophy with a strongly monistic orientation—something the *TGS* had not foreseen but nonetheless prepared the way for. This monistic position, which later took on more extreme forms, as in the attribution of the buddha-nature to the non-sentient realm, became the object of scholarly criticism at the end of the 20th century. The arguments of its critics, namely that this position, during parts of Japanese social and political history, was all too easily misused as a repressive tool to ensure the status quo, should certainly not simply be brushed aside.

4.1 The Titles of the *TGS*

The Sanskrit title transmitted to us at the beginning of *Tib* is *Ārya-tathāgatagarbha-nāma-mahāyāna-sūtra*.¹¹⁸ In the middle of the *sūtra*, however, when the Buddha refers to the *TGS*, the title is given as *Tathāgatagarbha-nāma-vaipulya*(or: *vaitulya*)-*sūtra* (0L). This name is confirmed by both Chinese translations, which in the *sūtra* itself as well as at the beginning of it speak of the 大方等如來藏經 (*Ch*₁; within the *sūtra*: 大方等經名如來藏) and 大方廣如來藏經 (*Ch*₂). Both 方等 and 方廣 are here renderings of *vaipulya* or *vaitulya*.¹¹⁹ (The word *da* 大 was probably added without having any direct correspondence in the Sanskrit.) We naturally should assume that the title as it appears at the beginning of a text is subject to alterations to a higher degree than a citation of it in the middle of one. This would mean that the title appearing in 0L, namely *Tathāgatagarbha-nāma-vaipulya*(or: *vaitulya*)-*sūtra*, was the name used in the earliest times, since it was faithfully transmitted by the Chinese versions, so that *mahāyāna*, which replaced *vaipulya* (or: *vaitulya*), as mirrored in both Tibetan versions, must be of later origin. The *Ratnagoṭravibhāgavyākhyā* refers to the *TGS* twice under the short title *Tathāgatagarbhasūtra* (25.9; 66.18).

¹¹⁸ In *Bth* the Sanskrit transliteration lacks *ārya* and *nāma*. *Ārya* (*phags pa*) is also missing in the Tibetan title of *Bth*, and this could thus be a characteristic of pre-standardized texts (see part II, C 1: *Bth*), but the equivalent of *nāma* is found in the Tibetan title of *Bth* (*zhes bya ba*), and so was probably erroneously omitted in the Sanskrit transliteration.

¹¹⁹ See Karashima’s textual study on the *SP*, where he argues that Dharmarakṣa chose the characters 方等 in order to render Skt. *vaitulya* (in association with Skt. *tulya*, “equal to”), while the characters 方廣 have their counterpart in Skt. *vaipulya*. He also points out the problem in deciding which of the two forms (*vaitulya* or *vaipulya*) was the original one (Karashima 1992: 278).

4.2 The Recorded Chinese Translations of the *TGS*

Besides the two available Chinese translations by Buddhahadra and Amoghavajra, the Chinese catalogues mention two other translations, which are now lost. The oldest record is contained in the *Chu sanzang ji ji* 出三藏記集 (*CSZJJ*), a work published in about 515 CE by Sengyou 僧祐.¹²⁰ It mentions a sūtra called *Da fangdeng rulai zang jing* 大方等如來藏經 (9c20) and states that in (an/the) old catalogue(s) it is called *Fo zang fangdeng jing* 佛藏方等經.¹²¹ Together with three other works,¹²² it attributes this translation to Faju 法炬, a translator active towards the end of the Western Jin 晉 dynasty at the time of the emperor Hui 惠 (290–306) and Huai 懷 (307–311). As to the translation of Buddhahadra, the *CSZJJ* does not provide us with information concerning the exact date and place it was done. It does state that according to other sources it was called *Rulai zang* but that it was currently missing (11c15: 或云如來藏。今闕。). According to the *CSZJJ*, the *TGS* thus appeared in two different translations, one each by Faju and Buddhahadra (14b13: 二人異出).

In the later *Zhongjing mulu* 衆經目錄 (*ZJM*) by Fajing 法經 and others dating from 593 CE, we come across some new information. Buddhahadra's translation of the *TGS* is there said to have been undertaken in the Yixi 義熙 period (404–418), and Fali 法立 is mentioned together with Faju as joint translators of the same text (117c16). I will come back to this below.

The next catalogue, the *Lidai sanbao ji* 歷代三寶紀 (*LSJ*) by Fei Changfang 費長房, dating back to 597 CE, bears witness again to a different state of affairs. First of all, Fei Changfang mentions a further translation of the *TGS*, the *Da fangdeng rulai zang jing* 大方等如來藏經 (66b2) attributed to Fazu 法祖 (religious name: Bo Yuan 帛遠) (66b17f.). About Fazu, we know that he was active during the reign of Emperor Hui (290–306), and it seems that he had close relations with Dharmarakṣa.¹²³ Fei Changfang ascribes to him 23 sūtra translations which, according to the *Gaoseng zhuan* 高僧傳 (*GSZ*), were lost in a time of troubles, and states that he himself had made a title list of 22 formerly unmentioned works,¹²⁴ among them the *Da fangdeng rulai zang*. About the other early translation of the *TGS*, attributed to Faju 法炬 by the *CSZJJ*, the *LSJ* states that it was translated by Faju together with Fali 法立 (as we have already seen in the *ZJM*) and it restricts the period of translation to the reign of Emperor Hui 惠 (66b26–27). While we do not know where the information about the common

¹²⁰ See Zürcher 1972: 10f.

¹²¹ See 9c20: 舊錄云佛藏方等經; the question what exactly is meant by the expression 舊錄 is complex, and has until now not been answered satisfactorily. It could be a part of Daoan's old catalogue, the famous catalogue of Daoan itself, another catalogue, or even a group of other catalogues. See Tokiwa 1938: 36–41; 96; 683.

¹²² Namely the *Lou tan jing* 樓炭經 (*T* 23), the *Faju ben mo jing* 法句本末經 (*T* 211), and the *Futian jing* 福田經 (*T* 683) (9c19–22); the *CSZJJ* states that the latter two sūtras were translated by Faju together with Fali 法立 (10a1–3). See also *CSZJJ* 98a28–29 (without any reference to the *TGS*).

¹²³ Zürcher sees relations being maintained between Fazu and one of the collaborators of Dharmarakṣa (1972: 76f.); Tsukamoto states that he was a disciple of Dharmarakṣa (Tsukamoto 1985: 730).

¹²⁴ *LSJ* 66b17–20, based on *GSZ* 327b28–29 (= *GSZ_{RS}* 40f.). In the *CSZJJ* (9c16–18) and the *Zhongjing mulu* 衆經目錄 (*ZJM*; 122c19–20 and 116b6), however, only the *Wei dai pusa jing* 惟逮菩薩經 is ascribed to Fazu.

translation of the *TGS* in the two catalogues comes from, the dating of it to the reign of Emperor Hui can be explained by another passage in the *LSJ* which states that Faju, after the death of Fali, continued to work alone on the translation.¹²⁵ We thus should conclude that, according to the *LSJ*, the period of activity of Fali was limited to the reign of Emperor Hui.

Regarding Buddhahadra's translation, the *LSJ* provides us with the date 420 CE (元熙二年) and gives the Daochang temple (道場寺) in Nanking as the translation site (71a13). However, the *LSJ* considers this translation to be, chronologically, the second one, and characterizes it, strangely enough, as "little different" (小異) from Fali's (71a13–14). It remains unclear why the translation by Fazu, which the same catalogue is the first one to mention, is not counted. In all following catalogues it is dealt with as the third one.¹²⁶ From then on newly compiled catalogues do not contain any further information, so that we are left to sort out the contradictions of the available catalogues by ourselves.

Let me first deal with the translation attributed to Fazu. Whereas both the *CSZJJ* and the *ZJM* attribute only one sūtra to Fazu, namely the *Wei dai pu sa jing* 惟逮菩薩經, Fei Changfang states that he consulted other catalogues and could identify 22 further texts translated by him.¹²⁷ Now, Fei Changfang, the compiler of the *LSJ* is well known for his practice of attributing hitherto unknown or undetermined works to various translators without revealing his sources, basing himself on catalogues that he never could have seen or failing to provide any other convincing arguments.¹²⁸ This, though, is not sufficient grounds for discrediting all the new information he came up with. It is obvious that he had access to a different, and in several respects, more comprehensive set of catalogues,¹²⁹ and it would be wrong simply to disregard all his assertions. The attributions to Fazu do, however, seem not very convincing. There is a remark in the biography of Fazu in the *Gaoseng zhuan* 高僧傳 to the effect that besides three works whose titles are given, he also translated several short texts no longer found, and whose titles were even no longer known.¹³⁰ Fei Changfang toned up this remark, and so contributed to the glory and fame of Fazu and his era. Tokiwa, in an extensive analysis of the attribution of the 23 works, understandably laments the fact that Fei Changfang simply mentions "several miscellaneous catalogues" (諸雜記錄) without specifying his sources.¹³¹ Of the 23 works, only five are extant today.¹³² That some of the other remaining 18 attributions to Fazu were already doubted at an early date is proved by the *Kaiyuan shijiao lu* 開元釋教錄 (*KSL*), which singles out

¹²⁵ *LSJ* 68a7–10: 惠帝世沙門釋法炬出。初炬共法立同出。立死炬又自出。多出大部與立所出每相參合廣略異耳。 A reference to the death of Fali is also contained in the *CSZJJ* (98b1).

¹²⁶ See Tōdō 1959: 1.

¹²⁷ *LSJ* 66b17–20. The *Gaoseng zhuan* 高僧傳 attributes three works to Fazu (327b27; *GSZ_{RS}* 40f.), among them the 惟逮菩薩經, which is also included in the list of 23 works in the *LSJ*. The titles of the other two works, however, are not found in the Fazu passage of the *LSJ*.

¹²⁸ See e.g. Hirakawa 1978: 28f.; 36; 37ff.; 44.

¹²⁹ See e.g. Hirakawa 1978: 39.

¹³⁰ See *GSZ* 327b27ff.=*GSZ_{RS}* 40f.

¹³¹ Tokiwa 1938: 704; his analysis is found on pp. 703–707.

¹³² Namely *T* 5; 144; 330; 528; 777. These same five texts were already the only ones extant at the time another catalogue, the *Kaiyuan shijiao lu* 開元釋教錄 (*KSL*; *T* 2154) of 730 CE, by Zhiseng 智昇, was being compiled (498b28–c4).

seven titles from the list of Fei Changfang as of questionable authorship.¹³³ However, the 大方等如來藏經 does not share such doubts.

Tokiwa, for his part, makes clear that the translation of the *TGS* attributed to Fazu is very unlikely. He assumes that this attribution resulted from an entry which ascribes a translation of the *TGS* to Faju of the same period, whence it was erroneously attributed to Fazu. This is thus a classical case of “multiple attribution.”¹³⁴ We can, of course, not be absolutely sure that Tokiwa’s conclusion is right. However, the fact that nothing about the translations is mentioned in the older catalogues, the circumstances of the relatively late attribution to Fazu, and Fei Changfang’s silence about his sources should make us skeptical. Finally, we can also interpret the above-mentioned fact that the *LSJ* considers Buddhahadra’s translation of the *TGS* to be the second one as an indication that its own new attribution of a third translation to Fazu lacked enough grounding to have any effect on the hitherto transmitted information about the *TGS* having been translated only twice.

If we now turn to the translation of the *TGS* by Faju, or by Faju together with Fali, as the later sources have it, the basis for such an assumption appears much more solid. As stated above, the existence of such a translation is already attested in the oldest existing catalogue, and, furthermore, both Tokiwa and Hayashiya include the entry in their reconstructions of the catalogue of Daoan, on which the *CSZJJ*, to a large extent, is based.¹³⁵ In the concerned entry, the *CSZJJ* notes below the sūtra title that in an/the old catalogue(s) the text was named *Fo zang fangdeng jing* 佛藏方等經 (9c20: 舊錄云佛藏方等經). It is not entirely clear to which catalogue(s) this remark refers. Tokiwa states that in this case it should undoubtedly be understood as referring to Daoan’s catalogue,¹³⁶ but Hayashiya tends to believe that the words 舊錄, when appearing below the main entry, consistently mean the catalogue of Zhu Daozu 竺道祖 of 419 CE.¹³⁷ As the more than one thousand pages each of Tokiwa and Hayashiya document, the study of the Chinese catalogues is a painstaking and complex endeavor. I myself have nothing to contribute to a final solution to the questions raised by the expression 舊錄. The issue is of relevance for deciding whether the title 大方等如來藏經 appears as such in Daoan’s catalogue or whether it was introduced by Sengyou on the basis of, for example, the existence of the same title for Buddhahadra’s translation. Further, even if we assume that the title 佛藏方等經, below the main entry, derives from the later catalogue of Zhu Daozu (and not from Daoan’s catalogue), can we be absolutely sure that the title 大方等如來藏經 and the titles generally found in the *CSZJJ* appeared as such in Daoan’s catalogue?

This question is not dealt with by the two great Japanese pioneers of catalogue research, and they seem to take it for granted that Sengyou’s avowal that he was following Daoan’s catalogue guarantees the authenticity of titles. It is only

¹³³ *KSL* 499a11–19.

¹³⁴ Tokiwa 1938: 381; 683; 704.

¹³⁵ *Ibid.*, 168; 381; 583; 678; Hayashiya 1940: 406.

¹³⁶ Tokiwa 1938: 683: “又、祐の舊錄とは、必ずや「安録」なるべしと思はる。” In a more general analysis of what could be meant by the words 舊錄, he comes to the conclusion that they stand for Daoan’s catalogue along with three other ones. He assumes that among these four catalogues it is the catalogue of Zhu Daozu 竺道祖, completed in 419 CE, which is meant in most of the cases (Tokiwa 1938: 40f.).

¹³⁷ See Hayashiya 1940: 366f. Harrison (1990: 210) doubts Hayashiya’s conclusion, since the “Old Catalogue” is also cited for works translated after 419 CE.

in a short passage that Tokiwa, when expounding the principles guiding his reconstruction of Daoan's catalogue, touches on this issue.¹³⁸ In this passage he deals with a statement found at the beginning of Sengyou's list of sūtra titles which had not been attributed to an author by Daoan (新集安公失譯經錄).¹³⁹ Sengyou there describes the extreme brevity of Daoan's entries and the poor state of the copy of the catalogue: titles were abbreviated with only two characters, the number of *juans* 卷 were not mentioned, the lines remained without a space in between, confusion caused by later scribes (後人傳寫) in regard to titles and to the number of works was normal, and doubts arose because punctuation marks formerly written in red ink had vanished. Since this description is not found at the beginning of Sengyou's catalogue, I am not sure if we should assume that it refers also to the part before, where the entry of the *TGS* is situated. Tokiwa notes that Sengyou's work itself included the complementation of such abbreviated titles, and stresses that we can no longer know where the line between Daoan's original entries and Sengyou's additions should be drawn.¹⁴⁰

In any case, we can be sure that at the time of Daoan (314–385), whose catalogue is widely esteemed as a scholarly work of the highest standard,¹⁴¹ a text called 佛藏方等經 or even 大方等如來藏經 was known and attributed to Faju.

We are now faced with three basic possibilities regarding the title of the *TGS* attributed to Faju:

- (1) The title 大方等如來藏經 or an appropriate two-character abbreviation (如藏?) already appeared in Daoan's catalogue. 舊錄 in the annotation of Sengyou refers to the catalogue of Zhu Daozu 竺道祖, where 佛藏方等經 is given as another name of the sūtra. For the alleged identity between the 佛藏方等經 and the 佛藏大方等經 (the title of a sūtra in the later catalogues) see below.
- (2) The title 大方等如來藏經 was associated in other catalogues with Faju. Sengyou concluded that it was probably identical with the 佛藏方等經 listed in the catalogue of Daoan. He was referring to Daoan's entry when he wrote 舊錄.
- (3) Sengyou, concluding that the sūtra listed under the title 佛藏方等經 or 佛藏 in Daoan's catalogue was a different translation of the text translated by Buddhahadra, "modernized" the title according to this latter translation. The title 佛藏方等經 in the annotation could, however, also have come from Zhu Daozu's catalogue. If the title found in Daoan's catalogue was 佛藏, Sengyou would have understood 佛 to be an abbreviation for 如來.

These three possibilities indicate in themselves how much we are forced to work on the basis of assumptions when dealing with early Chinese catalogues. Thus, in

¹³⁸ See Tokiwa 1938: 94–96.

¹³⁹ See 16c8–17.

¹⁴⁰ See Tokiwa 1938: 95. Tokiwa obviously holds that when Sengyou states that the sūtra titles in Daoan's catalogue consisted only of two characters, he is referring to the titles at the top of the main entries. The passage in question runs as follows: 注目經名撮題兩字。(16c12). The expression 注目經名, however, could, even if this is much less likely, also be interpreted as alluding exclusively to the cases where Daoan provides further information on the texts in the annotations below the main entries.

¹⁴¹ See e.g. Hirakawa 1978: 31.

contrast to his clearly noting that the translation of Buddhābhadrā was lost,¹⁴² we do not know if Sengyou had access to a copy of Faju's translation. The identification of the *TGS* with the 佛藏方等經 is therefore especially troublesome, and can hardly be accepted without reservations.¹⁴³ It is very likely that Sengyou only knew the title from a catalogue, namely the 舊錄, and so had no chance to compare the sūtra's content with what he knew about the *TGS*. It is true, as already remarked, that 佛藏方等經 could easily be a rendering of the title of the *TGS* as it appears in the text itself (OL), namely *Tathāgatagarbha-nāma-vaipulya-sūtra*, assuming that *tathāgata* was turned into 佛. However, the character 藏 seems to have been used from earliest times to render different Indian terms, so that 佛藏 could also be a translation of *buddhakośa*, °*gotra*, °*nidāna*, °*piṭaka* and the like, while the addition 方等 for *vaipulya* appears frequently in the *CSZJJ*. Further, we know of the existence of a sūtra called 佛藏大方等經, which appears for the first time in the *Zhongjing mulu* 衆經目錄 (119c24), where it is classified as a different translation of a part of the 華嚴經 and where the titles 問明顯經 and 明難品 are given as alternatives. In the *LSJ*, in one of its typically not quite reliable entries, we learn that the same sūtra is a translation of Daoyan 道嚴 made during the Song 宋 period and that a different title for it is 問明顯經.¹⁴⁴ This information appeared from then on in the catalogues. The sūtra is not extant, and again we can only speculate. Tokiwa, following a note in the *KSL*,¹⁴⁵ tends to believe that the *Nei zang da fangdeng jing* 內藏大方等經 was identical with the 佛藏大方等經 and adds that it should have been the 大方等如來藏經 of Faju.¹⁴⁶

All of this demonstrates that there cannot be any definitive answer to the question what Indian work lies behind the title of a Chinese translation which has not come down to us. Still, the information regarding the *TGS* translation by Faju seems quite solid, based as it is on the catalogue of Daoan. The crucial point is the title attributed to it by Daoan, a problem which I cannot solve with precision. If we accept the first possibility above, there is no reason to doubt the early existence of Faju's *TGS*. In both other alternatives, based on the reading 佛藏 instead of the 如來藏 of Daoan's catalogue, we are on less reliable ground. The annotation by Sengyou (舊錄...) thus complicates matters, but at the same time it hints at where the source of a possibly mistaken identification of Faju's translation with the *TGS* could be. For the time being we can only note that there is not too much reason to doubt the attribution of the *TGS* translation to Faju. It is to be hoped that the future will bring a comprehensive study of the terminology and abbreviations involved in the early Chinese catalogues.

There are some other irregularities concerning the *TGS* in the catalogues that deserve our attention. I have no concrete idea how to solve them, and thus shall restrict myself to simply mentioning them. First, there is the fact that the *CSZJJ* in the 13th *juan* on the biographies of important monks (where, in an afterthought to Dharmarakṣa, Faju and Fali are also treated) speaks of two translations done by

¹⁴² See 11c17: 今闕.

¹⁴³ The title 佛藏方等經 is, however, except for the rendering 佛 in regard to *tathāgata*, a perfect translation of the original Sanskrit title of the sūtra: *Tathāgatagarbha-nāma-vaipulya* (or: *vaitulya*)-*sūtra*. The character 大 of the later Chinese versions has not been added to 方等 in the translation of *vaipulya* (or: *vaitulya*).

¹⁴⁴ 94a3ff.

¹⁴⁵ See 502a12: 內藏大方等經一卷 (今疑是佛藏大方等經).

¹⁴⁶ Tokiwa 1938: 768.

Faju together with Fali, but of only one, the *Lou tan jing* 樓炭經, done by Faju alone.¹⁴⁷ This is clearly in contrast to the two other passages in the same catalogue where the 大方等如來藏經 of Faju is mentioned. Is this an unintentional omission, or should we assume that the biography comes from a different strand of transmission, one that does not know of a fourth translation by Faju?

Equally surprising is the statement in the *CSZJJ* that the 大方等如來藏經 of Buddhahadra is lost.¹⁴⁸ A survey of the 11 works attributed to Buddhahadra in the *CSZJJ* shows that among them four are said to be lost: the 大方等如來藏, the *Xin wei mi chi jing* 新微密持經, the *Ben ye jing* 本業經, and the *Jing liu boluomi jing* 淨六波羅蜜經. Out of these four, only the 大方等如來藏經 is extant today, whereas in subsequent catalogues the other three are either confirmed to be lost or said to be just different names for other works translated by Buddhahadra which never had really been lost. It is also striking, then, that among the four translations attributed to Faju in the *CSZJJ* it is the *TGS* alone which has not come down to us.¹⁴⁹

Regarding the dates of the translations of the *TGS*, I will not go into detail in the case of the first, ascribed to Faju. The different attributions, once to Faju alone, and later to Faju together with Fali, and even to Fali alone, need not overly concern us. For our inquiry the period from 290 till 311, namely the years of Faju's activity, will be sufficiently precise.

For the second translation, by Buddhahadra, we find, as mentioned above, two sources containing conflicting information. The *LSJ* provides us with the date 420 CE (元熙二年) and mentions the Daochang temple (道場寺), while the *Zhongjing mulu* 衆經目錄 states that the translation took place in the Yixi 義熙 period (404–418). No dates and places are given in the colophons. Nor does the oldest catalogue contain any information about the circumstances surrounding this translation. Obviously, the two relevant catalogues must be based on distinct sources. The following catalogues only repeat the one or other alternative. Neither

¹⁴⁷ 98a27–29.

¹⁴⁸ 11c18.

¹⁴⁹ See *KSL* 505b20–c23 and Tokiwa 1938: 770–772. A tempting way to explain the reportedly missing translation of Buddhahadra in the *CSZJJ* is to assume that Sengyou erroneously considered Buddhahadra's to be in reality Faju's translation. This would also answer the question why, if the words 舊錄 in the *CSZJJ* do in fact refer to Daoan's catalogue, the title 大方等如來藏經 (which is also the title of Buddhahadra's translation) was adopted as the main entry. As to the translation attributed to Faju, which for the first time is mentioned as lost in the 衆經目錄 of the year 602 CE (*T* 2147, 175c16–17), this would explain why it has not come down to us, in contrast to the other three translations by Faju: with the appearance of other copies of the text indicating Buddhahadra as the translator, it would have become evident that the translation had hitherto been falsely attributed. Consequently, the translation by Faju would from then on have been classified as lost. However, it is hardly possible that a scholar like Sengyou, who we know analyzed the style of works of undetermined translators mentioned in Daoan's catalogue, made such a mistaken attribution, involving the styles of two very distinct translation periods. Further, it is difficult to think of a reason why a translation of the *TGS* with no indication of its translator should be attributed to Faju rather than to Buddhahadra, who at that time was without doubt far more well known. (On the work of Sengyou regarding texts with undetermined translator, the accuracy of his catalogue, and also some of his mistakes, see Okabe 1973.) Alternatively, one could assume that the translation of Faju was later erroneously attributed to Buddhahadra or that Buddhahadra revised Faju's translation and published it under his own name, thus contributing to the "loss" of Faju's work. However, the choice of terminology in the translation attributed to Buddhahadra does not show any traces of "old" vocabulary belonging to the pre-Kumārajīva period, so that this assumption has little plausibility.

of the periods is particularly associated with Buddhahadra's most important translation, the *Avatamsakasūtra*, and we thus have no criterion for judging the authenticity of the two entries. It is not possible to specify the period of Buddhahadra's translation more precisely than within the period from 404 till 420.

Amoghavajra's translation of the *TGS* is first mentioned in the *Da tang zhen yuan xu kaiyuan shijiao lu* 大唐貞元續開元釋教錄 of the year 794 CE under the title *Da fangdeng rulai zang jing* 大方廣如來藏經.¹⁵⁰ The catalogues do not provide us with any information about the time and place of the translation. As neither catalogues nor the colophon¹⁵¹ of the translation itself sheds light on the date of Amoghavajra's achievement, we can only assume that it was in the period after 741, the year of the death of his teacher Vajrabodhi and his journey to Sri Lanka, which marks the beginning of Amoghavajra's steeply rising career as a translator and high-ranking priest. He died in 774.¹⁵²

4.3 Possible Motives of the Authors of the *TGS*

I have shown above how the idea of living beings endowed with the buddha-nature does not appear as a well-considered, completely consistent doctrine in the *TGS*. The exact nature of the inherent buddhahood of living beings remains hidden behind the vivid descriptions of the similes. Hence we may conclude that the *TGS* results less from careful *abhidharmic* considerations about the character of the buddha-nature than from the zeal of one or more persons motivated by other than doctrinal interests.¹⁵³ The decision to expose their message exclusively in easily understandable similes probably indicates that the targeted readership were non-specialists in the field of Buddhist *abhidharma*. Only the use of such colorful images made it possible to acquaint a broad audience with the abstract idea of buddhahood in all living beings. The emphasis lies on the message *that* all living beings have the buddha-nature rather than *how* this buddha-nature should be grasped in exact philosophical terms.

Of course, we cannot know whether the idea of a buddha-nature in living beings resulted from a novel meditative experience or because the authors felt the need to assert its existence in order to improve an unsatisfactory worldly or philosophical state of affairs, or whether it was based on other experiences. All this is mere speculation. Further, it would certainly be inappropriate to assume a model which reduces the range of possible motives to a single one. The first appearance of the *tathāgatagarbha* theory in India may well have been due to several different motivations, brought together by possibly more than a single author. It is thus natural to seek out several complementing motives as the ones that underlie the creation of the *TGS*.

¹⁵⁰ T 2156, 753c11 and 768b17.

¹⁵¹ The colophon consists nearly exclusively of the titles granted to Amoghavajra by officials. A translation of the colophon is included in the critical editions of part II. On the life of Amoghavajra, with references to the titles bestowed upon him, see Chou 1944/45: 284–307.

¹⁵² For all dates and events regarding Amoghavajra's life see Chou 1944/45.

¹⁵³ For a different opinion cp. Kariya 1979, esp. pp. 1136–1139. He considers the *TGS*, for reasons he does not reveal to us, a representative of “polished and intellectual, philosophical thought,” as consistent with the background of an “increase in monastic features.”

One of the authors' goals may have been to widen the circle of Mahāyāna followers by announcing that non-Mahāyāna Buddhists and even non-Buddhists were in possession of the buddha-nature. In this way, they could count on facilitating their conversion to Mahāyāna. The *ekayāna* doctrine, suggesting that there is no other means to final emancipation than Mahāyāna, had already been earlier expounded in the *Saddharmapuṇḍarīkasūtra*, a text which, as I have been trying to show, must have had a strong impact on the authors of the *TGS*.

Be that as it may, the doctrine put forward in the *TGS* would certainly encourage all segments of Buddhist society, and even non-Buddhists, to strive more earnestly for buddhahood, which, once reached, would result in their liberating activity on behalf of other living beings. If there is any concrete motive on the part of the authors which is formulated in the sūtra itself, it is precisely this encouragement, as it appears in the simile of the desperate woman with the universal emperor in her womb (8A–C). There we find the following call by the Tathāgata:

Sons of good family, apply energy without giving in to despondency! It will happen that one day the tathāgata [who has] entered [and] is present within you will become manifest. Then you will be designated 'bodhisattva' rather than '[ordinary] sentient being (*sattva*).' [And] again in the [next stage you] will be designated 'buddha,' rather than 'bodhisattva.'

In the *TGS* it is this message alone that directly urges the people to draw consequences from the fact that they possess the buddha-nature. The call is not very detailed, and we cannot know what exactly the authors had in mind when they put these words into the mouth of the Buddha. Nevertheless, besides the call in section 10 for the propagation of the *TGS* by various means (a standard feature in Mahāyāna sūtras), the passage suggests that energy (*vīrya*) was considered a central element to be employed. Obviously it was not the purpose of the authors to deal with the question of how to realize one's buddha-nature in detail.¹⁵⁴ Nor did they draw any ethical conclusions. This is surprising for the modern reader, since the *tathāgatagarbha* theory would seem to be an ideal ground for establishing an ethical system, namely one based on the principle that all living beings are equal by virtue of their buddha-nature. This absence of ethical implications indicates that the (early) buddha-nature theory centered on the importance of the individual's inclusion in the "family of the buddhas" rather than on a doctrinal basis for ethical behavior. Even in later texts of this strand, direct ethical implications continue to be rather seldom, in contrast to the prevailing worldly orientation of some of the sūtras propounding the *tathāgatagarbha* theory.¹⁵⁵

¹⁵⁴ Kariya characterizes the doctrine put forward by the *TGS* as a system void of any active participation of living beings in purifying themselves from their defilements (Kariya 1979: 1134ff.). Indeed, this can hardly be expected given the purpose of the sūtra stated above. The fact that no such activities are described extensively should therefore not be interpreted to mean that the *TGS* suggests or even calls for the sole lordship of the Tathāgata in this endeavor (see my discussion in section 3.3).

¹⁵⁵ Ethical implications in the texts propounding *tathāgatagarbha* thought are found, for example, in *RGV* I.157ff. which, on the basis of the buddha-nature doctrine, calls for the same respect for other living beings as for a teacher. In the *Āṅgulimāliyasūtra*, the doctrine of *tathāgatagarbha* is used to argue for a life of chastity and continence, against killing, and against the consumption of meat (see Seyfort Ruegg 1980: 236; *T* 120, vol. 2, 540a-541a). In the same article, Seyfort Ruegg supposes that *tathāgatagarbha* thought provided the decisive motive for the appearance of vegetarianism in Buddhism. The worldly orientation of some of the sūtras of the

As I have argued elsewhere (1999: 165–168), another possible driving force behind the creation of the *TGS* may have been the need to explain why all living beings can attain buddhahood—a central issue in Mahāyāna Buddhism, forcefully put forward in the *Saddharmapuṇḍarīkasūtra*. Chapter XIX of the *Saddharmapuṇḍarīkasūtra*, containing the story of the bodhisattva Sadāparibhūta, is of special interest in this context. According to the *Saddharmapuṇḍarīkasūtra*, this bodhisattva acquired his name from his habit of declaring to all monks, nuns and lay devotees that they were not despised (*aparibhūta*),¹⁵⁶ because in the future they would all attain buddhahood. For these sentiments, he had to endure harsh words and even bodily attacks from his interlocutors.¹⁵⁷ Apparently, he could not provide reasons for his assertion that buddhahood is accessible to all. The *TGS*, on the other hand, deals precisely with this question. Its main intention is to awake living beings to the fundamental truth that they all already contain buddhahood within themselves and thus, sooner or later, will all become fully awakened tathāgatas. Once this basic idea took hold as sound soteriology, there would be no reason anymore to attack Sadāparibhūta. From this perspective, the *TGS* can be understood as a text that subsequently provided a theory for the great assertion put forward in its popular predecessor, the *Saddharmapuṇḍarīkasūtra*, namely that all living beings will attain buddhahood. Thus while the *Saddharmapuṇḍarīkasūtra*, in a religious environment where it was probably not always heartily welcomed,¹⁵⁸ announced that all living beings would eventually attain buddhahood, the *TGS*, in a successive step, adopted as its task that of working out a justification for this assertion. That the *TGS* itself is introduced with impressive scenes of lotus flowers, and that the first simile has made use of this scenery to present the central message of the sūtra, can therefore hardly be a coincidence (the lotus figures in the title under which the *Saddharmapuṇḍarīkasūtra* became known).

4.4 The *TGS* in the History of Indian Buddhism

The analysis in section 4.2 has shown that there is not much reason to doubt that the first translation of the *TGS* was, as the Chinese catalogues have it, already executed around the end of the third century CE. I will now try to establish a second *terminus ante quem* for the composition of the *TGS* on the basis of its

buddha-nature teaching is best documented by the *Bodhisattva-gocaropāya-viṣaya-vikurvaṇa-nirdeśa-sūtra*, which contains a long chapter on royal ethics (see Zimmermann 2000).

¹⁵⁶ The name Sadāparibhūta, of course, can also be analyzed as *sadā-paribhūta* (“always despised”)—a possibility not dealt with in the *SP* (for the discussion of possible interpretations of the compound in the *SP* see Ueki 1998). The preacher of the “All will become buddhas”-doctrine in the *SP*, namely Sadāparibhūta, in the beginning despised by his fellows (*sadā-paribhūta*), would in the long run win appreciation (*sadā-aparibhūta*). The name of the bodhisattva is thus preprogrammed to adapt to a future when the idea of the buddhahood of all living beings would become a common tenet. (For similar ideas see the end of the *Bodhisattva-gocaropāya-viṣaya-vikurvaṇa-nirdeśa-sūtra* where it is stated that the sūtra will be found again after fifty years when people would follow Mahāyāna and pay proper reverence to the text. A summary of the sūtra is found in Zimmermann 2000: 180ff.) One final point: assuming that the name of the bodhisattva was not chosen incidentally, it is surprising that the question of the potential attainment of buddhahood was linked to such characterizations as “despised” and “non-despised.”

¹⁵⁷ For phraseological parallels between this chapter of the *SP* and the *TGS* see Zimmermann 1999: 159–161.

¹⁵⁸ See Tola and Dragonetti 1996/97.

relation to other texts. The focus of my analysis is the *Ratnagoṭravibhāga* (*vyākhyā*), in which all nine similes are found, albeit recomposed, along with quotations from the *TGS* in other passages. What can be said about the approximate date of origin of the *Ratnagoṭravibhāga*? Back in 1966 Takasaki showed that the *Ratnagoṭravibhāga* (*vyākhyā*) consists of at least two different layers. Schmithausen elaborated on Takasaki's theory in a review article and convincingly demonstrated that the recomposition of the similes in the *TGS* formed an essential part of the oldest stratum of the *Ratnagoṭravibhāga*.¹⁵⁹ This part consists of nine verse triplets (with the exception of I.108–111 where the set consists of four verses), each dedicated to one simile. The structure of each triplet is identical: two *triṣṭubh* or *jagatī* verses followed by one verse in the elaborate meter *śārdūlavikrīḍita*, which repeats the content of the two preceding verses. This structure was probably chosen with the esthetic expectations of an educated readership in mind. It is very rare in Indian Buddhist literature. There is, however, at least one notable parallel, in the chapter of a work whose content places it in close proximity to the *Ratnagoṭravibhāga*.

The text I am referring to is the ninth chapter of the *Mahāyānasūtrālamkāra*. This chapter deals with the issue of awakening and discusses, among other things, the omniscience and nonduality of buddhahood, the way it is manifested and its profundity (*gāmbhīrya*).¹⁶⁰ Now, if we look at the first six verses of the ninth chapter, we find a very similar metrical structure: verses 1 and 2 are in *anuṣṭubh* meter, while verse 3, recapitulating what is said in verses 1–2, is a *śārdūlavikrīḍita* verse. The same holds true for verses 4–5 and 6. We could argue that this is pure coincidence, but the chapter has also other affinities with the *Ratnagoṭravibhāga*. I am not arguing that chapter 9 of the *Mahāyānasūtrālamkāra* subscribes to the *tathāgatarbha* theory. Nevertheless, there are elements which suggest a close relation between and common background to the *Ratnagoṭravibhāga* and this chapter. For example, in verse 37 there is the formulation *tadgarbhāḥ sarvadehinaḥ* which, as the commentary makes clear, means that all living beings contain a *tathāgata* (*sarvasattvās*)¹⁶¹ *tathāgatarbha ity ucyate*. The formulation is a citation from the *TGS* (see 0M; 1A; 1B). In other verses, too, the idea of buddhahood already present within is prevalent. In verses 1–3 buddhahood is compared to a “casket of jewels” which only has to be opened; in the next verse triplet it is said to be a “mine of jewels.”

A much more profound analysis would be necessary in order to define the exact relation between the ninth chapter of the *Mahāyānasūtrālamkāra* and the ideas found in the *Ratnagoṭravibhāga*. This cannot be done here. What can be said, though, I think, is that the texts have a common background and that, in view of their unique metrical structure, are very likely to have been composed in the same or in a closely similar milieu. For the date of the *TGS* this means that the period of the *Mahāyānasūtrālamkāra*'s composition can serve as a *terminus ante quem*.

To establish a definite date for the composition of the *Mahāyānasūtrālamkāra* is impossible. Speaking in terms of historical development, it is generally assumed that Vasubandhu's *Trimśikā* represents a later stage of Yogācāra

¹⁵⁹ See Takasaki 1966: 10–19 and Schmithausen 1971: 123–130.

¹⁶⁰ A short overview of the contents of the ninth chapter is found in Griffiths 1990: 50f.

¹⁶¹ The text in the edition reads *sarve sattvās*. This has to be emended on the basis of the manuscripts now available.

philosophy than the *Mahāyānasūtrālamkāra*. In 1992 Schmithausen published an article about two close parallels in the *Trīṃśikā* and the *Laṅkāvatārasūtra*. If we accept his conclusion, the *Laṅkāvatārasūtra* utilized the *Trīṃśikā* as one of its sources. The citation of the *Trīṃśikā* in the *Laṅkāvatārasūtra* is already found in the Chinese translation of the latter by *Guṇabhadra*, which dates back to 443 CE. We therefore know that by that point the *Trīṃśikā* must already have been in existence for some time. The *Laṅkāvatārasūtra* was probably translated into Chinese not immediately after its completion, nor is it likely that the author of the *Laṅkāvatārasūtra* would have cited the *Trīṃśikā* by the then already well-known Vasubandhu as soon as it had appeared,¹⁶² presenting, as he has done, the citations as the words of the Buddha. If we consider these two chronological factors, it is very unlikely that the composition of the *Trīṃśikā* took place later than in the first two decades of the fifth century.

On the other hand, we may expect that a considerable period of time elapsed between the *Mahāyānasūtrālamkāra* and the *Trīṃśikā*—this in order to explain the maturing of Yogācāra ideas that took place in the interval. It is, of course, a difficult task to estimate the time necessary for such fundamental developments within philosophy. However, it may not be too speculative to suggest that some decades must lie between the *Mahāyānasūtrālamkāra* and the *Trīṃśikā*, and thus that the *Mahāyānasūtrālamkāra* could not easily have been composed after the ninth decennium of the fourth century. If we assume this period as the latest possible date, too, for the composition of the *Ratnagoṭravibhāga*, we arrive at approximately the middle of the fourth century as *terminus ante quem* for the *TGS* (more exactly: *TGS*₂).

In my calculation of the span of time between the various milestones, I have tended not to assume too long periods. Frauwallner, in his *Philosophie des Buddhismus*, suggests 250 CE for the date of the composition of the *Ratnagoṭravibhāga*,¹⁶³ and would consequently arrive at a much earlier date for the *TGS* than my *terminus ante quem* implies. In any case, the *terminus ante quem* of ca 350 CE established by my analysis and the information about the first translation of the *TGS* gained from the Chinese catalogues (ca 300 CE) do not lie far apart. The composition of the *TGS* in the second half of the third century is thus a fairly plausible assumption.

We do not have any sources of information about how sūtras came into existence in the third century AD and who the groups were that composed and propagated them. As proposed in section 4.3, the main motive for the creation of the *TGS* may have been the wish to encourage (potential) believers to engage in active Buddhist practice and to provide arguments why buddhahood is theoretically accessible to everyone—a position which was put forward in forceful terms in the *Saddharmapuṇḍarikasūtra*. The formulation of the *tathāgatagarbha* theory in the *TGS* is not the work of sophisticated philosophers. The whole sūtra, rather, seems to exude an air of pragmatism, with the efficacy of the buddha-nature being

¹⁶² See the biography of Vasubandhu (the author of the *AK*), which states that towards the end of his life he lived at the royal court “greatly honoured by all” (discussed in Frauwallner 1951: 25). The *Trīṃśikā*, it should be said, is believed to be one of his latest works (see Schmithausen 1992: 395).

¹⁶³ Frauwallner 1994: 255.

proclaimed again and again. In a previous article¹⁶⁴ I have tried to demonstrate how the *TGS* follows along the lines of the *Saddharmapuṇḍarikasūtra* which, even though the simile of the poor man with the jewel in his dress seems to call for it, shrinks from the assertion that living beings have an inherent potential for buddhahood, or even perfect buddhahood within. The story of the bodhisattva Sadāparibhūta shows that the time for such an assertion may not have been ripe yet—a conclusion supported by descriptions in the *Saddharmapuṇḍarikasūtra* of other harsh reactions towards its own propagators from the side of non-Mahāyāna followers. The *TGS*, in this point, was apparently not held back by any related considerations, zealously promulgating as it did the message of a universal buddhahood present in all living beings. A similar notion, that of *tathāgatajñāna* in all beings, had already been put forward in a simile in the **Tathāgatotpattisambhavanirdeśa*, and it seems that the authors of the *TGS* were aware of or even inspired by it when they composed their own illustrations.

The underlying idea of the realization of a buddhahood which is always present in living beings was one most fit to convey to a readership of non-specialists in the field of *abhidharma*, and, in fact, as the following tradition shows, was extremely successfully conveyed. The main task of the *TGS* was thus fulfilled. Both the work of systematizing and elaborating the teaching and the task of rendering it compatible with orthodox Buddhist teachings were left to later exegetes. The problems they had to confront are well documented in the commentary on the *Ratnagoṭravibhāga*, the *Ratnagoṭravibhāgavyākhyā*, where several interpretations, including the three ways of viewing the compound *tathāgatagarbha*, compete with each other without any final settlement. The authors of the *TGS* may not have been aware of the openings their teaching allowed for questioning basic Buddhist concepts. Even if they were aware of them, their decision to compose primarily for non-specialists seemingly overshadowed any possible reservations otherwise. This does not mean that they thought of their own teaching as a mere *upāya* without any ontological reality to it.

In the simile of the seed which turns into a fruit tree, the problematic aspect of the teaching is put into straightforward words: the result, namely the tree, is already perfectly contained in the seed. Seed and tree are of the same nature. The process of ripening is not the main consideration. The passage in question must have been provocative for Buddhist thinkers since it bears overtones of the so-called *satkāryavāda*, the idea, central to the Sāṅkhya system of philosophy and generally criticized by Buddhist philosophers, that there can be no production of something that does not exist before.¹⁶⁵ In the *Ratnagoṭravibhāga(vyākhyā)*, as I will show in section 4.5, the main emphasis in the simile then shifts to the fact that several factors are necessary for making the seed become a tree; the process of growth thereby takes on more importance. Nevertheless, the problematic formulation harbors a potential danger for the whole *tathāgatagarbha* theory: given the emphasis on the essential sameness of living beings and tathāgatas, the need to be purified from the accidental defilements (their presence being the only difference between living beings and buddhas) could easily be ignored. The notion that the effect is already contained in a perfect form in its cause, as opposed to being newly produced, could weaken the idea of “liberation,” and lead to the

¹⁶⁴ See Zimmermann 1999.

¹⁶⁵ For further examples of *satkāryavāda* in Indian philosophy, see Seyfort Ruegg 1989: 138f.

impression that serious religious practice is irrelevant.

From a philosophical point of view, there is one factor favoring the introduction of a theory of manifestation of buddhahood over one of pure causation. The authors of the *TGS*, who were acquainted with and impressed by the *Saddharmapuṇḍarīkasūtra*, knew of the central place the teaching of the eternity of the Buddha had in that text. In two of their own similes they stress in fact the indestructible and imperishable character of gold (simile 4) and seed (simile 6), and claim this to be the case for the true nature of living beings as well. In absorbing this idea of eternal buddhahood from the *Saddharmapuṇḍarīkasūtra*, the authors of the *TGS* may have seen no other choice than to claim that buddhahood as realized by living beings must always have been present in them, albeit in a state of non-efficacy. What is eternal cannot have a beginning, and thus the causal production of buddhahood would violate the theory of the eternity of the Buddha, and buddhahood in general. However, we cannot know to what extent such philosophical reflections were in fact of import for the authors of the *TGS*.

That the *TGS* is not an isolated case of a relatively early Mahāyāna work propagating a positive, enduring constituent in living beings is shown, for example, by the rewording of the verses of the *Gaganagañjasūtra* in the oldest stratum of the *Ratnagoṭravibhāga*.¹⁶⁶ There it is the mind's innate nature (*cittaprakṛti*) which is compared to "space," being described as "luminous," "without cause and condition," and "without origination and destruction."¹⁶⁷ Unlike the term *tathāgatagarbha*, the concept "the luminous mind defiled by adventitious defilements" appears already in the sūtras of the Hīnayāna schools and in other early texts of the Mahāyāna.¹⁶⁸ It was during this same time that the Vātsīputrīyas were active—a Buddhist school that believed in the existence of a "person" (*pudgala*) as a kind of continuous subject of rebirth and spiritual practice, and whose relation to the *skandhas* is stated to be indefinable.¹⁶⁹ The fact that Vasubandhu dedicated his *Pudgalapratīṣedhaprakaraṇa* mainly to the refutation of the theory of this school shows that the influence of its philosophy must have been felt far into the first millennium. Given this fact, the appearance and propagation of the *TGS* as a new, Mahāyānist formulation of the old belief in terms of a positive continuous subject, namely the person or the mind, does not altogether come as a surprise.¹⁷⁰

Throughout the whole *TGS* the term *śūnyatā* does not even appear once, nor does the general drift of the *TGS* somehow imply the notion of *śūnyatā* as its hidden foundation. On the contrary, the sūtra uses very positive and substantialist terms to describe the nature of living beings. In two verses in the oldest stratum of

¹⁶⁶ Cf. *RGV* I.55–62; see also Schmithausen 1971: 128f.

¹⁶⁷ In this study I cannot deal with the relation of the *TGS* to the *MPNS*, another fundamental work for the buddha-nature theory (for a detailed study see Shimoda 1997). The fact that the *MPNS* is not reflected in the oldest stratum of the *RGV* may mean that the parts dealing with the buddha-nature had not been composed by that time. The *MPNS* cites the *TGS*, the key term in the buddha-nature theory it propounds being *buddhadhātu*. The theory in the *MPNS* may have been inspired by the *TGS*, but it developed from a different perspective, one of a veneration of relics (*dhātu*). For the key concept "luminous mind" see Seyfort Rugg 1969: 411ff.

¹⁶⁸ E.g. the *Daśabhūmika* or the *Samādhirāja*; see Seyfort Rugg 1969: 411ff.

¹⁶⁹ See Cousins 1994 (particularly n. 6 for further references to the Vātsīputrīyas).

¹⁷⁰ See also the study on the various concepts of *vijñāna* in the Pāli Canon in Langer 2001. Among the "Nebeneinander verschiedener Positionen im Kanon" (p. 70), *vijñāna* functions at times as the "überlebendes Prinzip," taking its place in the womb of living beings and leaving them at the time of their death (pp. 1–8; 69).

the *Ratnagoṭravibhāga* (I.156–157) that mention the purpose of its instruction, we do find an explicit reference to *śūnyatā*.¹⁷¹ Why has the *buddhadhātu*, it is asked there, been taught as existing in all living beings, given that all phenomena were previously said to be empty (*śūnya*)? The following verse then mentions five deficiencies which cannot be sufficiently remedied (or are even reenforced?) by the latter notion, namely depression (*līnaṃ cittaṃ*), contempt towards inferior living beings (*hīnasattveṣv avajñā*), clinging to the unreal (*abhūtagrāha*), denial of real phenomena (*bhūtadharmāpavāda*) and excessive self-love (*ātmasneho 'dhikah*). The question whether or not the propagation of the concept of *tathāgatagarbha* by the *TGS* may also be grounded in such reasoning must remain open. That the *Ratnagoṭravibhāga*(*vyākhyā*) understands itself to be the final and ultimate teaching of Mahāyāna is documented by its subtitle, *Mahāyānottara-tantraśāstra*. Its intention, therefore, is to limit the validity of the corpus of Buddhist teachings that propagate *śūnyatā* thought to the realm of the accidental, world-constituting and unreal, and in so doing to complement this corpus. In this way the authors of the *Ratnagoṭravibhāga*(*vyākhyā*) hoped to introduce their readership to a perfect understanding of the truth, and in the process, of course, avoid the deficiencies quoted above with which the former teachings were associated.¹⁷²

Some last few words remain to be said about the qualification of the *TGS* and later texts expounding *tathāgatagarbha* thought as non-Buddhist. This criticism has been heard since the end of the 1980s mainly from two eminent Japanese scholars who created the name “Critical Buddhism” (Hihan Bukkyō 批判仏教) for their school of thought.¹⁷³ Their main argument is that the *tathāgatagarbha* teaching is not in line with the two factors which they consider to be the two basic constituents of Buddhism: the teaching of non-self (*anātman*) and the teaching of dependent origination (*pratītyasamutpāda*). The law of dependent origination ought not to allow for the idea of an eternal self or an underlying basis or locus on which all phenomena depend. Their criticism of the *TGS* is partly valid: the existence of an eternal, imperishable self, that is, buddhahood, is definitely the basic point of the *TGS*, but the sūtra does not express any philosophical view concerning the structure of the world. The task of drawing a conclusive picture of the relation between buddhahood and the world of phenomena was left to succeeding texts, such as the *Śrīmālādevīsīmhanādasūtra*¹⁷⁴ and the *Ratnagoṭravibhāga*(*vyākhyā*). For some basic questions, unequivocal

¹⁷¹ See Schmithausen 1973a: 134; for a different analysis of the passage see Seyfort Rugg 1973: 317, 345.

¹⁷² The open claim that the teaching of *tathāgatagarbha* can serve as a therapy for the five problems mentioned above should not lead one to assume that the authors did not think of their teaching as revealing ultimate truth. The Buddhist teachings have always been seen as having a “therapeutic aspect” (on the discussion of the historical relation between the Four Noble Truths and the four systematic parts in the science of medicine and the association of the Buddhist teaching with medical philosophy by the tradition itself, see Wezler 1984: 312–324). If the *tathāgatagarbha* theory is understood to be an *upāya* without any absolute truth, then so too can all other Buddhist doctrines. However, I doubt that this is how the Buddhist tradition perceived itself.

¹⁷³ See the articles and bibliography in Hubbard and Swanson 1997 for a well-nuanced treatment of what the discussion is about.

¹⁷⁴ Regarding the *ŚMS*, Richard King has demonstrated how the sūtra failed to take a definite standpoint on several philosophical questions of fundamental importance and so left them unanswered (see King 1995).

answers were never given. A comprehensive dogmatic set of “classical” *tathāgatagarbha* positions never did evolve in India. The reason for this arguably lay with the authors of the *TGS* themselves who, as stated above, were first and foremost interested in underpinning the Mahāyānist assertion that all living beings can attain buddhahood. If they were aware of the wider doctrinal implications of their idea at all, they surely underestimated the difficulties that their assertions later presented for the establishment of a plausible philosophical framework. Pragmatically motivated, they accorded priority to getting their inspiring and positive message across over any such well-thought-out soteriology and metaphysics. But is there any reason why this philosophically naive birth of the *tathāgatagarbha* teaching and its heritage should be labeled non-Buddhist?

There can be no doubt that the authors of the *TGS* and those of following works were deeply rooted in a Buddhist religious environment. We can be sure that they thought of themselves as Buddhists, were inspired by Buddhist scriptures, and acted as Buddhists. One point should be made clear: if nowadays critics deny that the *tathāgatagarbha* teaching is a part of Buddhism, it is because their attitude towards religion is mainly influenced by textual and doctrinal considerations. They have a clear-cut definition of what Buddhist philosophy is or should be about. To my mind, Buddhism is a phenomenon which cannot be satisfactorily described in terms of doctrines alone. To identify Buddhism solely with doctrines would mean to exclude from it many other equally important aspects such as Buddhist piety and religious practice, ritualism, ethics, art, archeology and rules of statesmanship.

Further, the criteria which serve as critics’ measures for the inclusion of any particular philosophical doctrine in Buddhism are, of course, typical ideas within Buddhism. But can they really be generalized and said to be constitutive for all Buddhist doctrines? To my knowledge, no voices were raised in the tradition of Indian Buddhism that the *tathāgatagarbha* teaching is not Buddhist.¹⁷⁵ And obviously, the criteria established by the critics were not wholly decisive for the philosophical climate of those early days. The *Mahāparinirvāṇasūtra* and the *Laṅkāvatārasūtra* characterize the *tathāgatagarbha* explicitly as *ātman*.¹⁷⁶ As I have argued above, the *TGS* seems to continue a tradition in Indian Buddhism which was based on a positive use of the concept of “person” and was not committed to a one-sided denial of a self.¹⁷⁷ From early times on, it seems, this positive strand co-existed with the majority of schools which categorically rejected the existence of a self. The criteria put forward by the proponents of Critical Buddhism are, to my mind, chosen arbitrarily, and cannot claim validity for all branches of the Buddhist tradition. In view of the fact, too, that we are still far from agreeing on the interpretation of what the founder of the religion himself had to say about the question of the self (we cannot even be sure what he said!), the critics cannot claim that their views represent the opinion of the historical Buddha.

¹⁷⁵ In the *LAS* the wish for clarification regarding the differences between “the doctrine of *tathāgatagarbha* and the doctrine of Self of the non-Buddhist teachers” is, however, expressed by Mahāmāti towards the Buddha (*LAS* 78.1–4).

¹⁷⁶ Cf. the *Mahāparinirvāṇasūtra* in the translation of *Dharmakṣema (*Tanwuchen* 曇無讖): *T* 374, vol. 12, 407b9; *LAS* X.746 and X.760. The *ŚMS* identifies the *dharmakāya* with the *ātmapāramitā* (Tibetan: *Q* 760-48, vol. 24, *dKon brtsegs*, 'I 257b1–285a7: 280a8f.).

¹⁷⁷ For balanced descriptions of positive and negative approaches to a self in the history of Indian Buddhism see Schmithausen 1969b and 1973b: 177f.; also Seyfort Ruegg 1989: chapter I, esp. 43f.; Bronkhorst 2000: 41–62, 91–94.

The philosophical positions they hold to be tenable are thus not an appropriate line of approach—not even in consideration of the fact that they are dealing only with the limited domain of doctrinal teaching within the multifaceted phenomenon called Buddhism.

4.5 The *TGS* in the *Ratnagoṭravibhāga(vyākhyā)* and Other Indian Texts

The *TGS* can be said to have been of utmost importance for the *tathāgatagarbha* theory, inasmuch as it coined its basic vocabulary and illustrated by use of vivid imagery the fundamental relation between the buddha-nature in living beings and the *kleśas*. However, the richness and variety contained in the similes—which I have tried to describe above—tended to fade in later references to and rearrangements of the *sūtra*. The main focus came to be the contrast between the pure essence on the one hand and the unpleasant material in which it is hidden on the other. The text in the Indian tradition which devotes most attention to the *TGS* is undoubtedly the *Ratnagoṭravibhāga(vyākhyā)*, the most influential *śāstra* within the corpus of *tathāgatagarbha* works in India. It is thus necessary to deal briefly with the question how the *Ratnagoṭravibhāga(vyākhyā)* treats the similes of the *TGS* (the only part of its contents extensively taken up by the *Ratnagoṭravibhāga(vyākhyā)*). However, before doing so, we need to address some other passages which seem to derive from the *TGS*.

In *TGS* 7B, it is stressed that the body of a *tathāgata* is present even in animals (... *tha na dud 'gro'i skye gnas su song ba rnam kyang rung ste /*). A very similar formulation is found in *Ratnagoṭravibhāgavyākhyā* 15.11f.: ... *antaśas tiryagyonigateṣv api*.... The passage could well be based on the *TGS*.

Ratnagoṭravibhāgavyākhyā 72.11–12 is a word-for-word quotation from the *TGS* (8B.3–4), where it is stated that the *tathāgatadhātu* is existent in every living being without their being aware of it. This sentence and its citation in the *Ratnagoṭravibhāgavyākhyā* are discussed in section 3.1 and in the note on my translation. The passage deserves our particular attention in view of the fact that the *Ratnagoṭravibhāgavyākhyā* takes the term *garbhagata* in the sense of “in the state of an embryo.” I have argued above that within the *TGS* the term *garbhagata* means rather the location of the *dhātu* of living beings: “in the womb” or “within (living beings).”¹⁷⁸ An understanding of the passage in this sense is also attested for the parallel verses in the *Ratnagoṭravibhāga* in which the content of the *TGS* similes is rendered freely. The phraseology is a “king found within the womb” (I.123: *garbhāntarasthe nṛpe*) and “good protectors within [living beings] themselves” (I.123: *sannātheṣu ca satsu ... svātmāntarastheṣv api*). Obviously, as to this point, the *TGS* has been interpreted differently in the two citations within the *Ratnagoṭravibhāga(vyākhyā)*: verse I.123 displays an understanding in line with the original meaning in the *TGS*, whereas the prose passage 72.11–12 emphasizes the embryonic aspect of living beings’ buddha-nature. This aspect, as shown above, is inherent to the term *tathāgatagarbha*. It seems, however, that the authors of the *TGS*, having embraced a theory of manifestation, did not stress this factor in any deliberate fashion. Only later exegetes like those responsible for the

¹⁷⁸ See pp. 56ff.

prose section *Ratnagoṭravibhāgavyākhyā* 72.11–12 would have made use of the entire range of possible interpretations of the key term *tathāgatagarbha* in order to reveal all its connotations. We can take the fact that the *TGS* verses in the *Ratnagoṭravibhāga* exhibit a different understanding to be another indication that the author(s) of the prose and the rewriter of the *TGS* verses in the *Ratnagoṭravibhāga(vyākhyā)* were not the same.

The second word-for-word citation of the *TGS* is found in *Ratnagoṭravibhāgavyākhyā* 73.11–12. It contains the formulation of the essential law (*dharmatā*) that all living beings always contain a *tathāgata* (*TGS* 1B). The position of the passage in the *Ratnagoṭravibhāgavyākhyā* at the beginning of a section where the characteristics of the *tathāgatagarbha* are discussed demonstrates that the author(s) of the *Ratnagoṭravibhāgavyākhyā* thought of it as one of the most fundamental expressions of the *tathāgatagarbha* theory. The passage in the *TGS* summarizes the descriptions of the section before and was designed to function as a finalizing authoritative statement of general validity. It was understood and commented upon as such by the authors of the *Ratnagoṭravibhāgavyākhyā*.

There are three other passages in the *Ratnagoṭravibhāgavyākhyā* where formulations of the *TGS* seem to have been taken over. They all focus on the relation of sentient beings to their buddha-nature: *sarvasattvās tathāgatagarbhāḥ* (*RGVV* 25.18; 68.13) and *sadā sarvasattvās tathāgatagarbhāḥ* (*RGVV* 26.7). Similar wording is found in *TGS* 0M.19f., 1A.8f. and, as just seen, in 1B.2f. That *RGVV* 25.18 and 26.7 are inspired by the *TGS* is clearly demonstrated by the fact that only a few lines below, in 26.9f., it is stated that the three meanings of the formulation *sadā sarvasattvās tathāgatagarbhāḥ* will be explained according to the *TGS* (*tathāgatagarbhasūtrānusāreṇa*).

We shall now turn to the section in the *Ratnagoṭravibhāga(vyākhyā)* which deals with the nine similes of the *TGS*. It comprises pp. 59–72 (verses I.95–152). The content of the section is the following:

- (1) A summary and detailed exposition of the nine similes of the *TGS* (59.8–67.2; verses I.95–129)
- (2) The characteristics and a concordance of the defilements of the mind (*cittasamkleśa*) mentioned in the nine similes (67.2–69.16; verses I.130–143)
- (3) The characteristics and a concordance of the threefold nature of living beings' buddha-nature mentioned in the nine similes (69.17–72.14; verses I. 144–152)

As is well known, the *Ratnagoṭravibhāga(vyākhyā)* itself has a complex textual history and consists of at least two different layers: first, a primary collection of verses for the most part congruent with the verses of the Chinese translation of the *Ratnagoṭravibhāga* found immediately before the complete Chinese translation; secondly, one or perhaps two commentarial layers consisting of verses and prose sections which must have been added at a later stage.¹⁷⁹ Of the sections (1) to (3), only the verses I.96–126 are part of the primary layer of the *Ratnagoṭravibhāga*. Verses I.95, I.127–152 and the prose belong to the commentarial level.

The section I.96–126 is made up of three summarizing verses (I.96–98) in which the *upamāna* elements corresponding to the *kleśas* and to the buddha-

¹⁷⁹ On the textual history of the *RGV(V)* see Takasaki 1966: 10–19 and Schmithausen 1971: 123–130; for a different result cp. Seyfort Ruegg 1976.

essence of the nine similes are enumerated, and of nine verse triplets (with the exception of I.108–111 where the set consists of four verses), each dedicated to one simile.¹⁸⁰ The structure of each triplet is identical. They all start with two *triṣṭubh* verses¹⁸¹ and end with a verse in the elaborate *śārdūlavikrīḍita* meter. The first verse of each triplet describes the *upamāna*, the second refers to the *upameya*, and the third and last verse repeats, in different words, the content of the two preceding verses. The verses I.96–126 thus retell all nine similes of the *TGS* in their own fashion. This free reproduction of the main part of the *TGS* is the longest citation of the *TGS* in Indian scriptures. Later works citing the similes of the *TGS* may have based themselves on this reproduction found in the *Ratnagoṭravibhāga* rather than directly extracting them from the *TGS*.

As I have shown in section 1.1, the reproduction of the similes in the *Ratnagoṭravibhāga* is based on recension *TGS*₂. For my translation of *Tib*, the verses in the *Ratnagoṭravibhāga* functioned as an important guide to understanding certain passages which are unclear or ambiguous in the Tibetan translation. Though the content of the verses in the *Ratnagoṭravibhāga* diverges in some cases quite significantly from *TGS*₂, we find many passages where the later writer employed similar grammatical structures and syntactic patterns to those of *TGS*₂, made use of its vocabulary, and faithfully transmitted its basic ideas. There is no indication that the verses in the *TGS* were composed in various meters (as there is in the *Ratnagoṭravibhāga*)—such things as different numbers of syllables in *Bth* or different numbers of characters in the Chinese translations. It is possible that the author of the *Ratnagoṭravibhāga* recomposed the section of the *TGS*, instead of citing it word for word owing to metrical considerations. We do not know the reason for the very rare metrical structure within the verse triplets of the *Ratnagoṭravibhāga*. This structure, requiring the use of a particular meter, may have forced the author to recompose the whole section. In any case, he did not slavishly follow the text of the *TGS*. He freely substitutes one word for another, introduces new formulations and features, emphasizes elements which in the *TGS* seem to belong to the background and, in general, illustrates the similes in a more refined and poetic way. The direct speech of the Buddha, including his questions and encouragement, which frequently interrupt his account of the similes in *TGS*₂, do not appear in the *Ratnagoṭravibhāga* verses. It is nevertheless clear that the author had an echo of the wording of the *TGS* in mind when composing the verses. This is documented by a number of passages in both texts which are in close accordance.¹⁸²

The term *tathāgatagarbha* does not appear once in the reproduction. Instead we find the *bahuvrīhi* compound *sambuddhagarbha*, relating to *jagat* (I.101), and the term *garbha*, in the meaning of “embryo” and “womb,” in the verses describing the poor woman in the poorhouse (I.121–123). In contrast to the *TGS*, the term (*dharmā-*)*dhātu* is frequently used (I.103; 116; 122) in order to designate the buddha-nature of living beings. And whereas in general the concerned verses in the *Ratnagoṭravibhāga* are firmly based on the idea of a manifestation of an already perfect buddha-essence within living beings, the simile of the sprout in the seed has been adapted to Buddhist *abhidharmic* considerations.

¹⁸⁰ Here I recapitulate what was written in the first paragraphs of section 4.4.

¹⁸¹ Only the verses I.99 and I.100 rendering the lotus simile are in *jagatī* meter.

¹⁸² I have noted similarities between the verses in the *RGV* and the *TGS* in the notes to my translation. A good example is found and discussed at the end of 4A.

The simile in the *TGS* stresses the identity of nature of the seed and the fully grown tree. The statement that the result is already perfectly contained in the seed in fact amounts to *satkāryavāda*, a theory normally attacked by Buddhist philosophers as leading to eternalism. This could be the reason why the author of the verses in the *Ratnagoṭravibhāga* emphasized other aspects of the simile, namely the growth of the sprout itself, its gradual development (*kramāt; krameṇa*)¹⁸³ and the need for the presence of factors (*pratyaya*) enabling the sprout's growth, such as “water, sunlight, air, soil, time and space” (I.115–117). The perfect buddha (*sambuddha*) is even compared to a sprout in the state of being a seed (*bijāṅkura*) (I.117). With this new formulation the simile was propelled in the direction of the classical Buddhist doctrine of *pratīyasamutpāda*. The possible reproach of maintaining a position of eternalism—based on the explicit wording in the *TGS*—could thereby be forestalled, though the implications arising from this doctrine of a revelation of the buddha-nature would still be open to the same kind of criticism. However, we can say that the rewriters of the verses paid more attention to *abhidharmic* needs than their predecessors, who formulated their message in a philosophically less vigorous way.

The similes of the *TGS* figure also in the commentary of the *Ratnagoṭravibhāga*, the *Ratnagoṭravibhāgavyākhyā*. Verses I.95, I.127–152 and some passages in prose in (1)–(3) reflect this point. An intent to systematize seems to have been prevalent in this section of the commentary. It is obvious that this systematization is forced on the similes, both in the classification of nine kinds of *kleśas* (matching the nine similes) under four groups corresponding to four kinds of living beings (67.2–69.15) and in the threefold classification of the buddha-element (*dhātu*) in relation to the nine similes (69.16–72.14). Regarding this latter grouping of the similes according to the three concepts *dharmakāya*, *tathatā* and *gotra*, terms used in verse I.27¹⁸⁴ to explain the phrase *sarvasattvās tathāgatagarbhāḥ* of the *TGS*, at least the similes of the sprout turning into a tree and the *cakravartin* embryo in the womb of the ugly woman seem to be appropriate to the chosen category. Together with three other similes, they are subsumed under the concept *gotra* which, in the *Ratnagoṭravibhāga*, is understood as the cause (*hetu*) of buddhahood. This concept is inherent in the *upamāna* of the seed/sprout and the embryonic ruler, entities which still have to undergo a process of further ripening in order to arrive at perfection. But whereas the inclusion of the eighth simile (the embryonic ruler) in the *gotra* category may have occurred without great reflection,¹⁸⁵ the same classification of the simile of the seed which turns into a tree was probably well thought out. I have noted above that the authors of the *Ratnagoṭravibhāgavyākhyā* emphasize the connotations of development in this simile. The same tendency has already been observed in the commentator's explication of the phrase *garbhagata* in the section on *gotra* in 72.11f.—a citation from the same simile in the *TGS* (see above). The term *garbha* in this compound was not intended in the *TGS* to mean “embryo” but “womb” or “inside,” the accepted sense for the recomposed verses

¹⁸³ The commentary verse I.139, where the simile is recalled in a reduced form, also emphasizes the gradual growing of the sprout (*-kramodayāt*).

¹⁸⁴ Verse I.27 is, be it noted, part of the oldest layer. The threefold classification itself must therefore be an old element.

¹⁸⁵ The authors of the *RGV(V)* make no mention that the embryo still must grow. *Gotra* as the last of the three terms covers the last similes, of which the *cakravartin* embryo simile is one.

of the old layer in the *Ratnagoṭravibhāga*. Nevertheless, the commentators of the *Ratnagoṭravibhāga* cited it in order to document that the term *dhātu* can be used in the sense of *hetu*.

The threefold characterization of the *buddhadhātu* can hardly have played any role in the composition and arrangement of the similes in the *TGS*. Verse I.27, part of the oldest layer of the *Ratnagoṭravibhāga*, demonstrates that the threefold classification was already in use at the time the different blocks of text from which the *Ratnagoṭravibhāga* was formed¹⁸⁶ were merged together. The idea of illustrating these three categories by way of the nine similes, however, is probably that of the later commentator(s).

The *abhidharma*-oriented interest in the similes displayed by the composer(s) of the *vyākhyā* led them to focus primarily on isolated elements in the *upamānas* corresponding to the *kleśas* and the buddha-essence.¹⁸⁷ As a consequence, in the commentary the similes are portrayed as lifeless and as lacking their main points of emphasis; the rich connotations of the *tertium comparationis* are reduced to a simple enumeration of corresponding elements.

The *Ratnagoṭravibhāga*(*vyākhyā*) contains the only known word-for-word citations of the *TGS* among Indian texts and can without doubt be viewed as a work which dealt with the *TGS* with a maximum of care. The similes in the *TGS* and their paraphrases in the *Ratnagoṭravibhāga* largely agree with one another. Thus we cannot decide whether passages in other texts which draw on one or more of the nine similes had the *TGS* itself or the *Ratnagoṭravibhāga* as their source. A short recounting of all nine similes is found in the *Foxing lun* 佛性論,¹⁸⁸ a philosophical treatise closely mirroring the structure of the *Ratnagoṭravibhāga*(*vyākhyā*). According to tradition, the author of the text was Vasubandhu. It was translated into Chinese by Paramārtha, who is now believed to be the true author of the text.¹⁸⁹ The wording of the similes in the 佛性論 does not allow a final determination on whether the author utilized the *TGS* (*TGS*₁ or *TGS*₂) directly or based himself on the similes quoted in the *Ratnagoṭravibhāga* (*TGS*₂). (He could, of course, have been acquainted with both the recensions and the similes in the *Ratnagoṭravibhāga*.)

Other texts sporadically refer directly to the *TGS* or use analogies or similes which could have been influenced by the *TGS*. In the following I will cite several such passages without, however, striving for completeness.

The *Mahāparinirvāṇasūtra* explicitly refers to the *TGS* in one passage, and attributes the statement that the *buddhadhātu* is present in all living beings to it.¹⁹⁰ There is no word-for-word correspondence with the *TGS*. However, the passage

¹⁸⁶ The *RGV* is composed of several blocks, of which the similes of the *TGS* make up one. See Schmithausen 1971: 128ff.

¹⁸⁷ This is particularly evident in the case of the eighth simile: the commentary verse I.141 compares the impurities to the “coverings of the embryo/in the form of a womb” (*garbhakośa*-). In neither of the two descriptions in the *TGS* and the *RGV* is a comparison between the embryonic coverings and the defilements drawn.

¹⁸⁸ *T* 1610, vol. 31; the similes are found in 807c9–808a13.

¹⁸⁹ For a discussion of this issue see e.g. Takemura 1977: 6f.

¹⁹⁰ *gZhan yang 'di na dge slong la la de bzhiñ gshogs pa'i snying po'i mdo sde chen po ston par byed do*¹ // *sems can thams cad la ni sangs rgyas kyi khams yod la*² *khams de rang rang gi lus la 'chang*³ *ste l...* [¹ *S: de*; ² *S: la l*; ³ *Q: tshang*] (*MPNS Q* 99a6; *S* 175a4f.; quotations of the Chinese in Takasaki 1974: 137.) As mentioned above on p. 76, the passage in the commentary to verse IX.37 of the *Mahāyānasūtrālamkāra* (reading *sarvasattvās tathāgatagarbhā ity ucyate*) could also derive from the *TGS* (0M, 1A or 1B).

could be a free rendering of 8B.3–4, the only one in the *TGS* containing the term *dhātu*.¹⁹¹ The fact that the *TGS* was known to the authors of the *Mahāparinirvāṇa-sūtra* also gives rise to the assumption that the simile of the hidden treasure in the *Mahāparinirvāṇasūtra*,¹⁹² though different in details, may have been inspired by the corresponding simile of the *TGS*.

In another well-known work, the *Laṅkāvatārasūtra*, we find a passage¹⁹³ that refers to “the text of the sūtras” where the *tathāgatagarbha* is said to be described as “luminous by nature, bearing the thirty-two marks [of a Great Being], being inside the bodies of all sentient beings, ... like a gem of great value and price that is enwrapped in a dirty garment...” Though the meaning attributed to the compound *tathāgatagarbha* is not in line with the *TGS*, the concrete depiction of the *tathāgatas* inside living beings as found in the first simile of the *TGS*,¹⁹⁴ and the allusion to the simile of the buddha statue wrapped in rotten rags, leave little doubt that the *Laṅkāvatārasūtra* is here referring to the *TGS*.

In the *Dacheng fajie wu chabie lun* 大乘法界無差別論 which is based on the 佛性論, the veiling *kleśas* are compared to “not yet opened lotuses” and “filth” in which gold is found.¹⁹⁵ The comparisons, though of a general nature, remind one strongly of the *TGS*.

The **Bodhisattva-gocaropāya-viśaya-vikurvaṇa-nirdeśa-sūtra* describes the relation between the *tathāgatagarbha* and the defilements in terms of ten likenesses, among them “a sprout in a seed,” “a jewel in a treasure,” “a statue in its mold,” and “an embryo in the womb.”¹⁹⁶ Here again all four comparisons are undoubtedly inspired by the *TGS*.

Even more indebted to the *TGS* is a series of similes in the *Mahāmegha-sūtra*.¹⁹⁷ Two of these similes closely resemble the illustrations in the *TGS*. The similes compare the state of not living according to the teachings and of not entering into a certain *samādhi* to (1) winter rice etc. which have not yet fulfilled their nature of benefiting living beings and (2) the fruit of a palmyra palm, a mango tree, cane etc. which has not yet become a tree. The similes are here used to illustrate that one can talk of such fulfillment in something or somebody only if certain necessary processes leading to the unfoldment of that nature have occurred. Though the aim of the author of the similes in this sūtra is different from that of the *TGS*, the illustrations clearly echo basic elements of the latter. In view of the occurrence of a “fruit of a palmyra palm, a mango tree and cane,” we can be sure that the author based himself on recension *TGS*₂, for only there do we find these plants.¹⁹⁸

¹⁹¹ For further details see note 204 in my translation.

¹⁹² *MPNS S* 184b1ff.; *Q* 105b6ff.; see Takasaki 1974: 144f. for the Chinese.

¹⁹³ *LAS* 77.13–78.1; see note 84 above.

¹⁹⁴ In *Ch*₂ (OG) we find a very similar passage that mentions the thirty-two marks; see note 84 above for details.

¹⁹⁵ *T* 1626, vol. 31; for the comparisons see 893b23ff.

¹⁹⁶ *T* 272, vol. 9; see 359b2f.; there is no correspondence in the Tibetan text.

¹⁹⁷ *T* 387, vol. 12; (*Dacheng deng wuxiang jing* 大乘等無想經): 1104b13ff.; Tibetan: *Q* 898, vol. 35, *mDo sna tshogs*, *Dzu* 121a4–237a6 (*Phags pa sprin chen po shes bya ba theg pa chen po 'i mdo*): 219b7ff.; see also Takasaki 1974: 290f.

¹⁹⁸ Recension *TGS*₁ has only “a mango tree.” The rewording in the *RGV* speaks of “fruits of the palmyra palm and mangos” (*RGV* I.116, 117).

Two other sūtras mention the *TGS*: The Mahāyānist *Āṅgulimāliyasūtra*,¹⁹⁹ in asserting that all living beings have the *tathāgatagarbha*, draws attention to the significance of the *TGS* and the need to appreciate it properly. The *Da fa gu jing* 大法鼓經 (**Mahābherihārakasūtra*) states that it is only the bodhisattva-*mahāsattvas* who understand the eternal character of the Tathāgata and that, among other positive activities, they preserve the *TGS*.²⁰⁰ Finally, in the *Adhyardhaśatikā Prajñāpāramitā* the phrase *sarvasattvās tathāgatagarbhāḥ* appears without the mention of a source.²⁰¹

From these references to the *TGS*, the great importance of this sūtra for the genesis and development of the *tathāgatagarbha* strand of Buddhist thought becomes clear. The *Ratnagotravibhāga(vyākhyā)*, the main representative of the Indian *tathāgatagarbha* theory, contains a large section dedicated to the illustrations found in the *TGS*. The *TGS* thus affected the philosophical formulation of the key concept of this theory in a decisive way. Its title became synonymous with the basic doctrine that all living beings have the buddha-nature; its similes, as shown above, remained powerfully alive and were utilized, with certain modifications, not only to describe the relation between the buddha-essence and the sheaths of defilements but also to illustrate other relevant aspects of the *tathāgatagarbha* theory.

4.6 The Twentieth-Century Reception of the *TGS*

The modern history of scholarly works dealing with the *TGS* has been dominated by Japanese Buddhologists. In 1933 Tokiwa Daijō published a Japanese translation in the *kundoku* 訓読 style of the recension of Buddhābhadrā in the *Kokuyaku Issaikyō*. Probably inspired by the publication of the Sanskrit text of the *Ratnagotravibhāga(vyākhyā)* in 1950 by Edward H. Johnston, which revealed the huge meaning the *TGS* had for the development of the *tathāgatagarbha* theory, Tōdō Kyōshun in 1959 collated the Tibetan texts found in the Kanjurs from Derge, Narthang and Peking.²⁰² Facing the Tibetan text, he arranged the two Chinese translations so as to make a close comparison of the versions possible. In an introduction, he dealt with the contents of the sūtra, the doctrinal environment from which the *TGS* had presumably evolved, and entries in Chinese catalogues regarding Chinese translations of the *TGS* which are reported to be lost.

The first translation from the Tibetan (Derge) was accomplished by Kagawa Takao in 1962. Many useful hints on related passages in other Mahāyāna texts are found in his annotations. In 1974, Takasaki Jikidō's monumental work on the formation of the *tathāgatagarbha* theory appeared.²⁰³ Thirty-two pages are

¹⁹⁹ *T* 120, vol. 2 (*Yangjuemoluo jing* 央掘魔羅經): 539c15; Tibetan: *Q* 879, vol. 34, *mDo sna tshogs*, *Tsu* 133b2–215a1 ('*Phags pa sor mo'i phreng ba la phan pa shes bya ba theg pa chen po'i mdo*): 201b4.

²⁰⁰ *T* 270, vol. 9: 295a6; see also Takasaki 1974: 235.

²⁰¹ See the reprinted text of the "Toganō Edition" of the *Ardhyardhaśatikā Prajñāpāramitā* in Yukio Hatta (ed.), *Index to the Ārya-prajñā-pāramitā-naya-śatapañcaśatikā*, Kyoto: Heirakuji, 1971, p. 6.18 (198.18).

²⁰² The apparatus, however, is not always correct, and in some passages is ambiguous.

²⁰³ Seven years before, in 1966, Takasaki had published an English translation of the *RGV(V)*, which contains the reproduction of the nine similes of the *TGS* in the *RGV*.

dedicated exclusively to the *TGS*, of which he translated several passages, characterizing it as one of the three basic receptacles of *tathāgatagarbha* thought. He dealt extensively with the earliest stage of the buddha-nature theory as contained in the *TGS*, and concluded that the compound *tathāgatagarbha* in the sūtra must be understood as a *bahuvrīhi*. Eight years later, in 1981, Takasaki translated the whole *TGS* from the Tibetan version (Peking) into modern Japanese as part of the Daijō Butten series. His work also contains relevant observations concerning the textual history of the Tibetan version and the Chinese translation by Buddhahadra, along with detailed annotations on the translated text. The translation deserves deep respect for having introduced the sūtra to a broad Japanese public while still maintaining philologically high standards.

In the West, David Seyfort Ruegg's study and translation of the *De bzhin gshegs pa'i snying po gsal zhing mdzes par byed pa'i rgyan* by Bu ston made some parts of the original Tibetan text of the *TGS* known to the Western reader in French.²⁰⁴ His rendering is based on the citations of the *TGS* by Bu ston and the canonical version in the Lhasa Kanjur. The focus of Seyfort Ruegg's interest was the question how the Tibetan traditions dealt with the *tathāgatagarbha* doctrine, and in particular how they interpreted the formulation of it in the *TGS*.

Only in 1995 was the first complete translation of the *TGS* directed at a more general public published in a Western language. It is contained in the volume called *Buddhism in Practice*. The translator, William Grosnick, based himself on the Chinese rendering by Buddhahadra, and in an introduction described the main tenets of the sūtra. Among modern studies of the *TGS*, the translation by Buddhahadra has received notably more attention than the one by Amoghavajra. This may be due to the (erroneous) belief that the recension by Buddhahadra was the earlier and more influential one.²⁰⁵ Also worth mentioning is the rendering into Spanish of a passage from the Chinese translation of Amoghavajra (0F–0H) and Buddhahadra (0M–1B). This translation, by Fernando Tola and Carmen Dragonetti, also appeared in 1995, in the *Revista de Estudios Budistas*.

Further, the *TGS* has been the subject of variously lengthy treatments, of which I will mention the most important ones. Among them, Matsumoto Shirō's *Zen shisō no hihanteki kenkyū* (*A Critical Study of Zen Thought) 禅思想の批判的研究 (1994) is by far the most extensive and profound. Pages 411–543 contain a study of the *TGS* and *TGS*-related passages in other sūtras. From an ample philological basis, he argues in a very transparent way that the introduction of the term *tathāgatagarbha* into the *TGS* was closely connected with the word *padmagarbha*, and that the former should be interpreted as a *tatpuruṣa* compound. Moreover, he demonstrates that the *Saddharmapuṇḍarikasūtra* had a crucial impact on the origin of the *TGS*. He also translates core passages of the *TGS* and deals with the different strands of the sūtra's transmission.

Nakamura Zuiryū, who two years earlier had published a new edition of the Sanskrit text of the *Ratnagoṭravibhāga(vyākhyā)* facing the Chinese translation, had already in 1963 pointed out some of the differences between the two available Chinese versions of the *TGS* and dealt with catalogue entries bearing on the lost translations. His conclusion that the verses of the *TGS* reproduced in the *Ratnagoṭravibhāga* must be based on the recension represented by the

²⁰⁴ Bu ston cites passages from 1A–1B and 8B.

²⁰⁵ See section 1.1, where I argue against this view.

translation of Amoghavajra and the Tibetan (= *TGS*₂) can now be fully confirmed. Another interesting, though somewhat biased contribution is that of Kariya Sadahiko (1979), who deals with the doctrinal relation between the *Lotus Sūtra* and the *TGS*. I (1999) have briefly responded to his criticism of the *TGS*, which in his article he characterizes as being beholden to an intellectual approach. The “fundamental difference” which he claims to exist between the *Lotus Sūtra* and the *TGS* (and which he associates with a step towards monastic dominance) requires further illustration and textual evidence in order to gain plausibility. Finally, there is a recent contribution by Kaneko Yoshio (1998) centering on the *TGS*. The author creatively analyzes the nine similes from a Jungian perspective and describes how they can be interpreted as documents of a “process of individuation.”

B An Annotated Translation of the *Tathāgatagarbhasūtra* into English

My translation of the *Tathāgatagarbhasūtra* is intended to mirror the Tibetan syntax closely and so to render the text as literally as possible. In many instances, however, where the English wording would have become incomprehensible or the sentences too long, I have taken the liberty of adapting the wording to a less Buddhist-Hybrid style. My own additions to the translations are placed in brackets, and I have usually added the Sanskrit underlying the Tibetan in parentheses whenever crucial technical terms appear or the Tibetan translation deviates considerably from the meaning of the conjectured Sanskrit equivalent. The reader should bear in mind that the main goal of this study is to throw light on the sūtra in the form it existed in India. Therefore, though my translation follows the Tibetan text, I render many Tibetan terms based on an understanding of the background of their Sanskrit counterparts; that is, where doubts arise, I give preference to the *TGS* as it was possibly understood in India. To translate the sūtra according to how it may have been read by Tibetans would, of course, be a different approach, one fruitful in its own right.

This same guideline holds true for the translation of Tibetan verbal prefixes such as *kun tu* or *rab tu* into English. I have only tried to translate them explicitly into English when they do not simply function as formal elements (to render a Sanskrit prefix literally) but entail a meaningful modification of the verbal expression.¹

English phrases in *italics* indicate that the phrases are embedded in a different way in the Tibetan sentence. However, I only refrained from following the syntax of the Tibetan sentence if the Tibetan did not make any sense or obviously contradicted the main line of thought of the sūtra. All passages of this kind are extensively discussed in the notes.

Underlined terms are not found as such in the Tibetan text, but are the result of an emendation from my side not based on any of the textual representatives of *Tib*.

¹ See the passage in the *sGra sbyor* concerning the translation of verbal prefixes into Tibetan in Simonsson 1957: 255f.

[0 Frame story]

[0A Title and invocation]

In Indian: *Ārya-tathāgatagarbha-nāma-mahāyāna-sūtra*.

In Tibetan: The Holy Mahāyāna sūtra called *Tathāgatagarbha*.

Homage to all buddhas and bodhisattvas (*namaḥ sarvabuddhabodhisattvebhyaḥ*)!¹

[0B Setting]

At one time I heard the following:² In the hot months³ ten years⁴ after [his] complete awakening (*abhisambuddha*), the Exalted One (*bhagavat*) was staying on the mountain Vulture Peak (Gṛdhra-kūṭa) near Rājagrha, in the Candanagarbha pavilion (*kūṭāgāra*) of Ratnacchatra palace (*prāsāda*),⁵ together with a great community of monks (*bhikṣusamgha*), fully a hundred thousand [in number]. The monks [were both] *śrāvakas* under training and [those] no [longer in] need of training;⁶ almost all [of them were] honorable ones (*arhat*) [whose] contaminations were stopped (*kṣiṇāsrava*), [who were] free of defilements (*niṣkleśa*), [who] had attained mastery (*vaśībhūta*), [with] completely liberated minds and insight (*suvimuktacitta*, *suvimuktaprajña*), of noble race (*ājāneya*), [powerful like] great elephants (*mahānāga*), [whose] duties were done

¹ *Bth* lacks the invocation. It adds *bam po dang po* instead. *Ch*_{1,2} start with 0B after the colophon.

² Skt. *evaṃ mayā śrutam ekasmin samaye bhagavān...*: It seems that already among Indian commentators such as Buddhaghosa the two alternatives of combining *ekasmin samaye* (*dus gcig na*) either with *evaṃ mayā śrutam* or with *bhagavān ... viharati sma* were current (see Brough 1950: 420). As all of the collated Tibetan texts of the *TGS* divide the sentence after *dus gcig na* /, I based my translation on the Tibetan punctuation. For a comprehensive bibliography on this issue see Schoening 1995a: 200 and also Tola and Dragonetti 1999.

³ *Bth* and *Ch*₁ do not mention the hot months (*shin tu tsha ba'i dus kyi tshé*).

⁴ *Bth* (*lo bcu bdun*): “seventeen years....”

⁵ (1) The Vulture Peak near Rājagrha appears in many sūtras as the place where the Buddha and his disciples gather, whereas the Candanagarbha pavilion seems to be found only in the *TGS*. I understand the compound **ratna-cchatra-prāsāda-candana-garbha-kūṭāgāra* partly as an *iti*-compound (parallel to e.g. *GV* 434.14: *dharmadhātu-dīk-samavasaraṇa-garbham nāma kūṭāgāram*). The fact that *-garbha* is not found in *Ch*₁ does not necessarily qualify it as a later addition. Cf. e.g. *DbhS* A.7f.: *maṇiratnagarbhe ... prāsāde* where a rendering of *garbha* is lacking in Buddhahadra's translation (摩尼寶殿上) but is found in the earlier translation by Dharmarakṣa (如意藏珠妙寶殿上). The choice of *garbha* as part of the name of the pavilion in the *TGS* might have been influenced by the title of the sūtra itself. But also the imagery of the lotuses rising into the sky from the pavilion (section 0G) qualifies the pavilion as a kind of womb (*garbha*) which gives birth to the flowers. Matsumoto (1994: 413, n. 5) stresses the analogy to the attribute *candana-gandha* of the rising stūpa in the *SP* (239.1ff.) by which the name *candana-garbha* could have been inspired (cf. Zimmermann 1999: 163, n. 44).

(2) For *kūṭāgāra* as “gabled mansion” or “roofed pavilion on any story of a palace” see Chandra 1950: 177f., Coomaraswamy 1928: 262f., and Bollée 1986, 1989.

(3) *Ch*₁ shows *candra* (月) instead of *chattra*. *Ch*₂ lacks a rendering of *prāsāda*. Apart from the location Rājagrha, *Ch*₂ also mentions Mṛgāramāṭṛ (鹿母). However, the Mṛgāramāṭṛ palace is not located in Rājagrha but in Śrāvastī (see *MPPU*_L I 181, n. 3).

⁶ (1) See the parallel *SP* 1.5-2.9: ... *mahatā bhikṣusamghena sārđham dvādasabhir bhikṣusataiḥ ... anyābhyāṃ ca dvābhyāṃ bhikṣusahasrābhyāṃ śaikṣāśaikṣābhyāṃ* /: “... was accompanied by a great community of monks, 1200 monks [in number] ... and the two other [groups of] a thousand monks [each, i.e.,] the [monks] under training and [those] no [longer in] need of training.” Further also *Kpuṇ* 1.5–2.14. *Bth* and *Ch*₂ only have a thousand instead of a hundred thousand of monks.

(2) *Ch*₁ mentions only the great community of a hundred thousand monks without further differentiation and lacks the list of attributes which follows in *TGS*₂.

(*kṛtakṛtya*), [whose] tasks were performed (*kṛtakaraṇīya*), [who had] laid down [their] burden (*apahr̥tabhāra*), [who had] reached their own goal (*anuprāptasvakārtha*), [in whom all] the fetters to existence were eliminated (*parikṣiṇabhavasam̐yojana*), [whose] minds were completely liberated by perfect knowledge (*samyagājñāsvimuktacitta*), and [who had] attained excellent supremacy in the control over the whole mind (*sarvacetovaśiparama-pāramiprāpta*).⁷

[0C Enumeration of the monks]⁸

[Among] the fully hundred thousand monks were the venerable (*āyusmat*) Mahākāśyapa, the venerable Uruvilvākāśyapa, the venerable Nadīkāśyapa, the venerable Gayākāśyapa, the venerable Mahākātyāyana, the venerable Mahākauṣṭhila, the venerable Vakula, the venerable Revata, the venerable Subhūti, the venerable Pūrṇamaitrāyaṇīputra, the venerable Vāgīśa, the venerable Śāriputra, the venerable Mahāmaudgalyāyana, the venerable Ājñātakaunḍinya, the venerable Udāyin, the venerable Rāhula, the venerable Nanda, the venerable Upananda, the venerable Ānanda and others.⁹

[0D Description of the bodhisattvas]

Also accompanying him were bodhisattva-*mahāsattvas*¹⁰ who had come together from various buddha-fields (*buddhakṣetra*)—as many as the sands of sixty

⁷ (1) This list of attributes of *arhats* appears with a few variations also in *MVy* 1075–1088; cf. also *SP* 1.6–1.9, *Kpuṇ* 1.6–2.1 and Lamotte 1962: 98, n. 2; for interpretations of most of the attributes see *MPPU_L* I 203–219. Unusual in the *TGS* is *phal cher*. The above-mentioned sources show *sarva* instead (*sarva* also in *Bth: kun*). The use of *phal cher* is in line with the differentiation into *śaikṣas* and *āśaikṣas* in the passage above.

(2) *Ch₂* lacks *kṛtakaraṇīya* (so does *Bth*) and *samyagājñāsvimuktacitta*. In some instances the Chinese shows an understanding different from the Skt.: 獲得正智 (“attaining of the right knowledge”) for *ājāneya* agrees with the Tibetan (*cang shes pa*) and is interpreted in this way in the **Mahāprajñāpāramitāsāstra* (*MPPU_L* I 211f.). See also *BHSD* s.v. *ājanya*; 猶如大龍 (“like a great dragon”) for *mahānāga*: also this interpretation is found in the **Mahāprajñāpāramitāsāstra* (*MPPU_L* I 212f.; so also *Bth: klu chen po*); 到於彼岸 (“arrived at the other shore”) seems to be an abbreviated rendering of *sarvacetovaśiparamapāramiprāpta*. For the analysis of the term *sarvacetovaśiparamapāramiprāpta* as a *dvandva* see *AAĀ* 10.10–12 and also *Bth*.

(3) According to my understanding, *sha stag* in 0B.11 and 0D.7 emphasizes the comprehensiveness of the group concerned (“all and not less than all”). *Sha stag* can function as an equivalent for *eva* (see *ŚpŚ* 131: ... *sarvāny eva* ... *mahitāni ca* // = *de dag kun kyang* ... *bkur ba sha stag lags* /; the following commentary is misleading), but is in most cases introduced by Tibetan translators without any Skt. correspondence: e.g. *Sukh: sangs rgyas kyi zhing de 'i byang chub sems dpa' rnam ni 'di lta bu sha stag ste* / for *īdrśā* ... *tasmīn buddhakṣetre bodhisattvā* ... (p. 298); further *Sukh* pp. 274, 276. The reconstructed Skt. *sarva* for *sha stag* in the *Akṣayamatīnirdeśasūtra* (Braarvig 1993a: 12.8; reconstructed in Braarvig 1993b: 47.7) is not confirmed by Skt. sources. Further see *Tshig mdzod* 2823: *sha stag: 'ba' zhiḡ gam kho na* /.... In combination with the term *phal cher*, I thus translated *sha stag* as “almost all [of them].”

⁸ 0C is not found in *Ch₁*.

⁹ *Ch₂* has Kauṣṭhila instead of Mahākauṣṭhila, lacks Pūrṇamaitrāyaṇīputra and Ājñātakaunḍinya. *Bth* lacks Mahākātyāyana and Upananda. Ānanda is usually thought not to have attained arhatship (see e.g. *SP* 2.8 where he is attributed the title of a *śaikṣa* whereas the *arhats* are called *mahāśrāvakas*; *ASP_{UV}* 8.22f.: ...*ekam pudgalam sthāpayitvā yad ut ' āyusmantam ānandam* //; for the reasons why he is not regarded as an *arhat* see *MPPU_L* I 222–225).

¹⁰ *Mahāsattva* is a common epithet of bodhisattvas. As Kajiyama 1982 showed, the canonical meaning of the term “bodhisattva” can be identified as “[person] who clings to *bodhi*” (Pā. *satta*: p.p. of the root *sañj*). Later the meaning of *sañj* became mainly associated with the negative “clinging (to sensual desires)” and the understanding of *sattva* as “energy” became prevailing. The

Ganges Rivers (*ṣaṣṭigaṅgānadīvālukāsama*). [They were] all of them¹¹ [only] one lifetime away [from perfect awakening] (*ekajātipratibaddha*)¹² and had attained the [five] great supernatural faculties,¹³ the [ten] powers (*bala*) and the [four kinds of] self-assurance (*vaiśāradya*), [had] venerated many myriads (*koṭīniyutaśatasahasra*) of buddhas and had set in motion the wheel of the Dharma [which] never regresses (*avaivartyadharmacakrapravartaka*). It happened that sentient beings of immeasurable, innumerable world systems (*lokadhātu*)¹⁴ attained non-regression in [their striving after] supreme and perfect awakening (*anuttarasamyaksambodhi*) from hearing their names only.¹⁵

[0E Enumeration of the bodhisattvas]¹⁶

[Among them were] the bodhisattva-*mahāsattvas* Dharmamati, Sindhmatī, Vyāghramatī, Arthamatī, Ratnamatī, *Pravaramatī, Candraprabha, *Ratnacandraprabha, *Pūrṇacandraprabha, Mahāvīkrāmin, *Aprameyavīkrāmin, Anantavīkrāmin, Trailokyavīkrāmin, *Acalapadavīkrāmin, Mahāsthāmaprāpta, Avalokiteśvara, Gandhahastin, *Gandharatī, *Gandharatīśrī, Śrīgarbha, Sūryagarbha, Ketu, Mahāketu, *Vimalaketu, *Anantarātnayaṣṭi, *Tyaktarātnayaṣṭi, *Vimalarātnayaṣṭi, Prāmodyarāja, *Sadāpramudita, Ratnapāṇi, Gaganagaṅṅa, Meru, Sumeru, Mahāmeru, *Guṇaratnāloka, Dhāraṇīśvararāja, Dhāraṇīmṇdhara, *Sarvasattvarogānīvarṭana, *Prāmodyamanas, *Khinmanas, *Akhinna, *Jyotiṣkara, Candana, *Īhāvīvarta(na), *Aprameyābhigarjitasvara, *Bodhisamutthāpana, Amoghadarśin, Sarvadharmavaśavartin, the bodhisattva-*mahāsattva* Maitreya, Mañjuśrī as a young man (*kumārabhūta*) and other bodhisattva-*mahāsattvas*, as many as the sands of sixty Ganges Rivers.

[0F Other participants]

Also accompanying [him] were an immeasurable [number of] divinities (*deva*), snake-gods, (tree) spirits, celestial musicians, demons, man-birds, man-horses,

term *bodhisattva* was accordingly analyzed as “[person] whose energy [is directed towards] *bodhi*.” Parallel to this, the compound *mahāsattva* could be understood as “[person] of great energy.”

¹¹ *Yang* in 0D.2 (*thams cad kyang*) expresses comprehensiveness (Skt. *api*): “all without exception.” This aspect is emphasized by *sha stag* in 0D.7 (see n. 7 (3) above).

¹² Literally: “hindered [from awakening by only] one birth.”

¹³ For the five or six *abhijñās* see *MPPU_L* IV 1809ff.

¹⁴ *Tshad med grangs med pa* (*apramāṇāsamkhyeya*) could also refer to *sems can*.

¹⁵ (1) Differences in the Chinese versions: *Ch₁*: Instead of “various buddha-fields”: “innumerable buddha-fields” (無量佛刹); missing are the characterizations of the bodhisattvas as *ekajātipratibaddha* and *vaiśāradyaprāpta*; the elements *abhijñā* and *bala* are rendered by 精進力 (*vīryabala*), one of the *pañca balāni* (see *MVy* 983–987; *MPPU_L* III 1127; 1200); missing are also the “immeasurable, innumerable world systems”; for *anuttarasamyaksambodhi*: 無上道.

According to *Ch₂*, sentient beings attained non-regression just by *praising* their names (纏稱名). However, the same matter of attaining non-regression by *hearing* names is also attested for the Tibetan version of the *RCaP* (40–42): ... *rigs kyi bu 'am rigs kyi bu mo yang rung de bzhin gshegs pa dgra bcom pa yang dag par rdzogs pa 'i sang rgyas ... de dag gi mtshan thos na bla na med pa yang dag par rdzogs pa 'i byang chub las phyir mi ldog par 'gyur ro //*.

(2) The term *avaivartyadharmacakrapravartaka* or *avaivartika*^o is typical for the *SP* (see *BHSD* s.v. *avaivartya*, *°tika* and *SP_i*). Its interpretation, however, is not at all clear. Does *avaivartya* refer to *dharma*, to *cakra*, or to both of them? Or should we assume a “wheel of the Dharma for the *avaivartyas*,” or even a “wheel of the Dharma by which one becomes *avaivartya*”?

¹⁶ For a detailed analysis of the bodhisattva names in the four translations and the meaning of the asterisk see appendix A. In *Ch₁₂* the designation *bodhisattva* is inserted after each name.

serpent-beings,¹⁷ human beings (*manuṣya*) and [further] non-human beings (*amanuṣya*).

Then, after the Exalted One had been surrounded (*parivṛta*) and honored (*puraskṛta*) by many hundreds of thousands of assemblies,¹⁸ [he] was honored, venerated, worshiped and revered by kings, chief ministers (*mahāmātya*), guild leaders (*śreṣṭhin*), noblemen (*grhapati*), ministers (*amātya*), citizens (*naigama*) and country folk (*janapada*).¹⁹

[0G The manifestation of supernatural phenomena]

At that time, after having been served food, the Exalted One withdrew for meditation in that same Candanagarbha pavilion,²⁰ whereupon through the power of the Buddha appeared myriads of lotuses [coming out] from the Candanagarbha pavilion, with myriads of petals, as large as the wheels of carts (*śakaṭacakrapramāṇa*), colorful and not [yet] open.²¹ The [lotuses] then rose into the sky,²² covered this whole (*sarvāvat*) buddha-field, and remained²³ [there] like a jewel canopy (*ratnavitāna*).

¹⁷ The legendary beings mentioned are very common in Indian literature: *nāga*, *yakṣa*, *gandharva*, *asura*, *garuḍa*, *kiṃnara*, *mahoraga*.

¹⁸ Literally: “... was then surrounded (*parivṛta*) and placed in front (*puraskṛta*)....”

¹⁹ (1) My translation “noblemen” for *grhapati* (*khyim bdag*) is inferred from the common combination of *grhapati* with *śreṣṭhin* (see e.g. *RGVV* 47.17). Further see *BHSD*: “capitalist, guild-leader” and *PTSD*: “wealthy Noble” for *grhapati*.

(2) *bsTi stang du byas / bla mar byas / rim gror byas shing mchod do* represent more or less synonymous expressions. Cf. e.g. *SP* 5.7f.: *satkṛto gurukṛto mānitaḥ pūjito 'rcito*.

(3) *Ch*₁ lacks the enumeration of the worshipers in the second part of 0F. Among the first group, human beings and *amanuṣyas* are missing. *Ch*₂ adds before the first enumeration: 無量世界中: “in the immeasurable [many] world systems”; for “citizens and country-people”: 諸人衆 (*Bth*: *grong 'dal¹ dang : sems can rnamis* [¹ for 'dab]).

²⁰ For *nang du yang dag (par) 'jog*, Skt. *pratisamlayana*, see *MVy* 1488 s.v. *dhyānāni*, *MVy* 1642 s.v. *yogāṅgāni* and *BHSD* s.v. *pratisamlayana* as well as the entries before and after; for *nang du yang dag 'jog la zhugs pa* (for p.p. *pratisamlayana*) see *SP* 182.1–4: ... *bhagavān ... vihāraṃ praviṣṭaḥ pratisamlayanāya tathā pratisamlayana ca ... vihāraṣṭhita evāsīt* // [O 175b4-7: ¹ *asthāsīt sakṛdbaddhena paryamkena for evāsīt*] = *SP*₁ 80a3–a5: ... *bcom ldan 'das ... nang du yang dag 'jog la 'jug pa'i phyir gtsug lag khang du zhugs so* // ... *'di ltar / ... gtsug lag khang du gnas te nang du yang dag 'jog la zhugs so* //. I assume that none of the representatives of Tib has transmitted the original wording as they have not taken *nang du* as part of *pratisamlayana*. Whereas *BJNQP*₁₂₃ have replaced ... *de nyid du nang du* ... by ... *de nyid kyi nang du*... and thus understood *nang du* as “inside” of the pavilion, *LST* have avoided the sequence *du nang du yang* (thinking of it as a slightly emended dittography?) by dropping *du nang*. *Ch*₁: 爾時世尊於梅檀重閣正坐三昧，而現神變。: “At that time the Exalted One was sitting on the Candana pavilion (*kūṭāgāra*), upright in absorption, and brought forth supernatural phenomena.” *Ch*₂: 爾時世尊於梅檀藏大樓閣中，食時之後，入佛神力。故從梅檀藏忽然涌出俱胝那由多百千蓮花。: (lit.:) “At that time, after the meal, the Exalted One on the great Candanagarbha pavilion entered the [state of having the] supernatural powers of a Buddha. And because of this, suddenly myriads of lotuses streamed out from the Candanagarbha [pavilion].” Alone *Bth* does not render *pratisamlayana* or have something similar.

²¹ *Ch*₁₂ and *Bth* also mention the scent of the flowers.

²² See *BHSD* s.v. *abhyudgacchati*; *SP* 241.15: ... *abhyudgamyopary antarikṣe vaihāyasam ...* = *SP*₁ 104a2: ... *mngon par byung ste / steng gi nam mkha' bar snang la*....

²³ *Kun tu gnas par gyur* to might be a translation of (*samantāt*) (*pari*)*samsthitā abhūvan*, (*samantāt*) (*pari*)*samstīṣhante sma* or something similar; cf. *SP* 390.10: ... *vaihāyase 'ntarikṣe samantān mahāpuṣpavitānaṃ parisamsthitam abhūt* // = *SP*₁ 166a5f.: ... *steng gi nam mkha' bar snang la me tog gi bla re chen pos kun du khebs par gyur to* // [see also *Bth*: *kun tu g.yog¹ ba...*; ¹ for *g.yo*]. *Kun tu gnas pa* could also represent a form of the root *samava-ssthā* (in this sense Matsumoto 1994: n. (8) to p. 413). The perfect passive participle (PPP) in combination with a form

In each calyx of the lotuses (*padmagarbha*) was seated, cross-legged (*paryāṅka*), the body of a tathāgata, emitting hundreds of thousands of rays of light and visible everywhere.²⁴ And all the lotuses were opened up in blossom.²⁵

[0H The fading of the lotuses]

Then, by the supernatural power (*adhiṣṭhāna*) of the Buddha all the petals of the lotuses, without exception, became dark, deep-black, putrid (*durgandha*) and disgusting, and no [longer] pleasing. But in the calyxes of the lotuses the bodies of the tathāgatas sitting cross-legged and emitting hundreds of thousands of rays of light were [still] visible everywhere.

Further,²⁶ this whole buddha-field became filled with the [rays of light from] the bodies of the tathāgatas sitting in the calyxes of the lotuses. This buddha-field became extremely beautiful [during] that time. Then at that time the whole²⁷ multitude of bodhisattvas and the four assemblies were extremely astonished (*āścaryaprāpta*) and filled with pleasurable excitement (*audbilya-prāpta*).²⁸

of the verb *bhavati* indicates that the action expressed by the PPP has occurred and that its result continues.

²⁴ The Skt. for *kun tu snang ba* could have been *saṃdṛśyate*. Almost identical parallels appear further down in 0H.3–5, 0I.4–6 and 0J.10–11. By replacing *snang ba* by *gda' ba* (Jä: “to be, to be there ...”) in 0J.11 (*Bth* here again *snang ba!*) *Tib* supports the understanding of *snang ba* as in my translation and not in the sense of “to illuminate” (cp. Matsumoto 1994: n. (10) to p. 413). In the passage here *Bth* employs *ldang* instead of *snang*. If this does not simply reflect a misreading of an eventual *dbu med* spelling, it could also represent Skt. *prādurbhavati*.

²⁵ (1) In order to describe the arising of circumstances in the past which last continuously, *Tib* employs a verb (preferably in its perfect form) and the perfect stem of the auxiliary verb 'gyur: 0G.2 (*zhugs par gyur*), 0G.6 (*byung bar gyur*), 0G.7f. (*khebs par gyur*), 0G.8f. (*kun tu gnas par gyur*), 0G.11 (*kha bye bar gyur*), 0H.3 (*mngon par dga' bar 'gyur ba ma yin par gyur*), 0H.8 (*shin tu mdes par gyur*), 0H.9f. (*shin tu ngo mtshar du gyur cing dga' bar gyur*), etc. This is probably influenced by the Skt. structure of a perfect passive participle together with an aorist of *bhavati* (see n. 23).

(2) In *Ch₁* it is not explicitly stated that the lotuses come out from the pavilion. The flowers are only said to have a *thousand* petals (so also *SP* 261.2: *sahasrapattre padme śakaṭacakraṃamātre ...* and *GV* 408.9: *... sahasrapattraṃ ...-padmam ...*); instead of *koṭīniyutaśatasahasra* (*Tib*, *Ch₂*) for the number of flowers: 數無量; instead of “buddha-fields”: 世界; the tathāgatas are not described as being in the *paryāṅka*-position; for the hundreds of thousands (of rays of light): 無量; the lotuses are said to blossom at the same time (同時舒榮).

Ch₂: in the beginning the lotuses are not characterized as not yet open. The flowers do not cover the *whole* but *all* buddha-fields. The flowers in the sky are further described as “being united with each other as a whole” (共相合成). *Ch₂* describes the tathāgatas in the flowers after mentioning the opening of the lotuses. This order seems more natural than the one given in the Tibetan. Further, the tathāgatas are said to be endowed with the *dvātriṃśanmahāpuruṣalakṣaṇas* (for the *dvātriṃśanmahāpuruṣalakṣaṇas* see *MVy* 235–267; *MPPU_I* 1.271ff.; *RGVV* III.17–25).

Instead of *kha ma bye ba* (lit: “[the lotuses with their] mouths not opened”) *Bth* reads: *snying po la 'dus*: “[with petals] contracted inside (*garbha*)”. Instead of *ratnavitāna* *Ch₂* and *Bth* are based on *ratnavimāna* (寶宮殿; *rin po che'i gzhäl med khang*): “jewel palace.” The reading *-vitāna* (*Ch₁*, *Tib*) is probably original and is attested in *SP* 112.10.

²⁶ The particle *kyang* could correspond to Skt. *punar*, which led to my rendering with “further.”

²⁷ Just as the confusion between *sarva* and *sarvāvat* documented at the end of the following n. suggests, it might also here be more plausible to assume an original *sarvāvān bodhisattvagaṇaḥ*: “the whole multitude of bodhisattvas.” See *SP_I* s.v. *bodhisattva-gaṇa*.

²⁸ (1) The four assemblies (*catasraḥ parśadaḥ*), as is well known, comprise *bhikṣus*, *bhikṣuṇīs*, *upāsakas* and *upāsikās* (see *MPPU_I* 1.232ff.).

(2) *Bth* (*ngo mtshar thob cing rmad du gyur pa thob par gyur nas* :) suggests *adbhuta*^o instead of *audbilya*^o. Since the *SP* only has the combination *āścaryaprāpta* (or ^o*bhūta*) – *adbhutaprāpta*

[0I Doubts of the onlookers]

[But] after seeing that supernatural display (*rddhyabhisamkāra*) of the Exalted One, [they] became uncertain (*samśayaprāpta*) [and questioned themselves]:

“What is the reason²⁹ that the petals of all these myriads of lotuses became so unsightly (*durvarṇa*), and that the[ir] stalks (*nāla*) too became unsightly, disgusting and not pleasing, whereas in the calyxes of the lotuses each body of the tathāgatas is [still] sitting cross-legged, and in that [they] emit hundreds of thousands of rays of light are visible everywhere as [something] extremely beautiful?”

Thereupon, [the Exalted One] motioned (*nimitta*) to the entire multitude of bodhisattvas and the four assemblies who had become uncertain to come closer.³⁰ At that time there was a [certain] bodhisattva-*mahāsattva* named Vajramati [who had also] gathered [with the others] in the Candanagarbha pavilion.³¹

[0J Questions of the bodhisattva Vajramati]

Then the Exalted One said to the bodhisattva-*mahāsattva* Vajramati:³²

“Son of good family (*kulaputra*), venture to question the Tathāgata, the Honorable One and Perfectly Awakened One,³³ with reference to an exposition on the Dharma!”³⁴

At the Exalted One’s permission, the bodhisattva-*mahāsattva* Vajramati, realizing that the world with [its] gods, humans and demons and all the

(instead of *audbilya*^o) when the formula contains only two links, *Bth* should here represent the original reading (see *SP*₁ s.v. *āścaryaprāpta*, ^o*bhūta*).

(3) *Ch*₁ and *Ch*₂ are speaking of the withering *in an instant*. *Ch*₁ attributes the withering to the *flowers*; the petals remain unmentioned (cf. Matsumoto 1994: 417). *Ch*₁ also does not mention that the buddha-fields become filled with the rays of light. The bodhisattvas and the four assemblies are expressed by 一切大眾. *Ch*₂ continuously speaks of “all” buddha-fields.

²⁹ The terms *rgyu* (*hetu*) and *rkyen* (*prataya*) function here as quasi-synonyms (see *BHSD* s.v. *prataya* (1)). Therefore my simplified rendering as “reason.”

³⁰ The addition “the Exalted One” is based on *Bth*. ‘*Dong ba* (*JNLSTP*₁) or rather *nye bar ’ong ba* (*Bth*) could translate *upa(sam)kramaṇa* or *upasthāna*. The sentence is missing in *Ch*_{1,2}.

³¹ Further discrepancies with *Ch*₁ and *Ch*₂: *Ch*₁: It is not mentioned that the supernatural display is seen. The withering, as in *Ch*₂, takes place in an instant. *Ch*₁ does not mention petals and stalks (so also *Ch*₂) and does not have the second part of the question (“..., *whereas in the calyxes* ...”). The last sentence is completely missing. In the question *Ch*₂ adds that the emitted light made the people rejoice (令人愛樂). At the end, *Ch*₂ describes Vajramati and the great multitudes as sitting in the pavilion with feelings of respect.

³² *Ch*₁ adds: 爾時世尊知諸菩薩大眾所疑....: “At that time the Exalted One understood what the great multitude of bodhisattvas had become uncertain about....”

³³ *De bzhin gshegs pa dgra bcom pa yang dag par rdzogs pa’i sangs rgyas* are the first three members (Skt. *tathāgato ’rhan samyaksambuddhaḥ*) of a standard set of names applied to buddhas. A traditional analysis of the whole formula can be found in *MPPU*_L I.126–144. The Tibetan rendering of *arhat* with *dgra bcom pa* (“the one who has overcome the enemies (of the mind)”) interprets *arhat* in the sense of *ari-han* (cf. *MPPU*_L I.127).

³⁴ The Skt. on which *chos can gyi gtam las rtsoms te / ... yongs su zhu bar spobs par gyis shig //* is based, could be **dharmyām/dharmīm kathām ārabhya ... pariṣreṣṭhā pratibhātu*. In the Skt. *pratibhātu* expresses a request like “Think of a question with reference to...!” *Ch*₁: 於佛法中諸有所疑恣汝所問。: “[Put forward] without reserve what you [want] to ask [with reference to] all doubts concerning the Dharma of the Buddha!” For *dharmya* see *BHSD* s.v. *dharmā* 3 and *SWTF* s.v. *kathā* 2. For *dharmyā kathā*: *Ch*₁: 佛法; *Ch*₂: 甚深法要.

bodhisattvas and the four assemblies, were anxious with doubts, then asked him the following:³⁵

“Exalted One, what is the reason this entire world system is covered with these myriads of such unsightly and putrid lotuses, yet in their centers sit cross-legged bodies of tathāgatas emitting hundreds of thousands of rays of light and visible everywhere, and now myriads of living beings,³⁶ seeing the bodies of the tathāgatas, raise their joined palms (*kr̥tāñjali*) in homage?”³⁷

[OK]

Then at that time the bodhisattva Vajramati uttered these verses:³⁸

[0.1] “Myriads³⁹ of buddhas are seated motionless in the center of lotuses: [with] such supernatural powers (*ṛddhi*) you display [them]. Never before have I seen [anything like] this!”⁴⁰

[0.2] “The [sight] of the leaders (*nāyaka*) emitting thousands of rays of light, covering this entire buddha-field [with their splendor, and] wonderfully displaying a facile mastery of the dharmas, [is] constantly beautiful.”⁴¹

³⁵ Instead of enumerating the single groups by name, *Ch₁* speaks simply of “all the great multitudes”: 諸大眾咸. *Ch₂* does not mention the *asuras*; in *Bth* the bodhisattvas are missing. A parallel to *zug rngu* “to be anxious (with doubts)” does not appear in *Ch₁₂*. Also the mentioning of the Exalted One’s permission (*gnang pas*) does not appear in *Ch₁* and *Bth*, but is made explicit by *Ch₂*: ... 承佛聖旨: “... [and Vajramati] was granted the holy order of the Buddha.”

³⁶ **Prāṇikoṭīniyutaśatasahasra*; *Ch₁*: 眾會悉; *Ch₂* erroneously attributes *koṭīniyutaśatasahasra* to the tathāgatas in the flowers, characterizing them as sitting in *añjali*-position “exalted” (儼然) and motionless. That in the Skt. text the subject should be the living beings and not the tathāgatas, is proved by the parallel in OM where *Ch₂* is in accordance with the other translations.

³⁷ Further divergences with *Ch₁*, *Ch₂* and *Bth*: *Ch₁* repeats in the question that the flowers rose to the sky and describes them as “innumerable.” Like *Ch₂* also *Ch₁* speaks of their withering “in one moment.” *Ch₁₂* do not mention the putrid smell of the flowers. In *Ch₁* the *paryāṅka*-position of the tathāgatas is missing.

³⁸ *Ch₂* and *Bth* add the attribute *mahāsattva* to Vajramati.

³⁹ With “myriads” I not only render *koṭīniyutaśatasahasra* but also smaller numbers in the verses like *koṭīśahasra* in this case and in 10.4, 11.1, 8.6, *koṭīśatasahasra* (OM, 2A) or even *koṭī* in 2.2 and 2.3. See also n. 57.

⁴⁰ *Ch₁* does not describe the buddhas as “motionless.” For the “center of the lotuses” (*dbus*): 蓮花藏. *Bth* uses *stobs* instead of *ston* (*rdzu 'phrul stobs; ṛddhibala*). However, *bala* is not found in any of the other versions.

⁴¹ (1) I understand *mdzad* in *pādas* a and b as emphasizing the autonomous aspect of the acts of the “leaders.” If *mdzad* is understood as a causative auxiliary in the sense of “the leaders causing [the tathāgatas in the flowers] to emit...,” the leaders would represent the buddhas generally and among them the Buddha on the Vulture Peak. However, this second alternative is contrary to the Chinese versions.

(2) *Ngo mtshar chos kyi rnam la rol mdzad pa*: The adverbial rendering of *ngo mtshar* (*āścarya*) follows *Ch₂* (see below). With the *dharmas* most probably supernatural qualities like the absorptions, the *ṛddhis*, *abhijñās*, etc. are meant. For similar expressions with *rol* (*Bth*: *rnam par rol; vikriḍati*) see *BHSD* s.v. *-vikriḍana(-tā)* and *vikriḍita*.

(3) The text in 0.2d is problematic. As a point of reference for the genitive, the subject “sight” had to be supplied. Variant OK, n. 16 (*kyis*) allows the following translation similar to *Ch₁*: “Through the leaders ... [the whole world?] is constantly beautiful.” However, a text in accordance with *Ch₂* (see below) is found in *Bth*: *'dren pa rnam ni rtag tu +++¹ po 'i² //* [¹ probably *bzang*; ² from *po yin* > *po yi* > *po 'i*? Or parallel to the genitive *kyi* in *Tib*?].

(4) The second half of the verse in *Ch₁*: 離垢¹諸導師莊嚴諸世界: “Flawless¹ [are] the leaders, decorated [are] the worlds.” [¹ Probably *niraṅgana* or *nirañjana* (離垢) instead of *nirantara* (*bar chad ma mchis*)]. *Ch₂*: 奇特於法而施戲彼諸佛等悉端嚴: “Those buddhas, showing in a wonderful way mastery in the *dharmas*, are beautiful.”

[0.3] “There, in the center of unsightly lotuses [with] disgusting petals and stalks, sit [tathāgatas], as if they [had] the nature of a jewel (**ratnasvabhāva*).⁴² Why have [you with your] supernatural powers (*rddhi*) created these [manifestations]?”⁴³

[0.4] “I see buddhas equal in number to the sands of the Ganges River, [and] I see the exquisite (**viśiṣṭa*) [manifestations] of the [Tathāgata’s] supernatural powers. Never before have [I] witnessed such a miracle (*vikurvita*) like this one existing right now.”⁴⁴

[0.5] “[I] implore the Highest among Humans (*dvipadottama*), the Divine (*deva*), to teach. [I] implore [him] to explain the reason [for this miraculous display]. [I] implore [him] to speak [with] solicitude (*anukampā*) [in order to] benefit the world. [I] implore [him] to remove the doubts of all embodied [beings] (*dehin*).”⁴⁵

[0L Introduction to the first simile]

Then the Exalted One said to the whole multitude of bodhisattvas, [including] the bodhisattva-*mahāsattva* Vajramati and others:

“Sons of good family, there is a sūtra of great extent (*vaipulya*) called *Tathāgatagarbha*.⁴⁶ In order to teach it the Tathāgata has produced these signs⁴⁷ [which] appeared [to you]. Listen therefore closely, be attentive, and [I] will teach [you].”⁴⁸

⁴² None of the other translations confirm *Tib* in this passage. In *Ch*₁ the comparison does not appear at all. *Ch*₂ compares the tathāgatas in the lotuses with the brilliant manifestation of a wonderful jewel (猶如妙寶而顯現). *Bth* also deviates: *de dag rnam’s kyang de la dga’ ba’ ste*: [‘*dga’ ba* for Skt. *rata*?: *rata* is probably a variant reading of *ratna*].

⁴³ *Ch*₁ speaks of the *sudden* withering of the flowers. Petals and stalks (stalks are also missing in *Ch*₂) are not mentioned.

⁴⁴ (1) The second ‘*di* of pāda d is not rendered in my translation. Could it result from *ni* as it is found in *Bth* (pāda b)? But see the similar formulation ‘*di lta bu’ di* in 0L.5 (*Bth*: *de lta bu*)!

(2) In *Ch*₁ *viśiṣṭa* does not appear; pādas c and d (of *Tib*) are abbreviated to a single pāda, and verse 0.5 (of *Tib*) is shortly expressed in pāda d (願為分別說): “[I] ask for a discerning explanation for [me/us] (為 short for 為我?)!” *Ch*₂, with 遊戲, does not translate *vikurvaṇa* or *vikurvita* but *vikriḍita*. Their meanings are synonymous (see *BHSD* s.v.). In *Bth* pāda b (of *Tib*) is missing.

⁴⁵ (1) *Tib* in 0.5c could also be translated as: “[I] implore [the one who] benefits the world to speak [from] solicitude...!” *Thugs brtse* (*Bth*: *thug brtse phyi ru*) probably reflects a form of Skt. *anukampā* as found in e.g. *SP* 41.1, 41.11, 147.4 (= VI.10c) and in the *ASP* (see *ASP*₁ s.v. *anukampāyai*). For the meaning “solicitude” of *anukampā* see Maithrimurthi 1999: 118 ff.

(2) *Ch*₂: “[I] kindly ask the One Worshipped by the Gods (天中尊) to expose the reason for [this] manifestation! [I] kindly ask to practice compassion [for] the benefit of the world in order to remove the doubts of all [beings]!”

(3) *Bth* corresponds in syntax with *Ch*₂ in the first half of the verse, but does not mention the gods. With *phyi ru* (*metri causa* for *phyir*) in *Bth* 0.5c the reasons for teaching are stated to be: “for the benefit of the world and from solicitude.” In pāda d *Bth* does not mention the removal of doubts but instead speaks of the establishing (‘*god*) of all living beings (in the *bodhi*?).

⁴⁶ Instead of “sūtra” *Ch*₂ reads 甚深法要 (“very profound Dharma discourse (*dharmaparyāya*)”).

⁴⁷ (1) The term *nimitta* (*mtshan ma*; *Bth*: *ltas* [emended for *lhas*]) is discussed in Schmithausen 1969a: n. 67. Apart from “appearance” it can also mean “symptom, omen, sign” (clearer: *pūrvanimitta*), as is the case in *SP* 233.1ff.: while digging for water on a dry piece of land, the discovery of wet earth and the spots of mud on the body of the digging people function as *pūrvanimittas* for the immediate appearance of water. The appearance of rays of lights as (*pūrva-*) *nimittas* before the teaching of a sūtra are common in Buddhist literature (see e.g. *SP* 6.6ff.; *TUSN* S 105b1ff. = *Q* 77b5ff.). See also *DNI* 220 where rays of light are a sign for the appearance of the

“Just so!” replied the bodhisattva-*mahāsattva* Vajramati and the whole multitude of bodhisattvas to the Exalted One, thereby acquiescing, and the Exalted One spoke:⁴⁹

[0M]

“Sons of good family, just as these unsightly, putrid, disgusting and no [longer] pleasing lotuses, supernaturally created by the Tathāgata,⁵⁰ and the pleasing and beautiful form⁵¹ of a tathāgata sitting cross-legged in [each of]

god Brahman. The emitting of light through the Buddha is discussed in *MPPU_L* I.431ff. For occurrences of other kinds of *pūrvanimittas* see Lamotte 1962: 335.

(2) *sNang ba'i mtshan ma* in the *TGS* could also represent *avabhāsanimitta*, “light [emitting] signs.” However, neither *Ch₁* (故現斯瑞) nor *Ch₂* (是故先現如是色相) seem to support such an interpretation. In the passage above, the *nimittas* are the supernatural manifestations of the beautiful and then withered lotuses with the tathāgatas in their centers.

⁴⁸ In *Ch₁* the Tathāgata does not announce that he is now going to teach.

⁴⁹ (1) For *ltar nyan pa*, Skt. *pratiśṛṇoti*, the *pW* gives, next to others, the two following meanings: “(1) hinhören, sein Ohr leihen ... — Jmd. (Gen. ...) ... — 2) bejahen, zusagen, versprechen; mit Acc. der Sache und Dat. oder Gen. der Person.” In this passage the second meaning (which is the only one found in Pā.) fits the context. The identical formulation appears in e.g. *Kpuṅ* Q 151a6f. (*rin po che rnam par snang byed kyis bcom ldan 'das de bzhin no zhes gsol te bcom ldan 'das kyi ltar nyan pa dang / bcom ldan 'das kyis byang chub sems dpa' rin po che rnam par snong byed la 'di skad ces bka' stsal to //*) with its corresponding Skt.: *sādhu sādhu bhagavann iti Ratnavairocano bhagavataḥ pratyasrauṣīt / bhagavān Ratnavairocanaṃ bodhisattvaṃ mahāsattvaṃ etad avocat / (Kpuṅ 7.13ff.; for pratiśṛṇoti with the genitive case see also RGV I.90a: ... tasya pratiśrutya)*. It was probably not at all easy for later Tibetans to understand the genitive, based on the Skt., as well as *ltar* as part of the verbal compound and the special meaning of *ltar nyan*. This is documented by the redactional variants of *P₃*. The above-cited passage of the *Kpuṅ* is introduced with a wording nearly identical to the *TGS*. The Skt. runs: *ṣṛṇu kulaputra sādhu ca suṣṭhu ca manasikuru bhāṣiṣye 'ham te / (Kpuṅ 7.12f.); see also Kpuṅ 52.5f.*

(2) The passage *bcom ldan 'das kyi ltar nyan pa dang* is not found in *Bth*. However, the position of the syntactical units in *Bth* agrees (in contrast to *Tib*) closely with the Skt. *Bth* reflects also the vocative *bhagavan* (*dge'o : bcom ldan 'das shes ...*) which *Tib* constructs as a prepositional object (*bcom ldan 'das la legs so zhes ...*).

(3) In the last sentence *Bth* and *Ch₂* add the epithet *mahāsattva* to the bodhisattvas. *Ch₁* simplifies the last passage: 感言。善哉，願樂欲聞。佛言。....: “All said: ‘Just so! [We] want to listen!’ The Buddha said:....” So also *Ch₂*: 善哉，世尊，願樂欲聞。佛言。....

⁵⁰ *Ch₁* shortens: 如佛所化無數蓮花忽然萎變....: “Just as innumerable lotuses supernaturally manifested by the Buddha, withered in an instant,....”

Ch₂ also speaks of the withering in an instant (忽然之間).

⁵¹ (1) In contrast to the chapters before, *Tib* speaks here of the forms (*gzugs; *rūpa?*) of the tathāgatas (but *Bth*: *sku* as before; *Ch₂* (佛形) could also stand for *rūpa*; *Ch₁*: 化佛). Unlike alternative expressions for “body” like *aṅga*, *kāya*, *vapus* or *śarīra*, *rūpa* stresses the phenomenal aspect of the body, i.e., its shape and physical appearance.

(2) The triplet *mdzes pa / gzugs bzang ba / blta na sdug pa* can also be found in Pā. canonical literature (*abhirūpa dassaniya pāsādika*). It expresses pleasing and beautiful appearance. See *PTSD* s.v. *abhirūpa, dassaniya*: e.g. referring to the night (*DN I 47*), to a brahman (*DN I 114*), to a woman (*AN II 203*); *SP*: *prāsādiko darśaniyo 'bhirūpaḥ* (425.13) = *mdzes pa blta na sdug pa gzugs bzang ba* (Q 181b6); *abhirūpaḥ prāsādiko darśaniyaḥ* (441.14) = *gzugs bzang ba mdzes pa blta na sdug pa* (Q 189a1). In the translation I have restricted myself to the rendering of only two main aspects of this triplet.

Ch₁ mentions innumerable and supernaturally manifested buddhas in the lotus calyxes with beautiful, splendid appearance (無量化佛在蓮花內，相好莊嚴). *Ch₂*: 如是花中而現佛形，結跏趺坐，放百千光明，相好端嚴，人所樂見。....: “[and] just as in the flowers forms of buddhas are manifested..., with beautiful and dignified appearance, [which is] what humans desire to see/take joy in seeing,....”

the calyxes of these lotuses, emitting hundreds of thousands of rays of light,⁵² [are such that when they are] recognized by gods and humans, [these latter] then pay homage and also show reverence [to them],⁵³ in the same way, sons of good family, also the Tathāgata, the Honorable One and Perfectly Awakened One,⁵⁴ [perceives] with his insight (*prajñā*), knowledge (*jñāna*) and tathāgata-vision⁵⁵ that all the various sentient beings⁵⁶ are

⁵² (1) *Ch*₁ has simply: 放大光明.

(2) There are two alternative ways to explain the reading *'khod pa* in 0M.5. *'Khod pa* could function as an auxiliary verb stressing the aspect of duration of *'gyed pa* in the sense of “emitting continuously...” The second, and in my eyes more plausible, alternative is that *'khod pa* was first associated with the triplet *mdzes pa / gzugs bzang ba / blta na sdug pa* (“sitting [there with] a pleasing and beautiful shape”). This is how *'khod pa*, which is rendered as *bzhugs pa* in *Bth*, appears in *Bth* (*bzang zhing sdug la gzugs dang ldan par bzhugs par*). See also the parallel syntax in *Tib* 0M.13f. where the adverbial *mi g.yo bar* is associated with the following *'khod pa*. It is therefore possible, that the original position of the triple adjectives before *'khod pa* was only altered in a second step of revision whereas *'khod pa* remained there. That the emission of light was originally mentioned before the description of the beauty of the buddha forms is also confirmed by *Ch*₂.

⁵³ (1) Apart from gods and humans *Ch*₂ also mentions dragons (for *nāgas*), *yakṣas*, *gandharvas*, *asuras*, *garuḍas*, *kiṃnaras*, *mahoragas*, *amanuṣyas* “and others” (see n. 17). *Ch*₁ abbreviates to 衆. (2) *mChod pa 'i las ... byed pa* could mirror a *figura etymologica* in the Skt.: *pūjākriyām karoti* or *°kāraṃ karoti* (for *kāraṃ karoti* see *BHSD* s.v. *kāra*¹). The counterpart of *phyag 'tshal zhing / mchod pa 'i las kyang byed pa* in *Ch*₁: 恭敬; *Ch*₂: 禮拜供養. The last part (from “[are such when they are]...”) in *Ch*₁: 衆觀希有, 靡不恭敬: “..., [are such that when] the multitudes see [them, they] are astonished (*āścarya*, *adbhuta*) [and] there is none who does not pay homage.”

⁵⁴ Instead of “Tathāgata, Honourable One and Perfectly Awakened One” *Ch*₁ reads 我.

⁵⁵ The Skt. probably had a compound like **svaprajñājñānatathāgatacakṣus* (so also *Bth*) and could also be analyzed as a *karmadhāraya* in the sense of “his tathāgata vision [consisting in] insight and knowledge.” See *RGVV* 59.2: *asaṅgāpratihataprajñājñānadarśanam ...* (*RGVV*₁ without *-prajñā-*). The reading 以佛自己智慧光明眼... of *Ch*₂ is probably based on Skt. *-prabhā-* (光明) instead of *-prajñā-*. The appearance of *prajñā* here is surprising, as this term is only found within the *TGS* in one other passage as one of the attributes of the *arhats* at the beginning (*shes rab shin tu rnam par grol ba, suvimuktaprajñā*; 0B.7). However, also the assumption that the correct reading was *-prabhā-* is difficult to prove, as I have not found any such compound in other texts. *Ch*₁ simply reads 佛眼. Similar sequences are found in the context of awakening when the Buddha realizes the four Noble Truths (e.g. in *Vin* I 11: *cakkhum ... ñāṇam ... paññā ... vijjā ... āloko ... udapādi*). The terms in the *TGS* could well be inspired by such canonical passages or their counterparts in the Sanskrit. A classification of the different visions (*cakṣus*) is given in *MPPU*₁ V.2260ff. In the *TGS* itself only the *divya-*, *buddha-* and *tathāgata-cakṣus* are mentioned. These supernatural eyes enable to perceive the buddha-nature within sentient beings or, in case of the divinity and the person with divine vision, it leads to the perception of the precious substance hidden in inferior materials.

⁵⁶ *Srog chags su gyur pa*, Skt. **prāṇaka-jāta* (*MVy* 4908), **prāṇa-bhūta* (*MVy* 4917), **prāṇi-jāta* (cf. also n. 87): for *-jāta* at the end of a compound the *pW* shows: “Alles was — heisst, irgend ein —, allerhand —.” The whole term *sems can srog chags su gyur pa*, Skt. **sattvāḥ prāṇijātāḥ* could thus be translated as “sentient beings, [i.e.,] all that lives” or “living beings of all kinds of life.” *Prāṇijātāḥ* emphasizes the inclusion of all different kinds of life similar to 0M.16f. (... *srid pa 'i 'gro ba thams cad*) which designates all different states of existences. For the discussion of Pāli *pāṇa* see Schmithausen 1991 where the specific meaning of *pāṇa* “animals” is noted (p. 19). Pāli *pāṇa* are explicitly said to have buddha-nature in 7B.3–6. Supposing, as another possibility, *sattvā prāṇabhūtāḥ* as the underlying Skt., Schmithausen 1991: 58f. points out: “... ‘pāṇa’ is, both in Buddhist and Jaina sources, also used in a way which suggests comprehensiveness, e.g. in phrases like ‘all *sattas*, *pāṇas*, *bhūtas*....’ ... originally in these phrases the terms are used as quasi-synonyms, with a tendency towards co-extensiveness,....” Also this analysis would fit well with the supposed focus on animals. For *p(r)āṇabhūta* see Norman 1987: 39f. *Ch*₁: 一切衆生; *Ch*₂: 一切有情.

encased in myriads⁵⁷ of defilements,⁵⁸ [such as] desire (*rāga*), anger (*dveṣa*), misguidedness (*moha*), longing (*trṣṇā*) and ignorance (*avidyā*).⁵⁹

And, sons of good family, [he] perceives that inside sentient beings encased in defilements sit many tathāgatas, cross-legged and motionless, endowed like myself with a [tathāgata’s] knowledge and vision.⁶⁰ And [the Tathāgata], having perceived inside those [sentient beings] defiled by all defilements⁶¹ the true nature of a tathāgata (*tathāgatadharmatā*)⁶²

⁵⁷ *Bye ba phrag ’bum, koṭīśatasahasra* are literally “a hundred thousand of ten-millions.” The terminology shifts here from *koṭīniyutaśatasahasra* (0D till 0K) to *koṭīśatasahasra*.

⁵⁸ (1) *Nyon mongs*, Skt. *kleśa*, Pā. *kilesa*: My rendering “defilements” corresponds with the semantic of *kilesa* in the Pāli Canon (there mostly *upakkilesa*). Originating from this, *kilesa* can also have the meaning “wickedness, desire, etc.” Furthermore, based on the theories of the Abhidharma and on the influence of standard Skt., *kleśa* is understood as “suffering, paining” (Schmithausen 1987b: 246f.). As the enumeration shows, *kleśas* comprise “wrong intellectual as well as affective attitudes.”

(2) In the TGS enumerations of *kleśas* appear in six passages, among them four times the same enumeration of *rāga*, *dveṣa*, *moha*, *trṣṇā* and *avidyā* (0M.9f.; 1A.9–10; 6A.5–6; 6B.1–2). 6B.4 is reduced to *avidyā* and only in 2B.2–5 we find a different, longer list: “*rāga*, *dveṣa*, *moha*, *māna*, *mada*, *mraṅka*, *krodha*, *vyāpāda*, *irṣyā*, *mātsarya* etc.” (see n. 92 (2)). The first members of the list, namely *rāga* (or *lobha*), *dveṣa* (or *pratigha*) and *moha*, constitute the common group of the three *akuśalamūla*. In *YBhū* 168.12ff. they are subsumed among the group of the three *bandhanas* and the three *upakleśas* which are said to be synonymous terms (*paryāya*) for *kleśas* (*YBhū* 166.24ff). *Trṣṇā* and *avidyā* maintain also a central position among the *kleśas*. *Avidyā* forms the departure point in the *pratītyasamutpāda* and is the basis of the four *viparyāsas*. Also *trṣṇā* is a member of the *pratītyasamutpāda*. Being divided into *kāmatrṣṇā*, *bhavatrṣṇā* and *vibhavatrṣṇā*, *trṣṇā* constitutes the main factor for being born in the saṃsāra. *Ch₁* shows only the first three *kleśas*: *rāga* (貪欲), *dveṣa* (恚) and *moha* (痴). It does not mention that sentient beings are encased, nor does it say anything about the number of the *kleśas*.

⁵⁹ The construction *nyon mongs pa ... gyi sbubs su gyur pa* (0M.10 and similar 0M.12) deserves attention: The phrase *nyon mongs pa ’i sbubs* (*kleśakośa*) should be interpreted as a *karmadhāraya*: “sheaths that are defilements.” The Skt. in 0M.8–11 could have been: **rāga-dveṣa-moha-trṣṇāvidyā-kleśakośa-koṭīśatasahasra-gatān sarvasattvān prāṇabhūtān ... vilokya*. *Gyur pa* could here represent Skt. *-gata* in the sense of “gone to [and thus being in].”

⁶⁰ *Bth* does not mention that the tathāgatas are also endowed with the Tathāgata’s vision. *Ch₁* translates the two sentences above as follows: “In the same way, sons of good [family], I see with my buddha-vision that inside the defilements ... of all living beings is the knowledge, vision and body of a tathāgata sitting cross-legged, dignified and motionless.” *Ch₁* avoids the repeated mentioning of the fact that living beings are encased in defilements (also *Ch₂* avoids this). The address *kulaputrāḥ* that is separating the two sentences in the Tibetan appears in *Ch₁* only at the beginning of the following section. In its contents *Ch₁* differs from the other versions in stating that not living beings themselves, but the tathāgatas within are encased in defilements. This relation between living beings, buddha within and defilements seems to correspond correctly to the analogy of the tathāgatas inside the lotuses (= living beings) hidden by their petals (= defilements). *Ch₂*: “In the very same way, sons of good [family], the Tathāgata, Honourable One and Perfectly Awakened One perceives with the knowledge-radiating vision peculiar to the Buddha, the defilements ... of all sentient beings. [And he perceives that] in the wombs of those sons and daughters of good [family] who have sunk deeply into defilements, there are myriads of buddhas, all like myself. [He perceives with] a tathāgata’s knowledge [and] vision that they all have the nature of the buddha-qualities (佛法體), [the buddhas within] sitting cross-legged, quiet and motionless.” *Ch₂* is not entirely clear, but seems to interpret the last part of the passage as an independent statement. The reading of *Tib*, *Bth* and *Ch₁* which attribute the knowledge and vision of a tathāgata in this last part to the tathāgatas within, is more convincing as it avoids the otherwise repetitive pattern.

⁶¹ The underlying Skt. is probably a *bahuvrīhi* like **sarvakleśakliṣṭeṣu* to a not mentioned *sattveṣu*. With *gyur pa Tib* stresses the perfective aspect of *kliṣṭa*.

⁶² *Ch₁*: 如來藏; *Ch₂*: 如來法藏.

motionless and unaffected by any of the states of existence,⁶³ then says: ‘Those tathāgatas are just like me!’⁶⁴

Sons of good family, in this way a tathāgata’s vision is admirable, [because] with it [he] perceives that all sentient beings contain a tathāgata (*tathāgatagarbha*).⁶⁵

[1 The simile of a tathāgata in a lotus]

[1A]

“Sons of good family, it is like the example of a person endowed with divine vision [who] would [use this] divine vision to look at such unsightly and putrid lotuses, not blooming and not open, and would [owing to his vision] recognize that there are tathāgatas sitting cross-legged in their center, in the calyx of [each] lotus, and [knowing that, he] would then desire to look at the forms of the tathāgatas;⁶⁶ [he would] then peel away and remove the

⁶³ *Srid pa'i 'gro ba*, Skt. *bhavadati*: generally (1) the hells, (2) animals, (3) *pretas* (manes or hungry ghosts), (4) humans and (5) gods; see *AKBh* III.4ab and commentary (= 114.6ff.). In some texts also (6) *asuras* (“demons”) are included.

⁶⁴ Instead of *nga dang 'dra'o* (OM.17f.) *Bth* has: *de bzhin gshegs pa de dang 'dra'o* (also *Ch₁₂*: 如我). The passage in *Ch₁*: “Sons of good [family], though staying in all states of existence (諸趣), all living beings have inside [their] defiled bodies the store of a tathāgata (如來藏) [which is] constant, unspoiled and endowed with [all] qualities—just like me, not different.” A translation for *tathāgatagarbha* appears in the Tibetan versions and in *Ch₂* only in the following sentence that is missing in *Ch₁*. *Ch₂*: ... 如來法藏本無搖動，諸有趣見所不能染。: “... [and he perceives] the store of the qualities of a tathāgata, [which is] originally motionless [and] cannot be spoilt by any state of existence....” A passive construction with 見所 is not common. One would rather expect the sequence 所見. Based on the text as it is, the phrase 諸有趣見所不能染 should be understood as “... cannot be spoilt by wrong views (*dṛṣṭi*) [about/in] any of the states of existence” or (as a *dvandva*) “... cannot be spoilt by any of the states of existence *and* wrong views.”

⁶⁵ The last sentence is missing in *Ch₁*. *Ch₂* approximately corresponds with the second part of the sentence (善男子，如是如來以佛智眼見一切有情如來藏。): “Sons of good [family], in the same way the Tathāgata perceives with [his] vision of buddha-knowledge that all sentient beings are stores of a tathāgata.” The Tibetan text gives rise to certain doubts. The adjective *mdzes pa* (*Bth*: *bzang po*) for Skt. **prāsādika* in order to describe the Tathāgata’s vision is not common at all and does not appear in *Ch₂*. Also the phrase *sems can thams cad* (*sarvasattvāḥ*) without any demonstrative pronoun is surprising. In all other cases of summarizing statements which repeat the before-said in simple words (see 1B.1–3; 1.5; 7.3), the demonstrative pronoun *'di* accompanies “living beings.”

⁶⁶ (1) With 1A the first of the nine similes starts with the introductory formula common to all the similes. In contrast to the chapters before, in 1A a supernatural vision is necessary in order to recognize the tathāgatas in the lotuses. The flowers are described as being closed. These two points form an inconsistency to the chapters before. In OG (last passage) the flowers are said to have opened and there is no remark in the following chapters suggesting that they became closed again. The buddhas within the flowers are described as being seen everywhere. No reference to a supernatural vision is made. For the meaning of these inconsistencies regarding the textual history of the *TGS* see section A 1.4 in part I.

(2) In *Bth* and *Ch₁* the supernatural vision only appears once; *Ch₂* combines its second appearance with the recognizing of the tathāgatas in the flowers. *Ch₁* describes the lotuses as *not yet* blooming (未敷花; 1.1b: 未開敷), and does not speak of the desire to look at the buddhas. Instead, it is said that the person directly sees them. *Ch₂* describes the lotuses vividly as “wrapping and bothering [the tathāgatas]” with their petals (... 諸蓮花葉纏裹，逼迫。). Instead of the tathāgata forms *Ch₂* speaks of the “true essence/true composed body of a buddha” (佛真實體) (see Unger 2000: 114, s.v. *t'i* 體). *Bth* continues here and in the following passage to speak of the “bodies” (*sku* for *kāya*?) of the tathāgatas and omits the *paryāṅka* position (... *bzhugs na ni : de bzhin nyid mthong zhing shes ...* for ... *skyil mo krung bcas shing 'dug par rig*...). I am not sure whether 真實

unsightly, putrid and disgusting lotus petals⁶⁷ in order to thoroughly clean the forms of the tathāgatas.⁶⁸

In the same way, sons of good family, with the vision of a buddha, the Tathāgata also perceives that all sentient beings contain a tathāgata (*tathāgatagarbha*), and [therefore] teaches the Dharma [to them] in order to peel away the sheaths of those sentient beings [encased in such] defilements [as] desire, anger, misguidedness, longing and ignorance.⁶⁹ *And after [those sentient beings] have realized the [Dharma, their] tathāgatas [inside] are established in the perfection [of the tathāgatas].*⁷⁰

[1B]

“Sons of good family, the essential law (*dharmatā*) of the *dharmas* is this: whether or not tathāgatas appear in the world, all these sentient beings at all times contain a tathāgata (*tathāgatagarbha*).⁷¹

in *Ch*₂ and *de bzhin nyid* (**tathatā*) in *Bth* share a common counterpart in the Indian original which has not been transmitted or has been dropped in *Tib*. *De bzhin nyid* could, of course, also render *tathaiva*.

⁶⁷ (1) The verb *'byed pa*, Skt. **bhinatti* (“to split, to break”), reminds one of the simile of the great cloth of the *TUSN* (*Q* 117a5–118b1; *S* 154b4–156a6) cited in *RGVV* 22.10–24.9. This cloth, on which the whole universe is painted, has the size of an atom. When this atom is split, it is said:

... *tat paramāṇurajo bhittvā* ... (*RGVV* 23.12);

... *rdul phra mo 'di¹ kha phye ste* / [¹ *S*: *'di dag kha.*] (*TUSN*: *Q* 118a1; *S* 155b4).

(2) *Ch*₁ only mentions the removal of the (whole) withered flowers (so also in 1.2a) without attributing any other negative characteristics to them (除去萎花). *Ch*₂: ... 應須除去臭穢、惡葉, ...: “... [and] would necessarily remove the putrid, ugly leaves.”

⁶⁸ *Ch*₁ is not expressive of finality: ... 便得顯現: “... [and he] then attains the manifestation [of the tathāgatas].” *Ch*₂: ... 爲令顯於佛形相故。: “... in order to allow the buddha forms to appear.”

⁶⁹ The second half of the sentence and the following passage in *Ch*₁: ... 欲令開敷，爲說經法，除滅煩惱，顯現佛性。: “... [the Buddha] wants them to disclose [their true nature and therefore] teaches the Dharma for [them in the form of] sūtras, destroys [their] defilements and manifests [their] buddha-nature.” In the first part of the passage the supernatural vision is not mentioned. *Ch*₂ more or less agrees with the Tibetan versions. Instead of “to peel away” it has: 除遣 (“to dispel”); the construction with 令 ... 故 to express finality is not common and instead of 令 one would expect 爲.

⁷⁰ The text as it is preserved in *Tib* does not make sense. *Bth* seems to show the better reading (*gang nan tan byed pa ni de bzhin gshegs pa yongsu dag par gnas so*): “[He,] who practices [this Dharma, his] tathāgata [within] is established in purity” or “[He,] who practices [this Dharma] is established in the purity of the tathāgatas.” The difference in the readings *yang dag pa nyid du* (*Tib*), (**samyaktva*), and *yongsu dag par* (*Bth*), **parisuddha* or °*ddhi*, is partly to explain as a graphic variant (*yang dag pa* > *yongs su dag pa*) in the Tibetan. The addition of *nyid* could well be the result of a revision not based on the Indian text. That the reading **parisuddha*°*ddhi* should definitely be considered as the original one, is proved by *Ch*₂ (清淨). The irritating genitive *pa 'i* in *Tib* 1A.11 (*Bth*: *pa ni*) could result from a mistake in the Skt. manuscript used by the translators of *Tib* which read *(*sarvasattvāḥ*) *yat-pratipannās tathāgatāḥ parisuddhau pratiṣṭhitāḥ* instead of ... *tathāgata-parisuddhau* ... The subject of the sentence is also missing in *Ch*₂: 由聞法故，則正修行，即得清淨如來實體。: “Because [sentient beings] listen to the Dharma [they] accordingly practice in the right way and then gain the pure real essence of a tathāgata.” In *Ch*₁ the last sentence is condensed to the statement that (the Tathāgata) manifests the buddha-nature (of living beings): 顯現佛性.

⁷¹ This is one of the two passages of the *TGS* cited word by word in the *RGVV* (73.11–12):

*eṣā kulaputra dharmāṇām dharmatā / utpādād vā tathāgatānām anutpādād vā
sadaivaite sattvās tathāgatagarbhā iti*

The Skt. is in nearly perfect accordance with *Tib*. I was not able to check the Skt. manuscripts in order to verify the vocative singular reading *kulaputra*. The singular *rigs kyi bu* is only found in *P*₂ and *Bth*. Compared to the passage in *Bth* there are several points suggesting that *Bth* is the less

Sons of good family, in view of [this fact and] because [sentient beings] are encased in the disgusting sheaths of defilements, the Tathāgata, the Honorable One and Perfectly Awakened One, teaches the Dharma to bodhisattvas and also leads [them] to put faith in this [revelatory] activity in order to destroy their sheaths of defilements and [thereby] also completely purify the tathāgata-knowledge (*tathāgatajñāna*) [contained within].⁷² When (*yadā*) in this [connection] the bodhisattva-*mahāsattvas* [who] assiduously apply [themselves] (*abhiyujyate*) to these Dharmas have completely become free from all defilements and impurities,⁷³ then (*tadā*) [they] will be

faithful translation: *rigs kyi bu chos rnamis kyi chos nyid de bzhin te : de bzhin gshegs pa byung ngam : de bzhin gshegs pa ma byung yang sems can de dag thams cad ni de bzhin gshegs pa'i snying po'o* .: Concerning *Bth*, at the beginning there is no equivalent for Skt. *eṣā*. Instead, *Bth* seems to have read *evam* (*de bzhin*). Regarding *sadaivaitte sattvās*, *Bth* reads *sems can de dag thams cad* which corresponds to Skt. **sarve te sattvās*. *Ch₁*: 善男子，諸佛法爾，若佛出世，若不出世，一切衆生如來之藏常住不變。：“Sons of good [family], the *dharmatā* (法爾; “essential law”) of all buddhas [is this]: whether or not buddhas appear in the world, [in] all living beings the store of a tathāgata is at all times present without change.” *Ch₂*: 善男子，如來出世，若不出世，法性法界，一切有情如來藏常恒不變。：“Sons of good [family], whether or not the tathāgatas appear in the world, [this is] the *dharmatā* (法性), the *dharmadhātu* (法界) (“essential law”): the store of a tathāgata [in] all sentient beings remains eternally without change.” For *dharmadhātu* as a synonym for *dharmatā* see Schmithausen 1969a: 145ff. The first part of the passage is a well-known formula usually associated with the law of *pratītyasamutpāda* and already attested for the Pāli Canon (for further references and passages in Mahāyāna sutras, see Seyfort Ruegg 1969: 330f.):

jātipaccayā bhikkhave jarāmaṇam ¹ *uppādā vā tathāgatānam anuppādā vā tathāgatānam* ² *ñhitā va sā dhātu dhammaññhitatā dhammaniyāmatā idappaccayatā* ||
¹ edition without *danḍa*; ² edition has //] (*SN* II.25)

The term *dhātu* is in later texts replaced by the term *dharmatā* (see Schmithausen 1969a: 146f.). The *TGS*, however, associates this traditional introduction with the message that all living beings have buddha-nature and thus characterizes this doctrine as most central. See also Zimmermann 1999: 157f. and 164 for what I would call an indirect reference to the formula within the *SP*.

⁷² (1) The passage in *Ch₁*: 但彼衆生煩惱覆故，如來出世，廣爲說法，除滅塵勞，淨一切智。：“But because those living beings are covered by defilements, the Tathāgata appears in the world and extensively teaches the Dharma for [them. He] destroys [their] impurities and purifies [their] knowledge of all [matters].” The statement pertaining to faith is connected with the following passage and translated below. In *Bth* the part concerning faith is not found at all.

(2) I try to render *adhimucyate* (*mos pa*) with “to put faith.” For an extensive discussion of this term see Schmithausen 1982: 408f. where the meanings “intellektuelles Festhalten oder Überzeugtsein ... Gefallenhaben ... Neigung ... Wünschen oder Wollen” are given. The *TGS* uses *mos pa* (**adhimucyate*) in three further passages: 5B.3 ... *chos kyi gter chen po de la mos nas* (5B.3); ... *ngas bstan pa la mos gyur pa* // (5.5a) as well as in the corresponding verse 5.5c. In all cases *mos pa* refers to faith in the teaching. Also the Chinese versions make it hard to believe that *Tib* which speaks of faith in the activity, could be based on the Skt. text. In *Ch₁* *adhimukti* (信樂) clearly refers to the Dharma. *Ch₂*, on the other hand, expresses a different idea: 如來 ... 作如是事，令彼勝解。：“The Tathāgata ... performs such tasks [as to] lead them (= sentient beings) to faith.” *Bth* does not have any correspondence.

⁷³ *Nye ba'i nyon mongs pa*, Skt. *upakleśa*: there is no clear distinction between *kleśa* and *upakleśa* in early Mahāyāna texts (see e.g. *YBhū* 166.24ff.). Also in the *TGS* the mentioning of both, *kleśa* and *upakleśa*, has a purely extending character. In the verse section considerations *metri causa* could have been decisive. Consequently I have chosen the more general translation of “impurities” instead of adopting an *abhidharmic* technical-analytical rendering such as e.g. “side-defilements” or “sub-defilements” (see *AKVy* 493.24ff. (with my own punctuation): *ta upakleśā eveti kleśa-samīpa-rūpāḥ* // *kleśo vā samīpa-varty eṣām iti kleśa-pravṛtṭy-anuvṛtṭer* // *aparipūrṇa-kleśa-lakṣaṇatvāc copakleśāḥ* //).

designated ‘tathāgata, honorable one and perfectly awakened one,’⁷⁴ and [they] will also perform all the tasks of a tathāgata.”⁷⁵

[1C]

Then at that time the Exalted One uttered these verses:

[1.1] “It is as if [there were] a disgusting lotus whose [unsightly] sheath-[like] petals were not opened out, yet [whose] inside [containing a] tathāgata,⁷⁶ were unpolluted [by the petals], and a person with divine vision perceived [this].”⁷⁷

[1.2] “If this [person] peeled away its petals, in the center the body of a victorious one⁷⁸ would appear, and no impurity would then arise any longer [from this] victorious one. He would appear as a victorious one [in] the whole world.”⁷⁹

⁷⁴ *Grangs su 'gro ba*, Skt. *saṃkhyām gacchati/upeti*, has the meaning of “being designated as” as well as “being counted as” (see Schmithausen 1969a: 134, n. 96). *Ch*₂: 得其數.

⁷⁵ The last passage in *Ch*₁: “Sons of good [family], if bodhisattvas have faith and interest in this Dharma and practice with a mind exclusively [dedicated to it], then, attaining liberation, [they] will become perfectly awakened, granting widely the acts of a buddha to the world.” *Ch*₂: “[When these bodhisattvas,] after having gained faith, rigidly stay with the Dharma, [they] will gain liberation from all defilements and impurities. At exactly that time [they] will attain their destiny [as] tathāgata, honourable one and perfectly awakened one in [each of] their worlds. They will [then] be able to perform the buddha-acts of a tathāgata.” In contrast to the Tibetan versions, the Chinese translations both mention the world(s) (世間). The attribute *mahāsattva* appears alone in *Tib*.

⁷⁶ The verse is extensively discussed in A 2.2 of part I.

⁷⁷ In *Ch*₁ the sheaths are not mentioned. Instead of the not opened petals of pāda b, *Ch*₂ speaks of the disgusting lotus “with its womb[-like] petals and stamen” (并其胎葉及鬚藥).

⁷⁸ “Victorious one” is my translation for *rgyal ba*, Skt. *jina*, another epithet of a buddha. As is the case in the *SP*, the term appears exclusively in the verses. *Ch*₁ speaks of the “unhindered leader” (無礙導師, **anāvṛtanāyaka*; see the parallel verse *RGV* I.100: ... *sugataḥ* ... *anāvṛto* ...). *Ch*₂: 如來身 (*tathāgatakāya*).

⁷⁹ (1) The use of the term *upakleśa* here surprises as in the *TGS* it is a typical element of the *upameya*, which describes the situation for living beings. However, it can also be employed in a material sense as the *CPD* documents (s.v. *upa-kkileśa*).

(2) The Skt. on which the Tibetan in 1.2c is based could be ... *na sambhaveyuh* (see *Bth*: ... *'byung ste*). In pāda d the Skt. could have been *sambhavati*. A Tibetan equivalent for this is found in *Bth*: *kun ↓du ↓'byung*. In *Tib*, however, only *'gyur* is found. *Kun tu* appears before, separated from it by some syllables, and has to be integrated differently into the sentence. I assume that an original reading *kun tu 'byung* turned erroneously into *kun tu 'gyur* (both are graphically similar and often *variae lectiones* for each other). Then, in a redactional step that bypassed the Sanskrit, the uncommon *kun tu 'gyur* was separated into *kun tu* and *'gyur*.

(3) The second half of the verse in *Ch*₁: 為斷煩惱故 最勝出世間: “In order to cut away the defilements the Victorious One appears [in] the world.” or “Because the defilements have been cut away the victorious one [in the lotus]...” The second alternative is in accordance with the Tibetan. In the first alternative the Victorious One cannot be in the lotus but manifests himself in the world from another sphere. *Ch*₂: 復不被諸煩惱染 則於世間成正覺: “[The body of the tathāgata] would not anymore become spoilt by defilements and [that tathāgata] would then awake perfectly in the world.”

- [1.3] “In the same way, I also see bodies of victorious ones placed in the midst of all living beings, encased in myriads of defilements [that are] just like the disgusting sheaths of a lotus.”⁸⁰
- [1.4] “[And] because I also desire to remove [the defilements] of those [sentient beings, I] am continually teaching the Dharma to the wise,⁸¹ thinking,
‘May these sentient beings become awakened!’
[And I] purify [their] defilements, so that [they may become] victorious ones.”⁸²
- [1.5] “My buddha-vision is like that [person’s divine vision]: with the [vision of a buddha I] see that *in all these sentient beings the body of a victorious one is established*,⁸³ and in order to purify them [I] preach the Dharma.”⁸⁴

⁸⁰ *Bth* has *snying po* instead of *dkyil* in *Tib*; *Ch*₂: 内. The bodies of the *jinās*: 如來藏 (*Ch*₁); 如來微妙體 (*Ch*₂): “wonderful essence of a tathāgata.” Instead of *koṭīśahasra* (“myriads”): *Ch*₁: 無量; *Ch*₂ does not mention the encasing but speaks of the removing (除) of the defilements. The analogy in d of *Ch*₂ (= c in *Tib*) runs: 可厭惡如萎蓮花: “disgusting just as the withered lotus blossoms.”

⁸¹ *mKhas pa rnams* refers to the bodhisattvas, as becomes evident through its parallel in the prose (1B.5–7). “Wise” does not appear in *Ch*₁.

⁸² In the second half of the verse *Tib* and *Ch*₂ have a thought of the Buddha (佛常思彼諸有情 悉皆願成如來體): “The Buddha continually reflects: ‘All those sentient beings desire to accomplish [their] essence of a tathāgata.’” *Bth* reads *ci ltar* instead of *zhes* and constructs the statement as the consequence of the purifying activity: “... so that (*ci ltar*) these living beings become awakened.” Pādas c and d in *Ch*₁: 普爲說正法 令速成佛道: “[I] widely teach the right Dharma for [them] so that [they] quickly accomplish the path of a buddha.” Pāda d of *Tib* (= c in *Bth*) is missing in *Ch*₂.

⁸³ (1) For the introductory formula in pāda a see the parallel in verse 7.3, pāda a.

(2) The text of *Tib* is dubious. The idea that “all these sentient beings are established in the body of the Victorious One” is known as a later step of philosophical development. So, for example, *RGV* I.27 states that living beings are enshrouded and penetrated by the *dharmakāya*. However, neither the context of the first simile nor the following illustrations of the *TGS* allow for such an understanding as expressed in *Tib*. This becomes even more plausible if we compare the two pādas with *Bth*, which seems to have preserved the meaning as intended in the Skt. original:

nga 'i' sems can 'di dag kun mthong ba //
de ru rgyal ba 'i sku yang rab tu gnas //

[With] my [supernatural vision I]¹ perceive all these sentient beings: inside them the body of a victorious one is established (**pratiṣṭhita*).

[¹ originally probably *nga yis* (“I [perceive] ...”) which became *nga yi>nga 'i*; *yis* would constitute the ninth syllable for the correct meter.]

My translation above, in italics, is based on this. A possible alternative to the suggested translation would be: “... that all these sentient beings are established as a body of a victorious one (i.e., as a body containing a buddha).” See Takasaki 1981: 16: ... これらの衆生がことごとく、勝利者の身として確立するのを.... *Ch*₁: 一切衆生身 佛藏安隱住: “... that [in] the body of all living beings the store of the buddha is established, quiet [and] hidden.” In *Ch*₂, the same statement is abbreviated to only a single pāda (一切有情住佛位): “... [that] all sentient beings are established [in] the position of a buddha.”

⁸⁴ The last pāda in *Ch*₁: 說法令開現: “[I] teach the Dharma so that [the store of a buddha within] is disclosed and manifested.” The last two pādas of *Ch*₂: “Because of this [establishment of all sentient beings in the position of a buddha] I continuously teach the wonderful Dharma so that [these sentient beings] may attain the three bodies endowed with buddha-knowledge.”

[2 The simile of honey shielded by bees]

[2A]

“Sons of good family, again it is as if there were, for example, a round honeycomb hanging from the branch of a tree, shielded on all sides⁸⁵ by a hundred thousand bees and filled with honey. And a person desiring honey, [and knowing of the honey within,] would then with skill [in the application of appropriate] means⁸⁶ expel all the living beings, the bees,⁸⁷ and then use the honey [in the way] honey is to be used.⁸⁸

In the same way, sons of good family, all sentient beings without exception are like a honeycomb: with a tathāgata’s mental vision⁸⁹ [I] realize that [their] buddhahood within is ‘shielded on all sides’ by myriads of defilements and impurities.⁹⁰

⁸⁵ *Kun tu srung ba* for **āraṅṣati* or **saṃraṅṣati*, which describes the activity of the bees in the *TGS*, has an overall positive connotation. In opposite to this, *RGV* I.102–104, taking up this illustration, shows *upagūḍha*, *āvṛti* and *āvṛta*. The choice of terminology in the *RGV* could be influenced by its convenient applicability to the second level of the simile, designating the encasing function of the *kleśas*. In this sense the choice of the terminology is more standardized, whereas the *TGS* still uses the vocabulary relating to the function of the bees, namely the protection of the collected honey. The *TGS* thereby vividly stresses the risks involved for the honey robber.

⁸⁶ *Thabs (la) mkhas pa*, Skt. *upāyakaśālyā*, in the soteriological sphere designates the ability of buddhas and bodhisattvas to know and to apply stratagems appropriate to the character of living beings and their situation, in order to lead them to awakening. Here, the choice of this characteristic term on the first level of the illustration already paves the way for the description of the Buddha’s activity, as is stated explicitly in 2.3d. *Ch*₁: 巧智方便; *Ch*₂: 巧方便.

⁸⁷ The term *srog chags kyi rnam pa bung ba* (*Bth*: *bung*¹ *ba srog chagsu gyur pa* [¹ for *bus*]), Skt. **kṣudraprāṇakajāta*, appears partly in the corresponding section *RGV* (61.3): *kṣudraprāṇaka- ...*; *srog chags sbrang ma ...* (*RGV*₁ 119.12): “minute living beings.” The Tibetan has translated *kṣudra* with *sbrang ma* (in the *TGS*: *bung ba*) and rendered *jāta* with *rnam pa* (*Tib*) and *su gyur pa* (*Bth*). However, the more common meaning of *-jāta* is “all (different kinds of)” (cf. n. 56). *Ch*₁₂ translate only 蜂.

⁸⁸ (1) Instead of a round honeycomb hanging from a branch, *Ch*₁ speaks of pure honey (淳蜜) in a tall tree (在巖樹中) guarded by innumerable (無數) bees. It is not said in *Ch*₁ that the person desires honey (but cp. *RGV* I.102b: *puruṣas tadarthī* and I.104: *naro madhvarthī*). According to *Ch*₂ the honeycomb hangs from a big tree. It is not explicitly stated that the comb is filled with honey.

(2) The last part of the sentence in *Ch*₁: ... 隨意食用, 惠及遠近。: “... [and] would, just as [he] likes, use [it] as food, [and its] benefit would reach [beings] far and near.” (For 隨意 cf. the parallel verse *RGV* I.104.b: *yathākāmatah*).

⁸⁹ My translation of “mental vision” for *jñānadarśana*, *ye shes mthong ba*, departs from a grammatical analysis as a *karmadhāraya*: “vision, i.e., knowledge” (in this sense also e.g. *Vin* III 91). Citing this illustration, the *RGV* is operating with *sarvajñacakṣus* instead of *tathāgatajñānadarśana* (*RGV* I.103a); *Ch*₁: 佛眼.

⁹⁰ *Rig go* in 2A.8 could also refer back to the very beginning of the sentence (including *rigs kyi bu ...*) and thus reign the complete sentence. The position of the agent *de bzhin gshegs pa’i ye shes mthong bas* after the object in *Tib* is unusual and could be based on the Skt. text, as the concerned part appears also in this position in *Ch*₁₂ (but not in *Bth!*). *Ch*₁: “In the same way, sons of good [family, in] all living beings there is the store of a tathāgata just as pure honey is in a tall tree. [They] are covered by all defilements just as this honey is shielded by a multitude of bees. With [my] buddha-vision I see this in accordance with reality.” *Ch*₂: “In the very same way, sons of good [family], all sentient beings are like a honeycomb: encased and shielded by myriads of defilements and impurities. When with [my] tathāgata’s mental vision [I] had been able to comprehend this [fact, I] achieved perfect awakening.” or “... this [fact], then [they will be able] to achieve...” The last part could also be understood generically as “When ... [one] has been able to comprehend this [fact], then [one] will...” Instead of “buddhahood” in *Tib* and *Bth*, *Ch*₁ shows 如來藏. In *Ch*₂ no equivalent exists.

Sons of good family, just as a skillful person by [his] knowledge realizes that there is honey inside a honeycomb shielded on all sides by myriads of bees, in the same way [I] realize with [my] tathāgata’s mental vision that buddhahood is without exception ‘shielded on all sides’ in all sentient beings by myriads of defilements and impurities.”⁹¹

[2B]

“And, sons of good family, just like the [person who] removed the bees, also the Tathāgata, with skill in [the application of appropriate] means (*upāyakuśala*), removes sentient beings’ defilements and impurities [from their buddhahood] within, [such as] desire (*rāga*), anger (*dveṣa*), misguidedness (*moha*), pride (*māna*), insolence (*mada*), jealous disparagement (*mraṅka*), rage (*krodha*), malice (*vyāpāda*), envy (*īrṣyā*), avarice (*mātsarya*), and so on.⁹² [He] then teaches the Dharma in such a way so that those sentient beings will not again become polluted and harmed by the defilements and impurities.”⁹³

⁹¹ This last passage does not give any new information and is missing in *Ch₁*. The fact that the wording is widely identical with the passage right above could mean that it resulted from a redactionally amplified dittography or that it is a later interpolation. Also in *Bth* a part of the passage is missing. This, however, is probably due to a scribe omitting the part between *bzhin du* / (2A.10) and *thabs la* (2B.1). The passage is also found in *Ch₂*, with a syntax which probably imitates the Skt. word order: 如是一切有情以如來智見知己，成佛於彼，為俱胝百千煩惱、隨煩惱之所遮覆：“..., in the same way, [as for] all sentient beings, when I recognized [it]/understood [them] with [my] tathāgata’s mental vision, [I realized that their disposition of] becoming a buddha (成佛) inside them is covered by myriads of defilements and impurities.”

⁹² (1) *sBrang rtsi byed pa* (*Bth*) instead of *bung ba* in 2B.1 is also found in the corresponding verse I.104b of the *RGV: madhukarān*.

(2) For *'chab pa*, Skt. *mraṅka*, see *BHSD* s.v.; *Ch₂*: 覆. Nearly identical enumerations are found in e.g. *Lal* 52.12ff., 411.15ff. and *Śikṣ* 198.8f. *Bth* mentions *dregs pa* [emended for *drag pa*] (usually Skt. *darpa*) instead of *rgyags pa* (*mada*) and *ngan sems* (usually *duṣṭacitta*) instead of *phrag dog* (*īrṣyā*). Probably in order to match the high number of bees the list of *kleśas* has been extended.

(3) In *Ch₁* 2B is reduced to: “With skill [in the application of appropriate] means [I] teach the Dharma according [to the situation] (隨應, **anukūla*), destroy and remove the defilements [of living beings and] disclose [their] mental vision of a buddha [so that they will] widely perform the tasks of a buddha for the world.” As is the parallel in *Ch₁* 2.4, it is not clear if the performers of the acts of a buddha are intended to be living beings or the Buddha himself. If, in contrast to the Tibetan (*Tib* has *'byed* and not *mdzad!*), the second is the case, the final part in *Ch₁* should be understood as “... disclose [their] mental vision of a buddha. [Therefore I] widely...”

⁹³ Literally: “... so that among those sentient beings there will not again appear [those] polluted by the defilements and impurities and [so that they are not again] harmed.” It is not clear how to understand the construction *sems can de dag la ... nyon mongs pa can du mi 'gyur...* That *sems can de dag la* reflects a genitive construction in the Skt. text is only possible if we assume that the Tibetan translators have erroneously separated it from **dharmam deśayati* (*chos ston to*). However, there is no evidence for that in the other translations. If, on the other hand, we understand *la* in a partitive sense, the whole passage seems more plausible, as it is probably thought that only a part of the whole number of living beings is endangered of becoming polluted again. The particle *la* does not appear in *Bth* (see below). As is the case in the compound *de bzhin gshegs pa 'i snying po* above, where in some versions of *Tib* the particle *can* has been affixed in order to differentiate between, on the one hand, living beings themselves as the essence of a tathāgata (without *can* this would be the most natural way of understanding) and, on the other hand, the essence of a tathāgata as something possessed by living beings, the appearance of the particle *can* in *nyon mongs pa can* may be caused by similar considerations, namely in order to differentiate clearly between the defilements and living beings. The use of *can* is not found in *Bth*. The passage in *Bth* can be understood in two ways: ... *nye bar nyon mongs pa med par bya ba 'i*

[When their] tathāgata’s mental vision has become purified, [they] will perform the tasks of a tathāgata in the world. Sons of good family, this is how I see all sentient beings with my completely pure vision of a tathāgata.”⁹⁴

[2C]

Then at that time the Exalted One uttered these verses:

[2.1] “It is as if there were a honeycomb here, shielded on all sides and hidden by bees, [but] a person desiring honey would perceive the [honey within] and expel the bees.”⁹⁵

phyir : *de bzhin du chos 'chad do : ci ltar ci lta bu yang sems can de dag ... nye bar nyon mong*¹
par mi 'gyur ba dang : gdungs par mi 'gyur ba dang : de bzhin du de bzhin gshegs pa'i yeshes
mthong ba de rnam par sbyangs te : ... byed do : (a) “In order to remove the impurities ... [the Tathāgata] teaches the Dharma in such a way that those sentient beings do not again become polluted and harmed ... and, after the[ir] tathāgata’s mental vision has become purified in such a way, [they] perform...,” or (b) “In order to remove the impurities ... [the Tathāgata] teaches the Dharma accordingly. In such way that those sentient beings do not again become polluted and harmed ... [ignore *dang!*] in that way [the Tathāgata] purifies the[ir] tathāgata’s mental vision and performs...”

Analysis: a. Contrary to *Tib* but with *Ch₂*, *Bth* considers the removal of the impurities as the intention of the teaching. The different understanding could result from a mistake in the Skt. msnuscript which instead of **kleśānām vināśāya* could have read **kleśān vināśya* (so *Tib*). The reading in *Ch₂* and *Bth* seems much more plausible than the temporal sequence of removing the *kleśas* and *then* teaching the Dharma as suggested by *Tib*. Also in the parallel verse 2.3 of *Tib* we find the relation of finality as in the prose of *Ch₂* and *Bth*. b. The position of *chos 'chad do* between the description of the removal of the *kleśas* and the mention that living beings will not again be harmed is parallel to *Ch₂* (and contrary to *Tib*). *Bth* and *Ch₂* probably reflect the Skt. syntax with the verb in the middle of the sentence. *Tib*, on the other hand, has arranged the sentence with the *tathā ...* passage at the end. The original could have been: *... *tathā (tathā) dharmam deśayati yathā te sattvā na bhūyas taiḥ kleśopakleśair upakliśyante na (ca)*.... A similar syntactic structure is found in the *RGVV* (50.2; citation from the *Sāgaramatipariṣcchā(sūtra)*): *te 'smābhis tathā pratyavekṣitavyā yathā na bhūyaḥ śliṣyeyuḥ* / (= *RGVV*, 97.7: *de ni kho bos cī nas kyang 'brel bar mi 'gyur ba de ltar so sor brtag par bya'o* /) “Those [*kleśas*] we have to consider thoroughly so that [they] might not again enclose [living beings].” The particle *yang* for Skt. *punar* or *bhūyaḥ* in 2B.5 has its counterpart in *Ch₂* with 復.

This passage and the following in *Ch₂*: “In order to instruct sentient beings [and/how] to dispel the impurities..., [in the same position] as the person harming the bees, by the power of skill in the application of appropriate means (*upāyakauśalya*), the Tathāgata teaches the Dharma in such a way so that sentient beings are not polluted by defilements, [that] there is never again annoyance [for them] and [that they] are not enclosed¹ [again by defilements]. Sons of good [family], how [should] I with [my] tathāgata’s mental vision perform the acts of a Buddha in all worlds [for] these sentient beings in order to purify [them]?” [¹ 附近 could represent a translation of a form of the root *śliṣ*; see *RGV* 103.4cd: ... *aśleṣam ... ādadhāti* //]

The text of *Ch₂* in this passage is not very clear. The corresponding verse 2.4 of *Ch₂* relates the whole question to living beings asking how *they* could become buddhas to perform buddha-acts. Apart from this, Amoghavajra seems to have positioned *tathāgatajñānadarsana* (如來智見) in a way different from *Tib*. The interrogative 云何 which is also found in the corresponding verse 2.4 of *Ch₂* could be based on the reading *kena* instead of *yena (ji ltar)*.

⁹⁴ *Ch₂* describes sentient beings as pure (見諸有情如是清淨). Again, this final sentence which somehow tries to essentialize the simile is not found in *Ch₁*. Since it is also not reflected in the verses, it should be regarded as a later interpolation.

⁹⁵ *Ch₁* keeps to its own prose and accordingly speaks of “honey in a tall tree”; the bees are innumerable (無量) and the desire for honey is not mentioned.

- [2.2] “Also here⁹⁶ in the same way, all sentient beings [in] the triple states of existence⁹⁷ are like the honeycomb. The many myriads of defilements are [like] the [bees, yet I] see that inside the defilements there exists a tathāgata.”⁹⁸
- [2.3] “Also, in order to clean [this] buddha,⁹⁹ I remove the defilements, even as [the person desiring honey] expels the bees. [Using appropriate] means, [I] teach here *dharmas* so that myriads of defilements will be eradicated.”¹⁰⁰
- [2.4] “[I do this] in order to induce those [sentient beings], after becoming tathāgatas, to continually perform the tasks [of a tathāgata] throughout the world, and with readiness in speech¹⁰¹ to teach the Dharma, [which is] like a pot of honey from bees.”¹⁰²

⁹⁶ *Dir*, Skt. *iha* or *atra*, in this case designates the non-fictive level of the simile, i.e., the world of saṃsāra.

⁹⁷ *Srid pa gsum*, Skt. *tribhava* comprise (1) *kāma-*, (2) *rūpa-* and (3) *arūpyadhātu* (see e.g. *AKBh* 111.2).

⁹⁸ Logically the analogy should include the verb *mt hong*: “In the same way [as the person perceived the honey, I] see that....” Such a translation is made impossible in *Tib* due to the particle *do* at the end of pāda b. However, neither *Bth* nor *Ch*₂ support the reading suggested by *Tib*. The text of *Tib* could be improved by altering *do* into *de*. In *Ch*₂ no particle of comparison appears to take up the first half of the analogy in verse 2.1. Instead, the applicability of the analogy between sentient beings and the honeycomb is intensified by adding 無有異: “without difference.” The verse in *Ch*₁: “The store of a tathāgata [in] living beings is like that honey [in] a tall tree: [evil] propensities and impurities encase [this store] just as the multitude of bees shields the honey.”

⁹⁹ I translate *sangs rgyas* in 2.3a as the object of the purifying process. This understanding is parallel to the prose in 2A.6 and 2A.11 where *sangs rgyas* appears as *sangs rgyas nyid* (for the same abbreviation in verse and prose cf. *MSA* IX.22 and *MSABh* 36.21 and 22). Taking *sangs rgyas* to be the subject of the sentence would result in the formulation “I, the Buddha, remove....” *Ch*₂ seems to support this understanding (我佛常爲淨除故); see also *SP* XIII.51: *tathaiva buddho ahu dharmarājā*....

¹⁰⁰ (1) *Bth*, *Ch*₁ and *Ch*₂ confirm that *nyon mongs bye ba* has to be taken as object of the verb *gnod* in 2.3c. Translating *gnod pa*, reigned by the agent *nyon mongs pa* in 2B.7, I decided for its meaning in the Tibetan “to harm,” whereas here the meaning of its possible Skt. original **(upa- /vi-) hanti*, “to eradicate,” is stressed.

(2) *Ch*₁: “[Using appropriate] means I teach the perfect Dharma for all living beings. [I] destroy and remove [their] defilements [which are like the] bees [and] disclose the store of a tathāgata [within them].”

¹⁰¹ For *spobs*, Skt. *pratibhāna*, in the Pāli canon and early Mahāyāna sūtras see McQueen 1981 and 1982. In the context of the *TGS*, *pratibhāna* appears as a quality attributed only to buddhas. “Readiness in speech” indicates the spontaneous and transcendently inspired correct teaching of the Dharma in order to lead other living beings to buddhahood.

¹⁰² (1) An analogy between the preacher of the sweet Dharma and a honey-giving bee is found in *Udr*₁ 11.25ff. For the Dharma compared with sweet honey see *Av-s* 187.6ff., 242.11ff., 249.15ff. *Tib* allows also the understanding of *chos ston* in pāda d as “teacher of the Dharma,” who would thus become the point of reference for the analogy with the honey pot. However, this possibility is excluded by *Bth* where *chos* and *bshad* (for *ston*) are separated by *kyang*.

(2) There are essentially two ways of interpreting the text of *Tib*. The one suggested in my translation takes *bya* in 2.4d as expressing the inducing activity of the Buddha. Consequently *ji ltar* (for *yathā* or *yena*) in a and c grammatically depend on *bya*. Choosing the second way of reading, one would have to understand the construction *ji ltar ... phyir ro* as an expression indicating that a result is aimed at (For the usage of *yathā* in such a way see *Speijer* § 471). In that case *bya* would just indicate the aspect of potentiality and both *ji ltars* would be governed by *ston* in 2.3d: “[I teach the Dharma] in order that [sentient beings] ... might perform....” I have no material to show that such a construction is common in Tibetan translations. Nothing parallel to *bya phyir ro* appears in *Bth*. (Should we assume a change in *Bth* 2.4d from ... *bshad phyir ro* to ... *bshad par ro*?) Another interesting way to understand the construction in 2.4 is found in Takasaki

[3 The simile of kernels enclosed by husks]

[3A]

“Sons of good family, again it is like the example of winter rice¹⁰³, barley, millet or monsoon rice¹⁰⁴ [whose] kernel (*sāra*) is shielded all around by a husk (*tuṣa*): as long as the [kernel] has not come out of its husk, [it can]not serve the function of solid, soft and delicious food.¹⁰⁵ But, sons of good family, [it can serve this function very well once] some men or women, desiring that [these grains serve their] function as food and drink in hard, soft or other [forms],¹⁰⁵ after having it reaped and threshed, remove the [coarse] sheath of the husk and the [fine] outer skin.”¹⁰⁶

1981: 18 (from pāda 2.3c on): 何ゆえに ... 諸法を説くのか。[2.4] 彼らが如来となった暁に、... 法を説くべきだからである。: “Why do [I] teach the *dharmas*? [2.4] Because when they (= living beings) finally have become tathāgatas, [they] are expected to teach the Dharma.” However, this alternative does not take into consideration *ji ltar* in 2.4 a and c.

Parallel to the prose *Ch*₂ has the interrogative 云何. The particle of comparison 猶如 in c could represent a misunderstood *yathā*. *Ch*₂: “How may [sentient beings] awake [so that they can] perform buddha-acts, [so that they can be] continually like honey pots in the world just as if [they] would teach [with] readiness in speech the excellent honey, [and] so that [they] would verify (=realize) the pure Dharma body of a tathāgata?” *Ch*₁: “Endowed with unhindered readiness in speech [I] preach the Dharma of the sweet dew so that [living beings] attain perfect awakening everywhere. [On account of (my)] great compassion [I/they then] save living beings.”

¹⁰³ For (*bras*) *sa lu*, Skt. *sāli*: “winter rice,” see Vogel 1972 and Achaya 1994: 185, 279. Winter rice is thought to be an exquisite cereal (see Prakash 1987: 96) and might therefore be mentioned first in *Tib*. Kumar 1988: 27ff. gives numerous examples in Indian Buddhist literature which show the important role of rice. Instead of *bras sa lu*, *Bth* reads *so pa* which should be emended to *so ba*, a kind of barley.

¹⁰⁴ For *bru*, Skt. *vrihi*: “monsoon rice,” see Vogel 1972 and Achaya 1994: 283. The four enumerated cereals are part of the seven *pubbaṅga* (“primary foods”), which are commonly mentioned in Pāli literature (*sāli*, *vīhi*, *yava*, *godhūma*, *kaṅgu*, *varaka*, *kudrūsaka*) (see Vogel 1972). *Ch*₂ in the prose: 稻、麥、粟、豆: “Rice, wheat, millet [and] beans”; in the verse: 譬如稻穀與粟床 大小麥等及於豆: “Rice, millet, barley, wheat, other [cereals] and even beans.”

¹⁰⁵ (1) For *bza' ba dang bca' ba dang myang ba* see ...-*khādyabhojyānmapāna*-... in *SP* 339.3 (= *Q* 146alf.: ... *bza' ba dang bca' ba dang zas dang skom dang* ...); Pā. *annapāna-khādaniya*: “boiled rice, drink and solid food” (*CPD* s.v. *anna-pāna*); *BHSD* (s.v. *āsvādaniya*, *khādaniya*, *bhojaniya*) mentions the combination of *khādaniya* (= *khādya*, “solid food”) with *bhojaniya* (“soft food”) and also the compound *khādya-bhojya-svādaniya* (s.v. *svādaniya*); also *ASP* 249.13f.: *khādaniyam bhojaniyam svādaniyam ca* (Tib. according to *Derge*: *bza' ba dang bca' ba dang myang ba*) and *MVu* I.38.7f.: *khādaniya-bhojaniya-āsvādaniyena*. The Tibetan of the *TGS* corresponds to the latter two passages. A classification of food into the four categories *khādaniya*, *bhojaniya*, *pāna*, *svādaniya* is found in Buddhist and Jainist texts according to Prakash 1987: 125f. *Ch*₂ simply has 不堪食用: “... is not fit to be eaten.”

(2) *bZa' ba dang / bca' ba la sogs pa zas skom* in *Tib* 3A.4f. could be a translation of the compound found in *SP* 339.3 (mentioned in (1)) with the addition *la sogs pa*. *Bth* is obviously based on another Skt. wording: *bca' ba dang* : *bzod¹ pa dang* : *btung bar* [¹ in the passage above: *bzang ba*]. *Ch*₂: 求食之人: “people, [who] want to eat.”

¹⁰⁶ (1) The Skt. on which *brngas shing brdungs te* is based is probably two absolutes of the roots *lū* and *mṛd* (for *rdung* as an equivalent of *mardana* (to be emended from *mardana*) see *DTS*, folio 89b). Pairs of the roots *lū* and *mṛd* in the context of proceeding grain can be found in *Jā* I.215: ... *lāyivā maddivā* ...; *Vin* II.180: ... *lavāpetvā* ... *maddāpetvā*; *Mil* 360: ... *lavana-maddanena bahudhaññako*.... These and other examples from Jaina sources are quoted in Balbir 1996: 334ff. The reaping is not mentioned in the Chinese. Instead of reaping *Bth* reads *phyir*, which probably should be emended to *phyar*, the perfect form of *'phyar ba* (*Jā*: “... to lift up the grain in a shovel, hence: *to fan, to sift, to winnow*...”). *Ch*₂: ... 以其杵臼舂去其糠，而充於食。: “... threshing with their pestles [in the] mortars [they] remove their (= the grains’) husks so that [the grains] become eatable.”

[3B]

“Sons of good family, in the same way [that people are aware of the precious kernel within the husk, so] too the Tathāgata¹⁰⁷ perceives with [his] tathāgata-vision that tathāgatahood, buddhahood, *svayāmbhūtvā*¹⁰⁸ — wrapped in the skin of the sheaths of defilements—is [always] present in every sentient being.¹⁰⁹ Sons of good family, the Tathāgata also removes the skin of the sheaths of defilements, purifies the tathāgatahood in them and teaches the Dharma to sentient beings, thinking:

‘How [can] these sentient beings become free from all the skins of the sheaths of defilements [so that they] will be designated in the world as ‘tathāgata, honorable one and perfectly awakened one’?’¹¹⁰

[3C]

Then at that time the Exalted One uttered these verses:

[3.1] “[It is] like monsoon rice or winter rice, or [like] millet or barley, [which,] as long as they are in the husk, [can]not serve [their] function.”¹¹¹

(2) 3A in *Ch*₁: “[It is] as if a poor, stupid [man] would disdain nonglutinous rice [and] millet [as long as it were] not separated from [its] husks, and would regard it as something to be thrown away. [But] as soon as, after removing [the husk, the kernel] has been purified, [this same grain] continually is of imperial use.” The character 御 should here have the same meaning as is expressed by 王 in the parallel verse 3.2 of *Ch*₁: “imperial.”

¹⁰⁷ Instead of “Tathāgata”: 我 (*Ch*₁); 如來、應供、正遍知 (*Ch*₂); *Bth* is without subject.

¹⁰⁸ *Rang byung nyid*, Skt. *svayāmbhūtvā*, is here used as a synonym for buddhahood. The adjective *svayāmbhū* counts as an epithet of the Buddha as well as of the central divinities of Hinduism: Brahman, Śiva and Viṣṇu. Originally referring to the myth of the cosmogonic egg out of which Brahman is born meaning “arisen out of himself” (Hacker 1978: 490f.), in the case of the Buddha, *svayāmbhū* should be understood as “become [awakened] by his own [power].” The enumeration is a particularity of the two Tibetan translations. *Ch*₁ reads only 如來無量知見, whereas *Ch*₂ is restricted to 如來體. Cf. the corresponding verse *RGV* I.106: ... *sattveṣv api kleśamalopasrṣtam ... jīnatvam* /. For a similar enumeration see e.g. *ASP*_{UW} 570.2f.; 16f.; (571.13ff.): *tathāgatvatvaṃ buddhatvaṃ svayāmbhūtvāṃ sarvajñatvaṃ*.

¹⁰⁹ After this passage *Ch*₂ has the following insertion which could be a very free rendering of the terms left out immediately before: 若能悟解，則成正覺，堅固安住自然之智。A possible translation could be: “If [they] are able to understand [this fact, namely their innate buddha-nature, they] will become perfectly awakened [ones], settled firmly [and] peacefully in spontaneous knowledge.”

¹¹⁰ The Tibetan connects the three syntactical units of the sentence with *dang*: ... *bsal ba dang* / ... *sbyang ba dang* / ... *ston to*. *Bth* replaces the *first dang* by *phyir*. *sNyam nas* for *iti* (*kṛtvā*) in 3B.8 appears in *Bth* as *phyir* (for *phyir* rendering *iti* cf. *AK* s.v. *iti*). As also the Chinese versions show a construction of finality, we should assume that this was the original structure of the sentence. Replacing the second *dang* in *Tib* with *phyir*, the future form of the verb *sbyang*, in the present construction impossible to explain, would be justified. Similar confusion in the structure of the text of *Tib* occur in verses 3.3 and 3.4. *Ch*₁ drops the appellation at the beginning of the passage and then runs: “Therefore, with [appropriate] means [I] teach the Dharma according [to circumstances] (如應, **yathāyogam*), so that [living beings] remove [their] defilements, purify the knowledge of all [matters] and become perfectly awakened in all worlds.” *Ch*₂: “Sons of good [family], that store of a tathāgata resides amidst all defilements. The Tathāgata, for the sake of [making] those living beings remove the skin of defilements, so that they will be purified and become buddhas, teaches the Dharma for [them], continually thinking: ‘When [should I teach them the Dharma so that] sentient beings strip off all skins of the sheaths of defilements [and] become tathāgatas appearing in the world?’” The temporal interrogative (*kadā* instead of *katham*?) is also found in 3.4 of *Ch*₂. Since there it is combined with 速 in the same pāda, the question must be interpreted as in my translation above.

- [3.2] “[But] having been pounded [and their] husks having been removed, they [can] serve all [their] various functions. [However,] the kernels in the husks [can]not serve [any] function for sentient beings.”¹¹²
- [3.3] “In the same way [that people are aware of the precious kernel within the husk,] I see that the ground of buddha[hood]¹¹³ of] all sentient beings is covered by defilements. And then I teach the Dharma in order to purify them and let [them] attain buddha[hood] quickly.”¹¹⁴
- [3.4] “In order that [they] may quickly become victorious ones, [I] teach the Dharma so that, like mine, [their] true nature (*dharmatā*), which, [though] wrapped in hundreds of defilements, is in all sentient beings, becomes purified [in] all [of them].”¹¹⁵

¹¹¹ *Ch₁* (parallel to its prose): “[It is] as if some poor person would still disdain all nonglutenous rice [and] millet [whose] husks have not yet been removed and would regard it as something to be thrown away.”

¹¹² In *Bth* the pādas comprise only seven syllables. The second half of the verse shows a separate understanding: *de dag snying po phub mar ldan : bsal nas sems can don kyang byed* : [the position of *de dag* may be determined by the syntax of the Skt.]: “After the kernels with the husks have been cleaned, [they] bring about benefit [for] sentient beings.” Pāda c and d of both Tibetan versions seem redundant as they do not add any new information compared to the first two pādas. *Ch₁*: “Though [from] outside it looks as if without use, the kernel within [remains] undamaged. [As soon as] the husk is removed [this same grain] functions as food [for] a king.” In the light of two emendations, the second two pādas of *Ch₂* show similarity to the statement that the kernel remains undamaged in *Ch₁*: 精實處糠而不壞 不壞有情爲作利: “The kernel is placed [in] the husk and [remains] undamaged. [This] undamaged [kernel has the function of] bringing about benefit [for] living beings.” The idea of an undamaged kernel appears in both Chinese versions and constitutes a new aspect in 3.2 missing in the Tibetan. It may have been part of the original Skt. text but was, however, not rendered (or misunderstood?) by the Tibetan translators.

¹¹³ The use of the term *sangs rgyas sa*, Skt. *buddhabhūmi*, might be inspired by the agricultural context of the illustration (*Ch₁*: 佛藏; *Ch₂*: 如來地).

¹¹⁴ In the second half of the verse *Tib* differs from all other versions because the construction of finality with *phyir* includes both statements, namely the purifying activity along with the attainment of buddhahood. In all the other three translations the attainment of buddhahood appears separated in pāda d as the consequence (*Ch₁*: 令 ...) of the teaching or as a wishful exclamation (*Ch₂*: 願令 ...; *Bth* is ambiguous). The translators or revisers decided to position the second half of former pāda c (*bya phyir chos ston*), where it is still found in *Bth*, to the end of the verse (in correspondence with basic rules of Tibetan grammar). Thus the statement referring to the attainment of buddhahood became dragged into the constructional frame of the motive. Instead of “buddha[hood],” in pāda d, *Ch₁* employs again 一切智; *Ch₂*: 菩提.

¹¹⁵ (1) Instead of *dharmatā*: 如來性 (*Ch₁*); *Ch₂* 有法.

(2) Just as in verse 3.3, also here the last two pādas of *Tib* show a different structure. *Bth* and *Ch₂* (for *Ch₁* see below) present the last pāda that living beings will become *jinās* (*Ch₂*: 佛身) as the thought of the Tathāgata, parallel to the prose. In *Tib*, again, *thams cad ji lta (bu)r*, originally part of the question as found in the parallel prose section, has been exchanged with *bya phyir chos ston (to)*. As the result of this process *thams cad* became impossible to construe with the rest of pāda c. *Ch₂*, parallel to its prose, formulates a question with the interrogative 何時 different from the Tibetan (*Bth*: *ci nas*) (see above). Also in the case of this verse, *Tib* definitely is a revised text. The original position of the question is in the last pāda just as found in *Bth*: “How (*ci nas*) may [they] all quickly become victorious ones?”

(3) The verse in *Ch₁*: “Just as my tathāgata-nature, so also are living beings. [I] disclose [this nature of living beings and] induce [its] purification [so that they] quickly attain the supreme awakening (無上道).”

¹¹⁶ (1) For “narrow path” see *Tshig mdzod* (s.v. *gseb lam*): *lam chung ngam lam gu dog po l*. *Ch₂* has: ... 或有丈夫，懷挾金磚，於傍而過，忽然悞落墜于穢中....: “... somebody carrying a

[4 The simile of a gold nugget in excrement]

[4A]

“Sons of good family, again it is like the example of a round nugget (*piṇḍa*) of gold [belonging to] someone (*puruṣāntara*) [who] had walked [along] a narrow path,¹¹⁶ [and whose nugget] had fallen into a place of decaying substances and filth, [a place] full of putrid excrement. In that place of decaying substances and filth full of putrid excrement, the [gold nugget], having been ‘overpowered’ by various impure substances,¹¹⁷ would have become invisible,¹¹⁸ [and would have remained] there for ten, twenty, thirty, forty, fifty, a hundred or a thousand years,¹¹⁹ [but it would, though surrounded] by impure substances, [never be affected by them, owing to] its imperishable nature (*avināśadharmī*). [Because of the covering of impure substances, however, it could] not be of use to any sentient being.”¹²⁰

gold nugget would pass by the side [of the place of excrement when this gold nugget] would by inadvertence suddenly fall down into filth...”

(2) *Bth*: ... *yongsu dag pa'i lam de'i dbusu* ... should be emended to ... *yongsu gang ba'i lam de'i dbusu* ... (see line 4). The person, according to *Bth*, is walking in the middle of the path. However, this text part of *Bth* is grammatically impossible to construe. Instead of the “place of decaying substances and filth” (*ru pa dang nyal nyil gyi gnas*) *Bth* mentions a pit (but in 4A.4 a heap: *phung*) of “decaying filth” (*ru ba'i lud kyī khung*). See *KP* §49: ... *saṃkarakūṭam* ... (*phung* could render *kūṭa*); cf. *SP*₁ s.v. *saṃkāradhāna*: *phung po* for *dhāna*. *Bth* is confirmed by *Ch*₂: 臭穢諸惡積聚: “bad accumulations of putrid filth.” *Ch*₁: 不淨處 (see below). For a similar expression see *SP* 113.13 (IV.22): *saṃkāradhānam* ... *pūṭikam uccāraprasāvavināśitam ca* /.

(3) *Lam nas* could reflect an instrumental of space in the Skt. For *puruṣāntara* see *CPD* s.v. *antara*: “a certain one, someone.” Throughout 4A–C neither *Bth* nor the Chinese versions mention that the nugget is round.

¹¹⁷ *gZhan dang gzhan* is probably a translation of *anyonya*: “various, different” (see *BHSD* s.v.). The terminology (*gnon pa*) is used to express the activity of the impure substances. In 4.3 the same word characterizes the *kleśas*. If it renders *abhibhūta*, it means “to drown, to superpose.”

¹¹⁸ *blTar mi snang bar gyur*: lit. “having become [something which] does not appear [anymore so that it could] be looked at.” *Ch*₁: 不現; missing in *Ch*₂.

¹¹⁹ Instead of “fifty years” *Bth* reads “sixty years” and does not mention “thousand years” at all. *Ch*₁: 經歷年載 (see below); *Ch*₂: “... ten, twenty, fifty or a hundred thousand years.”

¹²⁰ (1) Whereas *Ch*₂ at least shows a contrasting element with 亦 (“... yet [it] cannot benefit the people”), *Tib* is hardly understandable without extensive elaborations. Like *Ch*₂ also *Bth* terminates the first statement with a verb (*'dug pa*; 處) which is missing in *Tib* but is found in the verses: *gnas* (4.1d). Misplaced and without correspondence in any of the other translations is *Bth*: ... *brtson par byed pa de dag gi don kyang* ... (“also the benefit of those [who] practice...” or “also for those who...”) which appears instead of (*lo stong du?*) *mi gtsang bas* in *Tib*. *Ch*₂ in this passage: ... 處於糞穢。是其本體不壞，不染，亦....: “... lies in putrid feces. And though its nature is not perishing [and] not polluted, yet...” *Ch*₂: 不染 could be the counterpart for (*mi*) *gtsang bas* in *Tib* 4A.7, possibly misunderstood and not attributed to the gold in *Tib*.

(2) The whole of 4A in *Ch*₁: : “It is as if pure gold would fall into an impure place, [lying there] hidden [and] immersed [so that it would] not appear [anymore and] years would pass by. Though the pure gold would not perish, nobody would be able to know [its existence in that place].”

(3) In order to throw light on the original form of this statement we should have a look on the parallel verse *RGV* I.108: *yathā suvarṇam vrajato narasya cyutam bhavet saṃkarapūṭidhāne /*

bahūni tad varṣasatāni tasmīn tathāiva tiṣṭhet avināśadharmi //

Considering content and structure of the verse we find great similarity to the passage in 4A. Only the last aspect, i.e., that the gold cannot be of use for sentient beings, is not expressed in the *RGV* passage (nor does it appear in *Ch*₁). In the *RGV* there is a verb of existence (*tiṣṭhet*) and, what is most remarkable, *avināśadharmi*, the counterpart of *Tib*: *chud mi za ba'i chos can*, is positioned at the end of the whole verse. It does not function as the predicate of the sentence but as an attribute to *suvarṇam* and *tad* above. The verse *RGV* I.108 could be translated as follows:

[4B]

“Sons of good family, [if] then a divinity with divine vision looked at that round gold nugget, [the divinity] would direct a person:¹²¹

‘O man, go and clean that gold of excellent value [t]here, [which is only externally] covered with all sorts (*-jāta*) of decaying substances and filth, and use the gold [in the way] gold is to be used!’¹²²

In [this simile],¹²³ sons of good family, [what] is called ‘all sorts of decaying substances and filth’¹²⁴ is a designation for the different kinds of defilements.¹²⁵ [What] is called ‘gold nugget’ is a designation for [what] is not subject to perishability (*avināśadharmin*) [, i.e., the true nature of living beings].¹²⁶ [What] is called ‘divinity [with] divine vision’ is a designation for the Tathāgata, the Honorable One and Perfectly Awakened One.¹²⁷

Sons of good family, in the same way also the Tathāgata, the Honorable One and Perfectly Awakened One, teaches the Dharma to sentient beings in order to remove the defilements—[which are like] all sorts of decaying substances and mud—¹²⁸ [from] the imperishable true nature (*dharmatā*) of a tathāgata found in all sentient beings.”¹²⁹

Just as gold of a traveler might fall into a receptacle of dirt and putrid material [and] that [gold], having the nature of unperishability, would lie there in exactly the same way for many hundreds of years, ...

¹²¹ (1) *Ch*₁ does not mention that the divinity is looking at the gold (this is said in 4.1c of *Ch*₁). The divinity speaks to a group of people (cf. *RGV* I.109b: *narasya*; but *RGV* I.111b: *ṛṇām*).

(2) *bsGo* should be the future form of the verb *sgo ba*. The *RGV* has present optative forms in the parallel verses: *pravadet*, *upadiśet* (I.109, 111). With *bsgo*, the so-called “future” form, the Tibetan could render an optative in the Sanskrit. At the end of 7A we face the same situation (*bsgo*) along with *darśayet* and *vadet* in the corresponding verses of the *RGV* (I.118, 120). Cf. the section on irregular verb forms II C 3.2.

¹²² The parallel in *RGV* I.109 runs as follows: *suvarṇam asminn idam¹ agraratnam viśodhya ratnena kuruṣva kāryam* // [¹*idam* emended for *navam* according to Schmithausen 1971: 154]. All elements can also be found in *Tib*. *Ch*₂ understands the order to clean and to make use of the gold already as the following action: 其人聞已，則便取之。得已，淨洗，隨金所用。: “Having heard [the order], this person then takes it out. After having attained [it, he] cleans [it and uses it] in accordance with what gold is used [for].” In *Ch*₁ there is no directive to go. Instead of the purification it is said: 汝等出之: “Take it out!”

¹²³ In ... *bsgo na rigs kyī bu* ... the particle *na* refers to the whole illustration from the beginning in the sense of “... if a gold nugget had fallen down..., and a divinity had directed a person..., [then], sons of good family, [the following analogy could be drawn]:...”

¹²⁴ Only *Tib* does not include “the place” in the explanation of the analogy. *Bth*: *rul pa’i lud phung*¹ [¹ for *khang*]; *Ch*₁: 不淨處; *Ch*₂: 臭穢積聚.

¹²⁵ *Ch*₁: 無量煩惱: “innumerable *kleśas*”; *Ch*₂: 種種煩惱及隨煩惱: “different kinds of *kleśas* and *upakleśas*.”

¹²⁶ *Bth* reads here and also in 4.1 *avināśadharimatā* (*chos nyid ma rung bar mi ’gyur ba*; see also *Ch*₂: emended to 不壞法性. In *Ch*₁, as usual, *dharmatā* does not appear, therefore: 如來藏. *Tib* has most likely been adapted to conform to the expression in 4A.7, where it has *chud mi za ba’i chos can*. *Bth* and *Ch*₂ are here probably based on the Sanskrit original.

¹²⁷ *Ch*₁ reads 如來.

¹²⁸ Instead of *nyon mongs pa rul pa dang / ’dam rdzab lta bu rnams*, *Bth* reads *nyon mongs pa’i rul ba’i ’dam du gyur pa*. This makes clear that in the Skt. there was a compound ending with *-jāta* or *-bhūta* (*lta bu* for *jāta* see *MVy* 5390; for *bhūta* see *MVy* 5391). *-Jāta* or *-bhūta* could here of course also be understood as showing a comparison. However, as in 4B.3, where *-jāta* (there: *rnām pa*) had the meaning: “all sorts,” this meaning should also be adopted here. In the Chinese too a comparison does not appear explicitly. Similar compounds as here appear also in the parallel verses of the *RGV*: *tatkleśapaṅka-* (I.110c); *kleśamahāśuci-* (I.111c).

¹²⁹ This last passage is different in all translations. The shortest version has *Ch*₁: “Therefore the Tathāgata widely teaches the Dharma for [living beings] so that they all remove and destroy [their]

[4C]

Then at that time the Exalted One uttered these verses:

- [4.1] “It is just like [the example of some] man’s nugget of gold [that] has fallen into all sorts of filth: though it remained there in such a state for not a few years, [yet it would never be affected owing to its] imperishable nature.”¹³⁰
- [4.2] “[And] a divinity perceiving it with divine vision, in order to clean [it], would tell somebody:
‘Here is gold of excellent value! Clean [it] and use it [in the way gold] is to be used!’”¹³¹
- [4.3] “In the same way I [can] see that also all sentient beings have for a long time been constantly overpowered by defilements, [but] knowing that their defilements [are only] accidental (*āgantuka*), [I] teach the Dharma with [appropriate] means in order to purify [their] intrinsic nature (*prakṛti*).”¹³²

defilements, [they] all attain perfect awakening [and] perform the acts of a buddha.” *Ch*₂: “Sons of good [family], [in] all sentient beings [there is] the true nature (法性) of the tathāgatas, [just like] a truly excellent jewel, immersed in defilements [just like] putrid filth. Therefore, in order to remove all defilements from sentient beings [just like from the nugget of gold the person removed] putrid filth [and] impurities, the Tathāgata, Honourable One and Perfectly Awakened One teaches the wonderful Dharma so that [sentient beings] become buddhas, appear in the world [and] perform the acts of a buddha.” In the Chinese the following four basic elements can be separated:

- The existence of the *dharmatā* within sentient beings (*Ch*₂).
- The teaching activity of the Tathāgata. In *Ch*₂ the exact relation between teaching and the purification process cannot be determined unambiguously. In the Tibetan, on the other hand, the purification is clearly the *aim* of the teaching (*Tib*: *bsal ba'i phyir*; *Bth*: *med par bya ba'i don kyi phyir*). In this respect the Tibetan is in accordance with *RGV* I.110: ... *tatkleśapaṅkavyavadāna-hetor dharmāmbuvarṣaṁ vyasṛjat* ... and *RGV* I.111: ... *dharmam adīśat tacchuddhaye*....
- The removal of the defilements.
- The subsequent activity of living beings after the removal of their defilements, i.e., bestowing the buddha-acts on others. This last element is not found in the Tibetan.

The particle of comparison: *de ltar* appears only in *Tib*. *Bth* reads '*di ni* instead.

¹³⁰ Instead of *avināśadharmīn* *Bth* reads *avināśadharmatā*; *Ch*₂ simply has 不壞. Contrary to the verse *RGV* I.108 (quoted above), *Tib* and *Ch*₂ (against its own prose) show a concessive construction in pāda d (*kyang*; 雖). Alone *Bth* keeps to the same structure as in its prose. Neither *Ch*₁ nor *Bth* seem to have a counterpart for *Tib*: *de ltar* in 4.1d. But cp. *RGV* I.108d: ... *tathaiiva tiṣṭhet*.... As is the case in the prose of *Ch*₂, also here the falling of the nugget is described as being sudden (忽然) and by inadvertence (悞) in *Ch*₂. *Ch*₁ 4.1 anticipates verse 4.2ab of *Tib*: “As if gold would be placed in impure materials, hidden [and] immersed [so that] nobody would be able to see [it, but] somebody with divine vision would perceive [it] and then inform a group of people about it.” Also this verse, like the prose, shows strong similarity with its parallel verse *RGV* I.108.

¹³¹ In pāda b, *Ch*₂ combines pādas b and c of *Tib*. Pāda c and d of *Ch*₂ correspond to pāda d and 4.3a of *Tib*. *Ch*₂ does not mention the motive of giving the directive (*rnam par sbyang phyir*). For “gold of excellent value” it simply has: 金. *Ch*₁: “O you, if [you] take out this [gold and] wash [it] so that [it] becomes pure, [you will be able to] use [it] as you like [so that] all [your] relatives would attain blessing.” The last pāda of *Ch*₁ is not found in any of the other translations. Also verse 4.2 of *Tib* is nearly identical with the parallel verse *RGV* I.109.

¹³² Literally: “... knowing their accidental defilements,....” My translation above is in accordance with *Ch*₂ (知彼煩惱為客塵): “... knowing that their defilements are accidental,....” *Bth* does not have a counterpart for *rtag* (pāda b) and *chos* (pāda d) which are both missing also in *Ch*₂. *sMras* in *Bth* instead of *ston* is the perfect form in line with *RGV* I.111d: ... *dharmam adīśat*. *Ch*₂ continues with what corresponds to *Tib* bcd and adds in pāda d: 令證清淨如來智: “... so that [sentient beings] testify (= realize) the pure tathāgata-knowledge.” Like *Bth*, *Ch*₂ does not mark the cleaning of the intrinsic nature as aim: 自性清淨方便說: “... [and knowing that their] intrinsic nature [is] pure, [he] teaches with [appropriate] means....” Also here the translators or revisers of

[5 The simile of a hidden treasure beneath the house of some poor person]

[5A]

“Sons of good family, again it is as if in the earth beneath a storeroom in the house of some poor person, under a covering of earth seven fathoms (*puruṣa*) deep there were a great treasure, full of money and gold, [of the same] volume as the storeroom.¹³³ But the great treasure—not being, of course, a sentient being, given [its lack of] a mental essence—¹³⁴[could] not say to the poor [man]:

‘O man, I am a great treasure, but [I am] buried [here], covered under earth.’
[In his] mind the poor man, the owner of the house,¹³⁵ would consider [himself] poor,¹³⁶ and even though [he] walked up and down directly above

Tib have probably added *phyir* in trying to structure the verse clearly. Only *Ch₁* comprises four verses in 4C. Verses 4.3 and 4.4: “[4.3] [With] the vision of a *sugata* (善逝) [the Tathāgata] perceives all kinds of living beings similarly: in the dirt of defilements [there is] buddhahood, not [subject to] decay. [4.4] [He] teaches the Dharma according [to the situation] (隨應; *anukūla*) so that [they awake and] perform all acts [of a buddha]. The covering defilements of buddhahood are quickly removed so that [they all become] purified.” *Ch₁* does not use the characteristic terminology of (*citta*)*prakṛti* – *āgantukakleśa*. The thread of the last verse of *Ch₁* is not very clear. As it is in the prose, the performing of buddha-acts would be expected to be mentioned at the end of the verse. The buddha-acts appear in *Ch₁* and *Ch₂* in the prose and in the verse of *Ch₁*. As *Ch₁* contains four verses in 4C it is very likely that the buddha-acts were also part of a fourth verse in the Skt. original which was not transmitted by *TGS₂*. However, I cannot explain why the buddha-acts are not found in the prose of *Tib* and *Bth*.

¹³³ (1) For *gter chen po* (Skt. *mahānidhi*, *mahānidhāna*): *Ch₁*: “treasure of rare jewels” (珍寶藏); *Ch₂*: “great hidden treasure” (大伏藏).

(2) A counterpart for the first *kośa* does not appear in *Ch₁₂* (*Bth*: *re lto?*). In the second case *Bth* (*rgyang grags*) and *Ch₂* (俱盧舍) read *krośa*, an Indian unit of measurement of several hundred meters. *Bth* (*’khor rgyang grags*) should be understood as “with a circumference of one *krośa*”; *Ch₂*: “in length and width equally one *krośa*” (縱橫正等一俱盧舍).

(3) *Mi bdun srid*: “seven *puruṣas* deep”; one *puruṣa* corresponds to the armspan of a human (so according to Balbir 1993: 29, citing S. Srinivasan; cp. *MW* s.v.: “the height or measure of a man”).

(4) The passage in *Ch₁*: “It is as if there were a treasure of rare jewels [in] a poor household.”

¹³⁴ The last part of the sentence from *’di lta ste* till *yin pa’o* // gives the reason why the treasure cannot speak. The construction in Skt. may be introduced with *yathāpi* (see *Bth*: *kyang ’di lta ste* : *dper*) which can have the meaning of “... because of course, because obviously, in giving a (more or less evident) reason for what has just been said....” (*BHSD* s.v. *yathāpi* (1)). *Bth*, not combining *ngo bo nyid* with *sems*, seems to be smoother: *kyang ’di lta ste* : *dper gter chen po de la yid med de* : *ngobo nyid kyis sems can ma yin pa na* :: “Because of course the great treasure does not have a mind and is by nature no sentient being,....” *Ch₂* gives another reason: 以地覆故: “Because [the treasure] is covered by earth,....” This statement (not as a reason) is part of the following direct speech in the Tibetan translations. That the idea of a treasure with intelligence is not at all absurd in the classical Indian context is shown by a discussion of Kātyāyana in which he states: *sarvaṃ cetanāvat* (see Thieme 1984: 135ff.).

¹³⁵ In contrast to 0F where Skt. *grhapati* is rendered with *khyim bdag* meaning “nobleman,” with *khyim gyi bdag po* here the translators express a different understanding as implied in my rendering. I am not sure in which sense the Sanskrit should be understood. Accepting also here the meaning “nobleman” the “storeroom” in 5A.1f. could thus well be an empty treasury of a (formerly) rich nobleman. Also of interest is the function of the *grhapati* as one of the seven jewels of a *cakravartin*: it is the *grhapati*’s function to discover hidden treasures with his divine vision (which the *grhapati* in the *TGS* obviously lacks) and to make them part of the ruler’s possession given that there is no other proprietor.

¹³⁶ Cf. *SP* 108.1ff. where it is said about a poor man working for a rich person without knowing that this person is his own father:

atha khalu bhagavan sa daridrāpuruṣo paryāyena tac ca tasya grhapatēḥ prabhūtaṃ hiranyasuvarṇadhānadhānyakośakoṣṭhāgāraṃ samjāniyād ātmanā ca tato niḥsprho

the [treasure], he [could] not hear of, know of, or perceive the existence of the great treasure beneath the earth.¹³⁷

Sons of good family, in the same way, [in] all sentient beings, beneath the[ir] thinking, [which is based on] clinging (*abhiniveśamanasikāra*)—[and] analogously to the house¹³⁸—there is [also] a great treasure, [namely] the treasury¹³⁹ of the essence of a tathāgata (*tathāgatagarbha*), [including the ten] powers (*[daśa] balāni*), [the four kinds of] self-assurance (*[catvāri] vaiśāradīyāni*), [the eighteen] specific [qualities of a buddha] (*[aṣṭādaśa]-āveṇika[-buddhadharmāḥ]*), and all [other] qualities of a buddha.¹⁴⁰

bhavaṇa na tasmāt kimcit prārthayed antaśaḥ saktuprasthamūlyamātram api tatraiva ca kaṭapalikuṇcikāyām vāsam kalpayet tām eva daridrācintāṃ anuvicintayamānaḥ //

In this passage *dairidracintā* should be interpreted as “thoughts [characteristic for] poor [people]” or as an *iti*-compound in the sense of “thoughts [like ‘I am] poor.” In any case, the thoughts of the son are unjustified as he in fact is the legitimate son of the rich person. The terminology of the TGS: **dairidracintena anu(vi)cintayet* should be understood in the same way as the context is of similar nature. See also SP 108.6; 115.2. *Ch*₂: 心懷窮匱、愁憂、苦惱、日夜思惟。: “[His] mind embraces poverty, anxiety, grief [and] pain, thinking day and night.”

¹³⁷ (1) The above two passages in *Ch*₁: “The treasure cannot say: ‘I am here!’ And since [the nobleman] himself does not know [about its existence] and nobody would tell [him about it, he] could not disclose this rare treasure.”

(2) See *Chāndogya Upaniṣad* 8.3.2 for a similar description: “But just as one who does not know the spot, does not find the gold-treasure [*hiranyanidhi*] concealed under it, although he again and again goes over [*upary upari samcarantaḥ*] that spot, so also all these creatures do not find the world of Brahman, although they enter into it every day (in deep sleep); ...” (translation in Paul Deussen, *Sixty Upaniṣads of the Veda*, vol.1, transl. from German by V. M. Bedekar and G. B. Palsule, Delhi: Motilal, p. 193f.; My thanks are due to Mr. Martin Delhey and Dr. Ulrike Roesler who called my attention to and located this passage.)

¹³⁸ The Sanskrit for *khyim lta bur gyur pa* could be **niveśanasthāniya*. The sequence of *niveśana* and *abhiniveśa* before could have been intended in the Skt. text to underline, by a play upon words, the parallel between the nobleman bound to the house, and living beings caught in their negative way of thinking. The analogy is missing in *Bth* and *Ch*₁. *Ch*₂ shows a understanding different from *Tib*: 一切有情住 ... 舍中, 而有 ... 諸佛法藏,: “All sentient beings live in the house of ... and yet they have the store of all buddha-qualities....” Obviously *Ch*₂ has interpreted *sthāniya* in the sense of “to be (in).” Amoghavajra probably had in mind the simile of the burning house of the *SP* where the house is compared with saṃsāra (see SP 72.1ff.).

¹³⁹ *mDzod kyi gter chen po* appears in *Bth* as *mdzod // gter chen po bzhin gyur te* :: “a treasury similar to [that] great treasure.”

¹⁴⁰ The groups of qualities mentioned here characterize a buddha. They are dealt with in e.g. *RGVV* 91.14–97.16; see also *MVy* 119–153 and *BHSD* s.v. *āveṇika*, *daśabala*, *vaiśāradīya*. In the above enumeration, *Tib* has analyzed the compound *āveṇikabuddhadharma* as a *dvandva*: *ma 'dres pa dang / sangs rgyas kyi chos*. However, in 5B.13 *Tib* interprets it correctly as *sangs rgyas kyi chos ma 'dres pa*. *Bth* analyzes the compound in both cases as in *Tib* 5B.13. As *Bth* (*de bzhin gshes pa 'i yeshes dang : stobs dang* :), *Ch*₁ (如來知見), and also *Ch*₂ (如來智慧) demonstrate, the original wording can hardly have been *tathāgatagarbha* (*Tib*: *de bzhin gshes pa 'i snying po*). All versions except *Tib* are based on *tathāgatājñāna*. *Tib* itself has *ye shes* instead of *snying po* in the parallel in 5B. We must thus conclude that already the Indian manuscript on which *Tib* was based, had the reading *-garbha* instead of *-jñāna*, or that the newly introduced reading *garbha* is due to a mistake or even a deliberate alteration by the translators of *Tib*. However, the words *tathāgatājñāna* and *tathāgatagarbha* are metrically equal in Skt. and, especially if we assume an oral tradition, confusion between the two terms could easily be explained. A deliberate alteration by the translators of *Tib* is also not very likely because this would probably have included the alteration of the parallel passage in 5B. Following the supposed original Skt. wording with *-jñāna*, as it appears in 5B, we should understand the “tathāgata-knowledge” as another member in the enumeration of buddha-qualities. *Ch*₁₂ do not mention the *āveṇikabuddhadharmas*. Instead of *tathāgatājñāna*, *Ch*₁ has 如來知見 (**tathāgatājñānadarsana*).

And yet sentient beings cling to color and shape (*rūpa*), sound (*śabda*), odor (*gandha*), flavor (*rasa*) and tangible objects (*spraṣṭavya*),¹⁴¹ and therefore wander in saṃsāra, [caught in] suffering (*duḥkhena*). And as a result of not having heard of that great treasure of [buddha] qualities [within themselves, they] in no way apply [themselves] to taking possession [of it] and to purifying [it].¹⁴²

[5B]

“Sons of good family, then the Tathāgata appears in the world and manifests (*saṃprakāśayati*) a great treasure of such [buddha] qualities among the bodhisattvas.¹⁴³ The [bodhisattvas] then acquire confidence in that great treasure of [buddha] qualities and dig [it] out. Therefore in the world [they] are known as ‘tathāgatas, honorable ones and perfectly awakened ones,’ because having become [themselves] like¹⁴⁴ a great treasure of [buddha] qualities, [they] teach sentient beings the aspects of [this] unprecedented argument [of buddhahood in all of them] (**apūrvahetvākāra*), similes [illustrating this matter], reasons for actions, and [tasks] to fulfill.¹⁴⁵ [They]

¹⁴¹ In the Buddhist enumeration of the five sense objects *spraṣṭavya* is usually translated as *reg bya* (cf. *MVy* 1863). However, the Tibetan version of the *LAS* has also *reg pa* (cf. *LAS*₁ s.v. *spraṣṭavya*) just as is the case in *Bth*.

¹⁴² Only *Tib* arranges the purification in a finality clause (*yongs su sbyang ba'i phyir*). The last two passages in *Ch*₁: “[They] do not hear nor recognize [the treasure, they] take pleasure in and are misled by the five desires, wander around in saṃsāra [and] experience measureless pain.” In *Ch*₂ the “wandering in saṃsāra” is omitted. The reason for not hearing of the treasure is the clinging to the five desires and the pain involved (... 於色、聲、香、味、觸耽著，受苦。). The final part in *Ch*₂ runs as follows: “Therefore they do not hear of the great treasure of [buddha] qualities, let alone that it could be attained. If [they] eradicate those five desires [they] will attain purity.”

¹⁴³ *Ch*₁ speaks of “several buddhas” (諸佛) and does not mention the bodhisattvas. Instead of “a great treasure of such qualities” (alternatively: “such a great treasure of qualities”) *Ch*₂ reads 大法種種寶藏: “great store of various jewels[, i.e., the buddha] qualities (*dharmas*) (?)” It goes without saying that the twofold meaning of Skt. *dharma* can be applied throughout 5.A–C. Whereas *Ch*₁ continuously understands *dharma* in the sense of “qualities” of a buddha, the Tibetan and *Ch*₂ allow an ambiguous interpretation. See, for example, the use of the verb *saṃprakāśayati* in this passage which could mean the concrete opening of the treasure (*Ch*₁: 開) but also the disclosing of the teaching. This room for interpretative ambiguity may already have been part of the Skt. original.

¹⁴⁴ (1) For *Ita bur* in *Tib* there is no parallel in the other versions. Instead, *Bth* has *gdon¹ miza bar* [for *gnod*; *metathesis*] for **avaśyam*; *Ch*₂: 爲...

(2) According to Matsumoto 1994: 515ff., this passage proves that the original intention of the illustration is to identify the living being with the treasure (*sattva* = *nidhī*). All other passages mentioning the treasure *within* living beings (*sattva* ≠ *nidhī*) display, according to Matsumoto, a later development in which *nidhī* as the counterpart for *tathāgatagarbha* is already understood as a separate entity. I find Matsumoto’s position philologically difficult to maintain and not necessary. If we consider as the counterpart for *nidhī* in the *upameya* the tathāgata within living beings (as expressed in 5.3) the compound *tathāgatagarbha* could still be interpreted as a *bahuvrīhi* referring to *sattva*.

¹⁴⁵ What the terms of the enumeration in detail stand for, is unclear. Similar passages in the *SP* point to the context of teaching living beings with different dispositions under the topic of *upāyakauśalya*. For example:

ḍṛṣṭāntahetūn bahu darśayanti bahukāraṇān jñānabalena nāyakāḥ /
nānādhimuktāms ca viditva sattvān nānābhīnīrḥār’ upadarśayanti // 54.1f. = II.107,

Further: ... *nānābhīnīrḥāra-nirdeśa-vividha-hetu-kāraṇa-nidarśanārambaṇa-nirukty-upāyaka-
kauśalyair nānādhimuktānām sattvānām ... tathāgato ... dharmam deśayati / (71.7ff.; very similar
also 41.2ff.; 41.12ff.; 42.14f.; further 39.11f. and 45.5f. = II.44).*

are donors (*dānapati*) [who give from] the storeroom of the great treasure, and having unhindered readiness of speech (*asaṅgapratibhānavat*), [they are] a treasury of the many qualities of a buddha, including the [ten] powers and the [four kinds of] self-assurance.¹⁴⁶

Sons of good family, in this way, with the completely pure vision of a tathāgata, the Tathāgata, the Honorable One and Perfectly Awakened One, also perceives that all sentient beings are like the [poor owner of the house with the hidden treasure] and then teaches the Dharma to the bodhisattvas in order to clean the treasury [in all sentient beings, which contains such qualities as] the tathāgata-knowledge, the [ten] powers, the [four kinds of] self-assurance and the [eighteen] specific qualities of a buddha.¹⁴⁷

[5C]

Then at that time the Exalted One uttered these verses:

[5.1] “[It is] as if beneath the house of a poor [man] there was a treasure full of gold and money, in which neither motion nor thinking¹⁴⁸ was existent and [which could] not say: ‘I am yours!’”¹⁴⁹

(1) *sNgon ma byung ba'i gtan tshigs kyi rnam pa*, Skt. **apūrvahetvākāra*, appears also in *Ch₂* (未曾有因相). *Bth*: *rim kyi thog mar rgyu dang* : *rnam pa* could render the same Skt. compound (with **anu-pūrva^o* instead of *a-pūrva^o*) interpreted as a *dvandva*. Similar expressions occur in the *MPNS* and the *Suv*. There, with *hetu* they also designate the “arguments,” or less strictly, the “contents” of the sūtra: *Suv* 126.4: ... *nānāvidhāni sūtrāntahetūni* (= *Suv*, 97.5–6: *mdo sde'i gtan tshigs rnam pa sna tshogs*); *MPNS* cited in Shimoda 1997: 271, n. 65 (p. 597): ... *sems can thams cad la de bzhin gshegs pa'i snying po yod do zhes bya ba'i gtan tshigs dang rtags rnams kyi sgo nas...* (Chinese (Faxian 法顯): ... 因緣相貌...). For Tibetan *gtan tshigs* (in contrast to *rgyu*) for *hetu* cf. *Jā* s.v. *gtan tshigs*: “1. argument....”

(2) *Byed pa'i gtan tshigs* (5B.6), Skt. **kāraṇahetu*, remains difficult (see *MVy* 2260: *byed pa'i rgyu* for *kāraṇahetu*). The term appears in a classification of *hetus* in *LAS* 83.9, 14; see also *AK(Bh)* II.50. The *SP* only knows the compound *-hetukāraṇa-*. *Bth* reads *dgongs pa* instead.

¹⁴⁶ Instead of *stobs dang / mi 'jigs pa dang / sangs rgyas kyi chos* *Bth* reads simply *shes rab*, Skt. *prajñā*. *Ch₂* already here enumerates all the elements mentioned only at the end of 5B in the Tibetan. After mentioning that the bodhisattvas have acquired confidence *Ch₂* continues: “... then [they] dig [for the treasure, i.e.,] enter the bodhisattva stages. [Finally as] tathāgatas, honourable ones and perfectly awakened ones [they] function as stores of the Dharma [in] the world. [They] perceive [in] all sentient beings the aspect of the unprecedented cause [for buddhahood] (未曾有因相; **apūrvahetvākāra*). Therefore [they] teach the great store of the Dharma in similes, [they] become great donors, storerooms of unhindered readiness in speech, of measureless knowledge, the [ten] powers, the [four kinds of] self-assurance [and] the [eighteen] specific qualities of a buddha.” The passage in *Ch₁*: “After those [living beings?] have full of confidence attained the pure knowledge of all [matters], they widely disclose the store of a tathāgata for living beings; [they have] unhindered readiness in speech [and] act as great lords of the giving [of donations] (*mahādānapati*).”

¹⁴⁷ The enumeration of buddha-qualities is missing in *Ch₁₂* (instead: 如來藏). In *Bth* and *Ch₁₂* there is no equivalent for *de lta bur* in 5B.11. The aim of the purification (*sbyang ba'i phyir*) is not expressed in *Bth* (scribal mistake?). Therefore: ... *mdzod yongsu sbyangs pa'i byangchub sems dpa' rnams*: “... to the bodhisattvas [whose] treasury of ... has become pure.” *Ch₁* as well as *Ch₂* show the following logical relation: because the Tathāgata perceives all living beings as having the store of a tathāgata (如來藏), he teaches the Dharma to the bodhisattvas.

¹⁴⁸ The word pair *g.yo ba – rlom sems*, Skt. *iñjanā – manyanā*, points to the second level of the simile: the negated terms can characterize the mind of somebody who has entered the state of absorption (e.g. *SP* 5.10f.: *aniñjanā*) or the mind of a tathāgata (see *RGVV* 9.10ff). The word pair is missing in *Ch₁*. For *manyanā* the *BHSD* shows the following explanation: “conceit in the sense of vain, illusory imagining....” However, Tibetan *rlom sems* does not comprise this meaning (cf. *Jā* s.v. *rlom pa*: “*rlom sems* pride, arrogance.”) Here, however, the term **amanyanā* probably simply refers to the fact that the treasure is without “a mental essence,” as mentioned in the prose.

- [5.2] “At the same time a sentient being, the owner of the house, had become poor. But because [he] would not know [of the treasure] and [because] there was nobody [who] had informed him, the poor [man] would remain above the [treasure without digging it out].”¹⁵⁰
- [5.3] “In the same way, with the vision of a buddha I see that in all sentient beings—though [from the outside] they resemble poor [men]—there is a great treasure; and [I see this treasure] as the motionless body of a *sugata*.”¹⁵¹
- [5.4] “I see that [treasure and] teach¹⁵² [the following] to the bodhisattvas:
‘O you [bodhisattvas], take the treasury of my knowledge! Act [so that you may] become treasures of the supreme Dharma, being free of poverty and becoming protectors of the world (*lokanātha*)!’”¹⁵³

¹⁴⁹ In *Ch*₁₂ and *Bth* it is not said that the treasure is *beneath* the house. However, only *Ch*₁ speaks of a treasure *in* the house also in the prose. Instead of a treasure (*gter*) *Bth* mentions a vessel (*snod*). *Ch*₁, parallel to its own prose, does not describe the treasure as filled with gold and money. 5.1cd in *Ch*₁ run as follows: 主既不知見 寶又不能言: “Since the master [of the house] would not know about [nor] perceive [it], and the jewel [treasure] also could not speak, [5.2]....” In *Ch*₂ the treasure cannot say the following: “This [here] is a certain thing!” (是某物).

¹⁵⁰ *Bth* differs from the other translations in pāda b: *mi shes pas na dbus gyur pa* : (*dbus* several times for *dbul*): “As [the nobleman] did not know [about the treasure, he] became poor.” Pādas a and b in *Ch*₂: 彼人雖復爲主宰 受於貧乏而不知: “Though this person further is the master [of the house, he] experiences poverty and does not know [about the treasure].” In pāda d, *Ch*₂ repeats its on statement of pāda b: 而受貧窮住苦惱: “... and [he] experiences poverty [and] dwells in sorrow.” In pāda c it seems that subject and object have been confused: 彼亦不說向餘人: “That [master?] also does not inform anybody.” The whole verse in *Ch*₁: “Poverty-stricken years [his mind] embraces dullness (= ignorance about the treasure). There is nobody telling [him the facts. Though] there is a treasure, yet [he] does not know [about it.] Therefore [he] continues to be in poverty and sorrow.” The statement of *Ch*₁₂ is also found in the parallel verse of the *RGV* (I.113cd) referring to living beings in the *upameya*: *abudhyamānānubhavaty ajasraṁ dāridryaduḥkhaṁ bahudhā prajeyam* //: “[In the same way, because living beings] do not recognize [the treasure within themselves, they] perpetually experience suffering in form of poverty (or: the suffering [of saṁsāra] similar to poverty) in manifold ways.” Cf. in particular the compound *dāridryaduḥkha* with *Ch*₁: 貧苦.

¹⁵¹ (1) Both Chinese translations differ in pāda b. *Ch*₁: 雖流轉五道: “... [see that living beings], though circulating [in] the five paths [of existence],....” *Ch*₂: 一切有情處窮匱: “... [see] that all sentient beings dwell in poverty.” The comparison between living beings and the poor is only stated in *Tib* (*Bth* has *gyur pa* instead of *'dra*; cf. n. 128). See *RGV* I.114c: ... *sattvā daridropamāḥ*.

(2) *Sugata* is another of the standard set of epithets of a buddha. For traditional interpretations of *sugata* see *MPPU*_L I.131f. Both understandings, namely “[one who] has well spoken [the Dharma]” as well as “[one who] has perfectly entered [*nirvāṇa*],” are discussed there. See also Griffiths 1994: 105.

(3) 5.3d in *Tib* is grammatically difficult; literally: “... [and I] see [this treasure] as the motionless and *sugata*-[like] body(?)” Pāda d as found in *Ch*₂ (see below; the reading gains support by *Bth*) seems more appropriate. *Ch*₁ does not mention the body of a *sugata*. Instead it is said that the treasure is always in the body (of living beings), without alterations (大寶在身內 常在不變易). Pādas cd of *Ch*₂ (身中而有大伏藏 住諸佛體不動搖: “I see that] in the bodies [of sentient beings] there are great hidden treasures: there is the essence of the buddhas, motionless.”

¹⁵² The perfect form of *ston pa* (*Bth*: *smras*) might have been employed due to the temporal relation between the teaching activity and the following acquisition of confidence (described in 5.5) in this teaching.

¹⁵³ In pāda c a great treasury of knowledge is mentioned in *Bth* (*yeshes kyi ni mdzod chen*) and *Ch*₂ (大智藏), whereas *Tib* adds the personal pronoun of the first person (*mama* instead of *mahā*?). A further parallel between *Bth* and *Ch*₂ is the verb “to dig out” (*thon*, imperative of *'don pa*; 穿) instead of “to take” (*zung*). Pāda d in *Ch*₂: 能施無上之法財: “.. [so that you] may grant the supreme wealth of the Dharma/the wealth of the supreme Dharma.” Also, *Ch*₁ and *Bth* mention

[5.5] “Whoever acquires confidence in [this] my teaching—in each of those sentient beings is a treasure. Whoever, having acquired confidence, exerts himself will quickly attain excellent awakening.”¹⁵⁴

[6 The simile of a sprout in the seed]

[6A]

“Sons of good family, again it is like the example of a fruit of a mango tree, a rose apple tree, a palmyra palm or of cane:¹⁵⁵ inside the sheaths of the outer

“wealth” (大富; *nor*) and the element should thus be considered as original. Pāda d of *Bth* is similar to *Ch*₂: *bla na med pa chos kyang nor yang sbyin* : : “... [so that you may] grant the supreme Dharma, as well as wealth.” The difference between *Ch*₂ and *Bth* might be explained by supposing a different interpretation of a compound **anuttaradharmavasū* or **anuttaradharmadhana*. The complete verse in *Ch*₁: “Having observed thus [the Tathāgata] teaches for living beings so that [they] may attain the treasury of knowledge [leading to] great wealth and wide profit.” The bodhisattvas remain unmentioned in *Ch*₁.

¹⁵⁴ (1) It is very unlikely that *Tib* has here preserved the original intention of the Skt text. *Bth* does not show any demonstrative pronoun in pāda b that takes up the relative pronoun of pāda a, nor is there a particle ending the sentence at the end of pāda b. The demonstrative particle appears only in pāda d of *Bth* which accounts for the following translation: “[Those] who acquire confidence in that [what] I have taught, [namely that] in sentient beings there is even a treasure, who acquire confidence and apply themselves [to its excavation], they will quickly attain even excellent awakening.”

(*gang cig nga 'is¹ bshad pa de la mos //*
semś can la ni gter ya_{ng} yod :
gang zhig shin tu mos shing brtson byed pa //
de ni byangchub mchog kyang myur rnyed do //
 [¹ *nga 'is* for *nga 'i sa* in the ms])

Also the Chinese versions make such a rendering most plausible as the original intention of the verse. Pāda c in *Ch*₁: “..., [and] practices [with adequate] means (*upāya*) faithfully and diligently,....”

(2) *bDag nyid* in *Tib* 5.5c remains without any counterpart in the other three translations.

¹⁵⁵ (1) All of the plants mentioned are widely known in India and often mentioned in the literature:

a. (*Shing*) *a mra*, Skt. *āmra*: the mango tree (*mangifera indica*) is a huge, evergreen tree, whose fruits belong to the best known in India. Inside the fruit there is a massive kernel which produces the sprout (see McCann 1959: no.25).

b. *'Dzam bu* or *dzam bu*, Skt. *jambu*: also the rose apple tree (*eugenia jambolana*) is very well known in India and is considered the center of the continent *jambudvīpa*, one of the continents believed to constitute the world. The rose apple tree can reach more than 25 meters in height. Its fruits are longish and about 2.5 cm in size. When the fruits become mature they look similar to black olives and are eaten by humans and animals or processed into juice. In relation to the fruit pulp around, the kernel inside the fruit is relatively big. See Syed 1990: 288–302; McCann 1959: no.27).

c. *Ta la*, Skt. *tāla*: also the palmyra palm (*borassus flabellifer*) can reach more than 25 meters in height. In the old texts it serves as a measure unit for heroes and other imposing figures. The palmyra palm grows slowly and flowers for the first time after 12 till 15 years. Stem and fruits are hard, the fruits are eatable but not tasty. Above all, the tree's stem and fan-shaped leaf crown are used as materials. The fruits are found grouped at stems with a diameter of max. 15 cm each. Shielded by a peel like leather, inside the fruit there are two or three seeds again covered by fibrous material. The seeds are about 5 cm in diameter. See Syed 1990: 308–325; McCann 1959: no.42.

d. *sPa*, Skt. **vetra*: *Jā* gives the meaning “cane” for *spa* and mentions examples where *spa* in compounds means “bamboo.” In *MVy* 4217 the Skt. equivalent *vetra* is found for *sba* (acc. to *Jā* another spelling of *spa*). *Bth* reads *'deb 'dre* (prose) and *(¹)beb(²)bab tra* (verse) instead of *spa* which could be a transliteration of *vetra*. (The transliterations *'ba* or *dba* for Skt. *va* in *Bth* are

peel there is a seed of imperishable nature (**avināśadharmin*) [containing] a sprout, [a seed] which, thrown on soil, will become a great king of trees.¹⁵⁶

Sons of good family, in the same way also the Tathāgata perceives that [sentient beings who are] dwelling in the world¹⁵⁷ are completely wrapped in the sheaths of the outer peel of [such] defilements [as] desire

not uncommon: cf. 'Ba' gi ya sha for **Vāgīśa*, and *u ru dbyil ba* for *uruvilvā*. Difficult to explain is in fact *-b* at the end of the first syllable.) The *pW* has “eine grössere Art Calamus, etwa *fasciculatus*, zu Stöcken gebraucht” for *vetra* and knows the compound *vetraphala*. *Ch*₂ confirms *vetra* (籐 and 藤 (“wisteria”) seem to be not strictly distinguished): “reed, rattan, cane.” Takasaki (1981: 23) translates *spa* as “pine tree” (松). The fact that cane or bamboo is conceived of as a “great king of trees” is not surprising as it can reach a height of 40 meters and its fruits, in case of the *melocanna bambusoides*, a kind of bamboo, are described as similar to apples (*Meyer* s.v. *Bambusgewächse*). Also worth mentioning is the enormous speed of growing bamboo of up to one meter on a single day.

(2) *Bth* mentions another fruit: *ba sa na'i 'bras bu*. Its identification is not clear. *Ch*₁ here and in 6.1 only speaks of a mango fruit (菴羅果). *Ch*₂ enumerates the plants in the opposite order. In case of the mango and the rose apple tree *Ch*₂ speaks of “the seeds of the fruits” (果子) whereas for the palmyra palm and cane it only reads “seed” (子). This differentiation is not found in the Tibetan.

¹⁵⁶ (1) *Ch*₂ do not mention the “sheaths of the outer peel.” *Bth* does not describe the peels as “outer”; *shun phrag* should probably be emended to *shun pags* (cf. *Jā: id.* [with *shun pa*]). However, in 6.1b *Bth* also speaks of “outer peel”: *phyirol shun[i] phrag*.

(2) The compound *bijānkura* (“sprout [in the state] of a seed”) of *RGV* 63.20, *RGV* I.115b and I.117.c is not found in *Tib*; instead: *myu gu'i sa bon*, Skt. *aṅkurabija*: “seed [whose characteristic is an encapsulated] sprout”; *Ch*₂: 子芽 for *bijānkura*? *Bth* reads *sa bon dang* : *myu gu* and adds *'byung bar 'gyur ba yang* (in *Ch*₂: 子芽展轉相生; missing in *Tib*). The compound in *Bth* as well as in *Ch*₂ (for a translation see below) must be understood as a *dvandva*. *Bth*: “In spite [of the fact that the tree appears different,] emerging [alternatingly as] seed and sprout, [it is] of unperishing nature(?)” Takasaki’s rendering of *aṅkurabija* in *Tib* with 芽となるべき種子 (1981: 23f.): “seed which will become a sprout” suggests that the seed turns into a sprout only in a later step. This is in contradiction to verse 6.1 where the sprout is clearly described as already within the seed (... *spa yi 'bras bu...// nang na spa yi myu gu yod pa ste //*). The section in *Ch*₁: “Just as the kernel inside a mango does not perish, [and when one] sows it into the earth, [it] becomes a great king of trees,...” *Ch*₂: ... 由其子芽展轉相生, 成不壞法, 若遇地緣, 種植於其, 久後成大樹王。: “[Just as the seed of ... a mango] realizes the quality of indestructibility as a result of the fact that the seed and sprout generate each other alternately (展轉; **pāramparyeṇa*), [and the seed,] when meeting with the conditional factor earth (地緣), sown into it, after a long time becomes a great king of trees,...” (For 緣 see *RGV* I.116c: ... *tat tat kuśalam praṭītya* ... and I.117d ... *śubhapratyayaḥ //*.) The content of *Tib* differs from *Bth* and *Ch*₂ in that it omits the passage that seed and sprout appear in alternation. Due to the fact that this statement appears in the verse section (6.1d) of *Tib*, though in a different form, it can be assumed that it was in fact also part of the prose of *TGS*₂. However, the statement is also missing in both the prose and verse section of *Ch*₁. In light of the statement of the mutual alternating generation of seed and sprout it seems that *Bth* and *Ch*₂ put their main accent on the *eternal sameness* of the tree’s nature in spite of manifesting itself in different shapes. This aspect appears to carry more weight than the future *development* into a king of trees.

¹⁵⁷ Probably due to the significant position of the term *sattva* in the following section, *Tib* paraphrases sentient beings here with *'jig rten na gnas pa*; *Bth*: ... *mdzod du 'jig rten zhugs shing gnas pa*: “... [perceives] that living beings (*loka*) have entered and [now] dwell in the sheaths...” or (parallel to *Tib*): “... [perceives sentient beings who] have entered and are [now] dwelling [in] the world, [covered with] sheaths....” The verb *mihong* has probably been omitted by the scribe as the line ends with *gnas pa*. However, *Ch*₂ mention sentient beings and do not have an equivalent for *'jig rten*, Skt. *loka*. It is also remarkable that only *Tib* does not mention the Tathāgata’s vision. This could mean that the intention of the translators or editors of *Tib* was to read the text as: “... in the same way, also the tathāgata residing in living beings (*loka*) is perceived as wrapped....” However, in the *TGS*, this would be a rather uncommon formulation and can hardly be based on the Sanskrit original.

(*rāga*), anger (*dveṣa*), misguidedness (*moha*), longing (*trṣṇā*) and ignorance (*avidyā*).”¹⁵⁸

[6B]

“In this [connection] the true nature (*dharmatā*) of a tathāgata, being in the womb (*garbha*)¹⁵⁹ inside the sheaths of [such] defilements [as] desire, anger, misguidedness, longing and ignorance, is designated¹⁶⁰ ‘*sattva*.’ When it has become cool, it is extinct (*nirvṛta*). And because [it is then] completely purified [from] the sheaths of defilements of ignorance,¹⁶¹ [it] becomes a great accumulation of knowledge [in the] realm of sentient beings (*sattvadhātu*).¹⁶² The world with [its] gods (*sadevako lokah*), having perceived that supreme, great accumulation of knowledge [in the] realm of sentient beings speaking like a tathāgata, recognizes¹⁶³ [him] as a tathāgata.¹⁶⁴

¹⁵⁸ *Ch*₁: “In the same way, sons of good [family], with the vision of a buddha I see that [in] all living beings the store of qualities of a tathāgata is found [in] the peels of ignorance, just as the seeds of a fruit are found inside the kernel.” As does *RGV* I.116, *Ch*₁ does not consider living beings but the buddha-qualities (*RGV*: *dharmadhātu*) to be wrapped. *Ch*₂: ... 如來以如來眼見一切有情 ... 煩惱乃至皮膚邊際。: “... the Tathāgata, with the vision of a tathāgata, perceives all sentient beings [with their] defilements ... even to the end of the peels.” The last part of *Ch*₂ is not intelligible. The parallel verse *RGV* I.117c in this passage reads *-kleśa-phalatvagantaragataḥ*. Instead of *antaragata* (*Bth*: *zhugs shing gnas pa*; *Tib*: *kun tu dkris pa*?) *Ch*₂ has possibly read (*pari*-)*antagata* (邊際).

¹⁵⁹ *Tib* alone suggests the following understanding: “In this [connection] the true nature of the tathāgatas, having become the essence inside the sheaths...” or even (Takasaki 1991: 24): 胎児のごとき状態にあるかの如来の体性: “... that real nature of a tathāgata in an embryo-like state.” *sNying por gyur pa* is probably a rendering of Skt. *garbhastha* or *garbhagata* (see *Bth*: ... *dbus*¹ *kyi snying por de bzhin gshegs pa'i chos nyid kyang gnaso* // [¹ for *dbul*]). By the analysis in Hara 1994: n. 4 (1) (though referring for the most part to the *Mahābhārata*) it becomes clear that *garbha*- in these compounds must be understood as “womb.” This meaning should therefore also be accepted for the passage under discussion. See the parallel *RGV* I.117c (*-phalatvagantaragataḥ sambuddhabijānkuraḥ*), where *-gata* is also used to point out the place (and not the state) in which the sprout can be found. See the passages in 8B.4 and 8.5 and also Matsumoto 1994: 503f.

¹⁶⁰ The construction *zhes bya ba'i ming du chags pa* is probably a translation of Skt. *saṃjñotpādītā* (see *Suv*₁ s.v. *ming*). In this way also *Bth*'s *'du shes pa* could be explained by supposing that the verb remained without translation.

¹⁶¹ *Ma rig pa*, Skt. *avidyā*, is considered the root of other defilements (see e.g. *Ybhū* 166.16: *tatra viparyāsamūlam avidyā* /).

¹⁶² The Skt. equivalent for ... *tshogs su gyur pa gang yin pa de ni rnyed pa'o* // and *Bth*: ... *phung po nyid rnyed pa'o* // could be **yo -sambhārabhāvas sa prāptaḥ*, rendered lit. as: “... that which is the [state of] being an accumulation..., is attained.” For *-prāpta* at the end of a compound with an abstract noun before cf. *BHSD* s.v. *-prāpta*. The construction here reminds one of a similar passage in the rendering of the *TGS* verses in *RGV* I.116 concerning the same simile (... *śubhadharmadhātuḥ upaiti ... munirājabhāvam* //): “... the pure *dharmadhātu* becomes king of the *munis*.” *Ch*₂ differs here (see below).

¹⁶³ For *'du shes*, Skt. *saṃjñā*, in this meaning see *BHSD* s.v. *saṃjñā* (5). *Samjñā* comprises mental acts like imagination, identification, ideation or even interpretation. In *'du shes su byed* (**saṃjñām kurvanti*) I do not understand the function of *su* (*Bth* without *su*: *'du shes byed do* //).

¹⁶⁴ The versions differ widely and leave extensive room for interpretation. That the original intention has not been preserved is shown by the great discrepancies between prose and verses. In the following I will first deal with the key terms which appear, before translating and commenting on the varying translations. Finally I will try to sum up the contents.

(1) The definition of *sattva* is only found in the Tibetan and *Ch*₂. In orthodox Buddhist philosophy the term *sattva* is mentioned along with *ātman*. The existence of a separate entity called *sattva* is not admitted. See e.g. ... *sūnyaḥ saṃskārapuñjo 'yam na hi sattvo 'tra vidyate* // ...

evam skandhān upādāya saṃvṛtyā sattva ucyate // iti / (AKBh 466.2, 4 cit.); ... nāstīha sattva ātmā vā dharmās tv ete sahetukāḥ // (AKBh 466.9 cit.); ... ātmadṛṣṭir bhavati sattvadṛṣṭiḥ / nirvīṣeṣo bhavati tīrthikāḥ sārddham // (AKBh 466.14 cit.). The *AAA* even derives *sat-* of *sattva* from the root *sad* meaning “to perish”: *sidan āmakatvāt sattvaḥ (AAA 81.5 with note 1 (the form sidana is attested in Pāli); referring to ASP_{UW} 80.25f.: ... mahatyā āmadṛṣṭyāḥ sattvadṛṣṭyāḥ jīvadṛṣṭyāḥ...).* The definition found in the *TGS* gives a different explanation, by stating that the term *sattva* is used as long as the sheaths (of *kleśas*) have *not* been destroyed. *Sattva* is also considered one of the three *guṇas* which constitute the world in Sāṅkhya philosophical terminology.

(2) The equation “becoming cool” or “having become cool” (*śītibhāva*) = *nirvāṇa* is common (see *BHSD* s.v. *śītibhāva*, *śītibhūta*).

(3) The compound *ye shes chen po 'i tshogs* could be a translation of Skt. **mahājñānasambhāra. Mahat*, as the first member of the compound, could of course also go with *jñāna*.

(4) Apart from the meaning “the whole of living being,” the *RGV* and the *AAN* know *sattvadhātu* also as a specific term for the *dharmakāya* in saṃsāra, as synonyms for *tathāgatagarbha*:

RGVV 40.16ff. (cit. *AAN*): *ayam eva Śāriputra dharmakāyo 'paryantakleśakośakoṭigūdhah saṃsārasrotasā uhyamāno 'navarāgrasamsāragaticyutyupapattiṣu saṃcāran sattvadhātur ity ucyate /*

Śāriputra, that very *dharmakāya*, [as long as it is] covered by myriads of sheaths of defilements, carried away by the stream of saṃsāra, [and] wandering in dying and arising without beginning and end in the existences of saṃsāra, is called *sattvadhātu*.

The *jinagarbha* in an impure state is described as *sattvadhātu* in verse *RGV* 1.47, which is part of the oldest stratum of the text:

*asuddho 'suddhasuddho 'tha suvisuddho yathākramam /
sattvadhātur iti prokto bodhisattvas tathāgataḥ // 47 //*

[Depending on the *jinagarbha* being] impure, [partly] impure and [partly] pure, and completely pure, [it] is called respectively *sattvadhātu*, ‘bodhisattva’ and ‘tathāgata.’

That the term *tathāgatagarbha* is used identically is shown by *RGVV* 21.8ff.: *tatra samalā tathatā yo dhātur avinirmuktakleśakośas tathāgatagarbha ity ucyate /*: “In this [connection] the defiled True Reality is what is called *tathāgatagarbha* [as] the essence not freed from the sheaths of defilements.”

(5) The passage in the other versions: *Ch₁*: “Sons of good [family], that store of a tathāgata is cool, without heat. [It is] a great accumulation of knowledge, the wonderful *nirvāṇa* [and, when purified, it] is designated as ‘tathāgata, honourable one and perfectly awakened one.’” As usual *Ch₁* is considerably shorter than the other versions. The definition of *sattva*, the term *sattvadhātu* and the process of purification do not appear. (The corresponding verse 6.3 of *Ch₁* differs from the prose in this respect.) The repetitive enumeration of *kleśas* and the statement that the *dharmatā* is wrapped in sheaths is also missing. It could constitute an element inserted later by the redactors of *TGS₂*. *Ch₂*: “... in the sheaths of defilements ... there is the nature of the store of a tathāgata.¹ As long as [one] does not know² this, the designation *sattva* [applies]. When [one] is able to bring [the defilements] to rest, [this is] designated as ‘cool’ and named *nirvāṇa*. When [one] is able to remove the defilements of ignorance, then that element of the *sattva* (有情界; *sattvadhātu*) is designated ‘essence of the great accumulation of knowledge’ [and] such a *sattva* is named ‘great accumulation of knowledge’. When [this being called great accumulation of knowledge then] appears [as] a buddha in the world [with the] gods, [it] teaches the subtle Dharma [and] when [the world with the gods] see this, [they] call [that being] ‘tathāgata.’” [¹如來藏性: in light of the Tibetan (*tathāgatadharmatā*) an emendation to 如來法性 should be worth considering; ² Should 不悟 be emended according to verse 6.3a (不壞): “As long as [one] does not destroy these [sheaths],...”? The phrase 不悟 has no equivalent in the Tibetan prose.]

A possible translation of *Ch₂* has to deal with many factors of uncertainty. As does *Ch₁*, also *Ch₂* has 如來藏(性) (contrary to *dharmatā* of the Tibetan). Leaving aside an emendation to 如來法性, one reason for adding 性 to the compound might be that Amoghavajra tried to give a quasi-etymology for the term *sat-tva* by defining it as “where the nature (性 for Skt. *-tva*) of the store of a tathāgata can be found (有 for Skt. *sat* from the root *as*).” In this case, the variant 有性 rather than 有情 should be considered as original (in contrast to the verse) when defining the term *sattva*. *Ch₂* seems to use the term *sattvadhātu* as a designation for the unpurified true nature of living beings. Once purified, this same element is named “essence of the great accumulation of knowledge” (大智聚體). The characterization of *sattva* (*Tib*: *sattvadhātu*) as “supreme” (*dam pa*;

Sons of good family, in this [connection] the Tathāgata perceives that [all sentient beings]¹⁶⁵ are like the [seed containing a sprout], and then propounds the matter to the bodhisattva-*mahāsattvas* in order that [they] might realize the tathāgata-knowledge [within themselves].”¹⁶⁵

mchog) could correspond to 彼之有情. *Ch*₂ has probably interpreted *para* in the sense of “another” or even misread *para* instead of *vara*. The phraseology 是則名爲 does not correspond to the Tibetan *nyed pa'o; ji lta ba de bzhin du* (*Tib*) or *ci ltar khong du chud pa de bzhin du* (*Bth*) remain without counterpart in *Ch*₂.

(7) *Bth*: ... *nyon mongs pa'i mdzod kyi¹ dbus² kyi snying por de bzhin gshogs pa'i chos nyid kyang gnaso // de la gang sems can du 'du shes pa zhi bar gyur na : ma rig pa'i nyon mongs pa'i mdzod : yongsu sbyangs pa'i sems can kyi khamis de yeshes chen po'i phung po nyid nyed pa'o // de sems can mchog ste : yeshes kyi phung po chen po'o // ci ltar khong du chud pa de bzhin du smra ste : lha dang : 'jig rten du bcas pas mthong nas / de bzhin gshogs pa zhes 'du shes byed do //*
[¹ for *kyis*; ² for *dbul*].

Now, the true nature of a tathāgata is found as the essence, [being in] the center of the sheaths of defilements.... When in this [connection a being] which is called *sattva* has calmed down, the essence of the *sattva* (*sattvadhātu*), completely purified [from] the sheaths of defilements of ignorance, becomes a great accumulation of knowledge. Such [a being] is a supreme *sattva*, [as the] accumulation of knowledge is great. [This supreme *sattva*] speaks as having understood [the Dharma], and after the world with the gods has seen [this, they therefore] recognize [this being] as ‘tathāgata.’

Bth combines the definition of *sattva* with the following sentence and does not leave room for an identification of the *dharmatā* with *sattva*. The term *nirvāṇa* does not appear. The unusual *ji lta ba de bzhin du* (6B.7) of *Tib* could represent a shortened form of *ci ltar khong du chud pa de bzhin du* as it is found in *Bth*. The same wording appears e.g. in *KP* §2, where it is said about the bodhisattva: *yathāśrutāṃś ca dharmān yathāparyāptān parebhyo vistareṇa samprakāśayati / = ... ji ltar khong du chud pa*

(8) In light of the other versions of *TGS*₂, *Tib* shows the following characteristics: The equation “defiled *dharmatā* = *sattva*” is only found in the prose of *Tib*. Even verse 6.3 of *Tib* does not confirm this explicitly. *Ch*₂ seems to see different categories in the *sattva* itself as an ordinary living being and in the element or nature of this living being (*sattvadhātu*), and thus avoids a direct equation. The genitive relation between *sattvadhātu* and the “great accumulation of knowledge” in *Tib* is not confirmed by the other two versions where it is said that the *sattvadhātu* becomes (the essence of) a great accumulation of knowledge. However, in *Tib* it is hard to understand *sattvadhātu* as anything else than “realm of sentient being.” The interpretation of *sattvadhātu* as “element, essence” is supported by *RGV* I.116ab, where the term *śubhadharmadhātu* is used instead (*sattveṣv ... śubhadharmadhātuḥ*). Within the reproduced verses of the *TGS* in the *RGV* the term *dharmadhātu* appears only once. The second mention of *sattvadhātu* in 6B.6 is probably not based on the Skt. text since *Bth* (*sems can*) and *Ch*₂ (有情) simply read *sattva*.

(9) The content of the section in *TGS*₂ thus focuses on the following four main points:

- a. The definition of the term *sattva* as characterizing the true nature of living being enclosed by defilements.
- b. The statement that this nature has become cool and extinct.
- c. Though already extinct, the external purification from the defilements leads to the nomination “great accumulation of knowledge.” This stage is associated with the attribute “supreme” (*dam pa; mchog*).
- d. Only when teaching the Dharma to other sentient beings, is such a “supreme being” granted the nomination “tathāgata” by them.

¹⁶⁵ The passage in *Ch*₂ seems corrupt: “Sons of good [family], when there the Tathāgata, Honourable One and Perfectly Awakened One is seen, [this same Tathāgata] makes all bodhisattva-*mahāsattvas* aware of [their own] tathāgata-knowledge so that [they] may disclose [it to sentient beings].” The interpretation of the Tathāgata as the object of the act of seeing differs from all other versions. In the last part, *artha*, being the “matter” to be exhibited according to *Ch*₁ and the Tibetan, has been understood by Amoghavajra as indicating finality (令顯現故).

[6C]

Then at that time the Exalted One uttered these verses:

- [6.1] “Just as all the fruits of cane have a cane sprout inside [their seeds], and [just as a sprout] is also in all the [fruits of] palmyra palms and rose apple trees: when the result,¹⁶⁶ [which is already perfectly] contained within [the fruit’s outer peel,] is made to germinate, [a great tree will] grow.”¹⁶⁷
- [6.2] “In the same way also the Master of the Dharma, the Leader,¹⁶⁸ perceives with the supreme, uncontaminated vision of a buddha¹⁶⁹ that in all sentient beings without exception—similarly to the cane seed—there is the body of a *sugata*.”¹⁷⁰
- [6.3] “The [being in the state when] the sheaths [of defilements]¹⁷¹ have not been destroyed is called ‘*sattva*.’ Even though [the essence of this *sattva*, namely the body of a *sugata*,] dwells [hidden] in ignorance, there is no illusory imagining (*manyānā*). [It] dwells in absorption (*samādhi*), is completely calm and there is no motion whatsoever.”¹⁷²

¹⁶⁶ *Tib*: ‘*bras bu* corresponds in *Bth* with *don*. The Skt. was probably *kārya* (cf. *MVy* 4630, 6977/78, 7198). The compound *yod pa’i ’bras bu* in *Tib* thus represents Skt. *satkārya*, a central term in the teaching of the Sāṅkhya.

¹⁶⁷ The translations show considerable differences in this verse: *Ch*₁ follows widely the first section of its own prose (see above). *Ch*₂: “Just as in a cane seed the tree—[manifesting itself as] a cane sprout [etc.]—in its entirety can be found; [and just as] a rose apple tree [which already completely] exists in the root (!) grows again once its seed is planted [in the earth],...” *Ch*₂ differs from its prose and argues in perfect accordance with the *satkārya* doctrine. The character 根, Skt. **mūla*, does not have any equivalent in the other translations (variant reading of *tāla*?). *Bth* differs particularly in the last two pādas: ‘*dzam bu kun kyī*¹ *dbus na yang ni yod : de btab*² *bas ni don kyang ’byung bar ’gyur* : [¹ for *kyis*; ² for *btang*, see prose]: “Also in all rose apples [it] exists. By planting it, the result[, which is already completely contained in the seed,] emerges.”

¹⁶⁸ The terms *dharmesvara* and (*vi*)*nāyaka* also designate the Buddha. *Ch*_{1,2} are without these designations. *Ch*₂ instead: 我見悉無餘: “I see all [sentient beings] without exception (**aśeṣa*).” Cf. *aśeṣa* – *dharmesvara*.

¹⁶⁹ The compound could be **anāsravabuddhacakṣurvara*, which was rendered by *Tib* without altering the position of its members. In *Bth* the elements *-buddha-* and *-vara* are missing. *Ch*₂ corresponds to *Tib* (無漏最勝佛眼觀). For *anāsrava* cf. *BHSD* (s.v. *āsrava*), where *lokottara* is quoted as an equivalent.

¹⁷⁰ Instead of “body of a *sugata*” *Ch*₁ reads 如來藏; *Ch*₂: 如來體. The verse in *Ch*₁: “The Tathāgata, [with his] uncontaminated vision, perceives the store of a tathāgata in the body of all living beings—just like the kernel in all fruits.”

¹⁷¹ With *sbubs* (*Bth*: *mdzod*), *kośa*, *Tib* most probably does not mean the unperishable “store” of a Tathāgata as Takasaki (不壞なる庫藏; 1981: 25) and also Kagawa (不壞なる藏 [壞 is to be emended to 壞]; 1962: 13) understand it. *Tib* uses the term *sbubs* throughout the *TGS* another 17 times. In all of those cases it designates the sheaths of defilements covering living beings. *Tib* renders *kośa* with *mdzod* when used in a positive meaning as “treasure” in the fifth illustration. *Ch*₂: “[When] the imperishable is concealed [in the sheaths of defilements, it] is called ‘*sattva*’” (不壞是藏名有情).

¹⁷² (1) Pāda a of *Bth* should probably be emended to ... *thadad mdzod ma yin* (instead of *pa yin*). *Tha dad* corresponds to *Tib*: *bshig* and could render a form of the Skt. root *bhid*. The *gter tsheg* following *sems can* takes the position of *brjod* in *Tib* and could symbolize an abbreviation for Skt. *iti*, *uktvā* or something similar.

(2) Instead of *amanyānā* (*rlom sems med*), *Bth* speaks in pāda b of *mkhyen*, probably a form of the Skt. root *jñā*. Although the combination *rlom sems med* – *g.yo ba ma yin* (*aniñjanā*) is common (*BHSD* s.v. *iñjana*; *manyānā*, °*na*) and appears also in 5.1, in this case *Bth* has probably preserved a wording closer to the original, for also *Ch*_{1,2} show 智 (**jñāna*) instead of *amanyānā*. With the term *jñāna*, this verse reminds of **mahājñānasambhāra* in the prose of 6B. The pāda

[6.4] “Thinking:

‘How may these sentient beings become awakened—just as a great tree has grown from a seed—and [thus become] refuges (*śaraṇa*) for the world with [its] gods?’

I speak the Dharma in order to completely purify [sentient beings].”¹⁷³

[7 The simile of a tathāgata image wrapped in rotten rags]

[7A]

“Sons of good family, again it is like the example of a poor man¹⁷⁴ [who] has a tathāgata image the size of the palm of a hand [and] made of seven kinds of jewels.¹⁷⁵ It then so happened that the poor man wished to cross a [dangerous] wilderness¹⁷⁶ carrying the tathāgata image [with him]. And in order that it might not be discovered by anybody else, or stolen by robbers, he then wrapped it in some rotten, putrid rags.¹⁷⁷

Then the man died¹⁷⁸ owing to some calamity in that same wilderness, and his tathāgata image, made of jewels [and] wrapped in rotten rags, then

according to *Bth* (*mi shes pa'i dbusu gnas par mkhyen //*): “Knowing that [this body of a *sugata*] dwells in ignorance,...” In *Ch*₂ the term *avidyā*, testified in all other translations, is not mentioned. Instead of it we find 不異, Skt. **ananya*. This variant could result from the graphic similarity of *ananya* and *avidyā*. *Ch*₂: 於中有智而不異: “Within [the sheaths?] is the knowledge, not different [from myself?].”

(3) Pādas c and d in *Ch*₂: “[This knowledge] peacefully dwells [in] absorption (定; *samādhi*), is placed [in] tranquility. Further [it is] without motion (*aniñjanā*), there is nothing to be attained.” For a similar passage cf. *SP* 161.10f. = VII.10: *cittam pi te sāntagatam susaṁsthītam aniñyabhūtam sada aprakampyam / vikṣepu naivāsti kadācit tava¹ atyantaśāntasthītu tvam anāsravaḥ //* [¹ *tava* metrically impossible].

The whole verse in *Ch*₁: “Ignorance covers the store of a buddha. You should trustfully know, that [it] is furnished with absorption and knowledge [and that] there is nothing [by which it] could be destroyed!” As usual, *Ch*₁ deviates also here considerably from the other translations. Just as in the prose section, the term *sattva* does not appear.

¹⁷³ The pāda concerning the refuge runs as follows in *Ch*₂: 當為世間之所依: “... and then become supports [for] the world.” The gods are not mentioned; 所依 represents **āśraya* rather than *śaraṇa*. *Ch*₁: “Therefore I teach the Dharma [and] disclose that store of a tathāgata [for living beings so that they may] quickly accomplish the unsurpassable path, just as a fruit becomes a king of trees.”

¹⁷⁴ Though the man possesses a precious tathāgata image, he is described as poor. This characterization seems irrelevant for the illustration and is not found in *Ch*₁.

¹⁷⁵ *Rin po che sna bdun*, Skt. *saptaratna*, appears often in Buddhist literature (cf. *BHSD* s.v. *ratna* (2); *Suv*₁ s.v. *rin po che*). It comprises the materials *suvarṇa*, *rūpya*, *muktā*, *vaidūrya*, *sphaṭika*, *musāragalva* and *lohītikā* (acc. to *BHSD*). *Ch*₂ reads *sarvaratna* (一切寶). *Ch*₁ speaks of an image of pure gold (真金像) and gives no measure.

¹⁷⁶ For ‘*brog dgon*, *MVy* 2992 gives the equivalent *kāntāra*: “... wilderness, ... a difficult road through a forest,...” (*MW*). The Chinese translation (險路) focuses on the second meaning.

¹⁷⁷ *Ch*₁: ... 行詣他國，經由險路，懼遭劫奪，裹以弊物，令無識者。: “... [the man], going to another country, would pass a risky path. Afraid to encounter robbery [he] would wrap [the image] with ragged materials so that nobody [could] recognize [it].” The last section in *Ch*₂: “Fearing the robbery of the [image he] would then take rotten, ragged silk and wrap his image with [it] so that nobody would suspect [it there].” *Ch*₂ then continues with the appellation “Sons of good [family],....”

¹⁷⁸ (1) *Tib* translates ‘*chi ba'i dus byas par ma gyur* (but *Bth*: *shi bar gyur nas*). Should *Tib* be interpreted as “not to reach [his predetermined] time of dying”? Cf. Skt. *kālam karoti* for “dying.” The Chinese versions speak of a sudden death: 忽便命終 (*Ch*₁); 忽然命終 (*Ch*₂).

(2) The meaning of *dar nad* or *dor nod* in *Bth* instead of *nyes pa* is not clear. However, *nad* implies an illness leading to the man’s death.

lay around on the footpath.¹⁷⁹ [But] travelers,¹⁸⁰ unaware [of the precious tathāgata image in the rags], repeatedly stepped over [it]¹⁸¹ and passed by. And [they would] even point [at it] as something disgusting [and question]: ‘Where has the wind brought this wrapped bundle of rotten, putrid rags from?’¹⁸² And a divinity dwelling in the wilderness, having looked [at the situation] with divine vision, would show [it to] some people and direct [them]:

‘O men, [here] inside this bundle of rags is a tathāgata image made of jewels, worthy to be paid homage by all worlds. So [you] should open [it]!’¹⁸³

[7B]

“Sons of good family, in the same way also the Tathāgata perceives that all sentient beings are wrapped in the wrappings of defilements and that [they are like something] disgusting, wandering around for ages throughout the wilderness of saṃsāra.¹⁸⁴ And, sons of good family, [the Tathāgata]

¹⁷⁹ (1) I rendered *rdog lam* simply as “footpath” without having been able to locate other occurrences of this compound. *Bth* has just *lam*; see Kagawa 1962: 14 (路傍) and Takasaki 1981: 25 (道端): “wayside.”

(2) “To lay around” for *'phyan pa*, Skt. *bhramati*; in 7B.3 appears another form of the root *bhram* which refers to saṃsāra: *kun tu 'khyam pa* (cf. *MVy* 5108).

(3) *Ch₁* (including a part of the following passage): 於是金像棄捐曠野，行人踐踏，咸謂不淨。：“There the golden image, [which] has been abandoned in the wilderness, is considered as unpure by all the wanderers trampling upon [it].” *Ch₂*: 如來寶像在於臭穢、弊惡帛中，棄擲于地，流轉曠野。：“The precious image of the Tathāgata remains in the rotten, ragged silk thrown on the ground [and] wanders around [in] the wilderness.”

¹⁸⁰ *Dron po* or *'gron po* (*P₂S*): “traveler.” My translation is in accordance with *Jā*, who conceives of *'gron pa* as a synonym for *'grod pa*, having the meaning “to go, to travel.” *BCA₁* s.v. *'dron pa* gives as Skt. equivalents “1, *pathi vartin* (N[arthang]: *'gron pa*). 2, *sārtha* [‘caravan’].” Only the first meaning is confirmed by the Chinese (行人; 行路之人), by *Bth* (*mi long ba*, which should be emended to *mi song ba*, *mi 'dong ba* or even *mi 'ong ba*), and the parallel verse *RGV* I.118d: *adhvaga*.

¹⁸¹ I try to render the repetition *'goms shing 'goms* by adding “repeatedly.” *Bth* reads *'gong mchong*. *Tshig mdzod* denotes for *'gong ba*: (*rnying*) ... (4) *smad pa* ... [“to despise”]. *Gong mchong* could accordingly be translated as “to jump over contemptuously.”

¹⁸² In *Bth* (*ral ma rul pa dam pos dkris pa rlung gi ded 'khyam¹ pa 'di ga las byung zhes* [¹ for *'khyab*]), a second verb *byung* and the position of *'di* imply the following translation: “From where appeared (*byung*) this bundle wrapped ... [which] is driven by the wind?” I understand *ded* as the perfect form of *'ded pa*. The passage in *Ch₂*: “[But] people [who] are walking along the path come and go, pass, trample upon, jump over [the bundle and] do not know that there is a tathāgata image inside. And because the [image] is wrapped in rotten silk having been thrown on the ground, all [consider it something] disgusting. How could [they] have the idea that [it is] a buddha?”

¹⁸³ In *Ch₁* the divinity is not mentioned directly (得天眼者). This agrees with the parallel *RGV* I.120b: *divyanayana*. In the prose of *Ch₁*, contrary to its own verse 7.2, the being with divine vision is not directing others to open the bundle: 得天眼者見弊物中有真金像，即爲出之，一切禮敬。：“Somebody with divine vision sees that in the ragged materials there is an image of pure gold and immediately takes [the image] out for [other living beings so that they] all pay homage [to it].” *Ch₂* speaks of several divinities (諸天). The directive runs as follows: “O men, in this rotten silk here is a tathāgata image. Unwrap [it] quickly! All worlds shall pay homage [to it]!”

¹⁸⁴ (1) The analogies wilderness/saṃsāra and wrappings/defilements are missing in *Bth* and *Ch₁*, but appear in *RGV* I.120: *saṃsāravartmo*-; ... *kleśavipūtiṣṭra*-. Cf. *Ch₂*: 如彼臭穢、故帛煩惱：“defilements like that rotten, ragged silk.”

(2) As in *Ch₂*, the verb “to perceive” appears in *Bth* just once in the first two sections of 7B. The second *mthong* in *Tib* was probably inserted by the translators of *Tib* in order to make the syntax more transparent.

perceives that also within sentient beings [who] are wrapped in the wrappings of various defilements—and even though [they] may have come into existence as animals—¹⁸⁵there is the body of a tathāgata of the same [kind] as my own.¹⁸⁶

Sons of good family,

‘How does the mental vision of a tathāgata (*tathāgatajñānadarśana*) [in all sentient beings] become free and completely purified from impurities so that [sentient beings] become worthy of the homage of all worlds, as I am now?’

Thus thinking, the Tathāgata teaches in this [connection] the Dharma to all bodhisattvas in order to cause [such beings] to become free from the wrappings of defilements [in which they] are wrapped.”¹⁸⁷

[7C]

Then at that time the Exalted One uttered these verses:

[7.1] “It is as if a *sugata* image were wrapped in putrid, disgusting [materials]—made of jewels [and yet] wrapped in rags—[and] had been left¹⁸⁸ on a path and lay around [there].”¹⁸⁹

[7.2] “And the divinity, having perceived it with divine vision, had said to some [people]:

‘Here is a tathāgata [image made of] jewels. Open quickly this bundle of rags!’¹⁹⁰

[7.3] “My [vision] is like this divinity’s vision:¹⁹¹ with that [vision I] see that without exception all these sentient beings, wrapped in the wrappings of

¹⁸⁵ Cf. *RGV* 15.11f., which is probably based on this passage of the *TGS*. The passage here, its parallel verses *RGV* I.119, 120, and *RGV* 15.11f. are, in the early *tathāgatagarbha* teaching, the only passages which explicitly state that animals have buddha-nature: ... *lokottarayā prajñayā sarvasatvेषु antaśas tiryagyonigateषु api tathāgatagarbhāstūvadārśanāt*.... In *Ch*₁ this passage does not appear. *Ch*₂: ... 受於無量傍生之身。: “... [perceives that all sentient beings] attain innumerable bodies as animals.”

¹⁸⁶ *Ci* in *nga ci 'dra* seems redundant but is also found in *Bth*. It appears again in *Bth* 7B.7 and could well be an archaic formulation. 7B in *Ch*₁ from the beginning: “In the same way, sons of good [family], I see that living beings [due to their] various defilements circulate for a long time (長夜; **dīrgharātra*), in innumerable [re]births and deaths. [And I see that yet] the wonderful store of a tathāgata dwells within their bodies, exalted [and] pure, not different from myself.”

¹⁸⁷ Both *Bth* and *Ch*₂ place the part of the sentence expressing finality before the direct speech. Neither the Tibetan nor *Ch*₂ shows clearly if the purification of the bodhisattvas or of living beings is meant. In *RGV* I.120d the process of liberation (... *vimuktyai*) refers to *buddhadhātu*. In *Ch*₁ the bodhisattvas do not appear. The last part is different from all other translations and is not found in the verse section of *Ch*₁: “Therefore the Buddha teaches the Dharma for living beings, removes [their] defilements, purifies [their] tathāgata-knowledge [and] increasingly (轉復) guides all worlds.”

¹⁸⁸ For *bor te* see the parallel verses *RGV* I.118, 120: *ujjhita*.

¹⁸⁹ *Ch*₁ follows its own prose: “It is as if somebody carrying a golden image went to another country and would [therefore] wrap [the image] with ragged, rotten materials, and [the image] would [then] have been abandoned and lay in the wilderness.” In *Ch*₂ the image is left at a “risky [and] bad place [in] a wilderness” (曠野險惡處).

¹⁹⁰ (1) *Su* in 7.2a functions as a metric expletive (see Hahn 1985: 206).

(2) As in its prose, *Ch*₁ does not mention a divinity. The direct speech runs: 去穢現真像 一切大歡喜: “Removing the rotten [materials, you will] reveal a pure [golden] image [so that] everybody [will] greatly rejoice!” *Ch*₂ mentions several divinities and adds that the image should be venerated (恭敬). Both Tibetan translations have *Iha des* though the divinity has not been mentioned in the verse before.

defilements, are suffering severely [and] are continuously tormented by [this] suffering of saṃsāra.”¹⁹²

[7.4] “I perceive that inside the wrappings [consisting of] defilements the body of a victorious one is firmly established,¹⁹³ that that [body] is without motion and change, and that yet there is nobody setting that [body] free.”¹⁹⁴

[7.5] “Having seen [this], I then urged [the bodhisattvas]:¹⁹⁵
‘[O you] who have entered excellent awakening, listen! Thus [is] the essential law (*dharmatā*) [regarding] sentient beings: here [within each sentient being] always dwells a victorious one, wrapped around [with defilements].”¹⁹⁶

[7.6] “When the *sugata*-knowledge [within] has been set free and all defilements are pacified, then this [sentient being] is called

¹⁹¹ *Tib* has two particles: *de bzhin* and *'di 'dra ba*. The fact that the three other versions only show one such particle, and instead *Bth* and *Ch₂* mention the act of seeing a second time (*mithong ba*; 見), could be explained by assuming that *Tib* has misread a form of the root *dr̥ś* “to see” as *īdr̥śa* or (*e*)*tād̥r̥śa*. For an alternative explanation cp. n. 196 (1).

¹⁹² The versions could be understood in the following way: *Bth*: “In the same way, with my supernatural vision I see living beings. I always see in the most excellent way [that they] are concealed by masses¹ of defilements [and that they] are also troubled by the suffering of saṃsāra.” [¹ *gong bur* to be emended to *gong bus*; cf. *Bth* 7B.3; 5.] *Ch₁*: “My divine vision is also like this: [with it I] see these living beings wrapped in defilements [and] bad deeds, [and I see how they become] born and die accompanied by lots of suffering.” *Ch₂*: “With [my] divine vision I see like this: I see [how] all living beings are subject to the wrappings of the silk of defilements [and how they] excessively experience sorrow and the suffering of saṃsāra.”

¹⁹³ Instead of *mnyam par bzhag gyur* (Skt. **samāhita*, **samādhigata*), *Bth* simply has *gnas*. *Ch₂* mentions in the same pāda the *paryaṅka* position of the tathāgata-body (如來體).

¹⁹⁴ (1) The act of perceiving comprises the whole content of the verse. It is not mentioned in *Bth*.

(2) *Bth* shows the phrase *mi spyod* instead of *mi 'gyur*. This could be a rendering of Skt. *acara* or *avicāra*; for *acāra* the *BHSD* gives the meaning “unchanging, constant.”

(3) The verse in *Ch₁*: “Further [I see that with] living beings, in the middle of the dirt of ignorance [there is] tathāgatahood without motion, [and that yet] there is nobody who could remove [the dirt].”

¹⁹⁵ The perfect form of *'debs* is probably chosen because what is described in the following verse 7.6 is thought to happen *after* the urging. For *skul ma btab*, probably a causative form of the root (*saṃ-*)*cad*, *Ch₂* employs 驚悟, “to alarm, to shake up”; *Ch₁* has simply 說. Different and obviously incomplete is *Bth* with *'grol bar bya* instead: “[in order] to cause [the buddha bodies] to become free [he says]....” This statement is, however, also part of the corresponding passage in the prose of 7B. As is said explicitly in *Ch₁* the urging is directed towards the bodhisattvas.

¹⁹⁶ (1) My translation follows *Bth* and *Ch₂* (常) in attaching *rtag* of pāda c to pāda d, which seems to have been its original position. The translation of Takasaki 1981: 27 includes *rtag* in the statement of pāda c. This must have been the intention of the Tibetan translator(s) or reviser(s): 衆生たちの本性は常にこのようである。: “The true nature of living beings is always thus.”

(2) For a phraseologically and syntactically similar construction cf. the *Samādhirājasūtra* (Régamey 1990: 53, XXIII.17): *evaṃ saṃbhava buddhānām / lokanāthāna īdr̥śah / na jātu kenacic chakyaṃ / paśyitum ...* (Tib.: *de ltar sangs rgyas 'byung 'gyur te / 'jig rten mgon po 'i de 'dra bas / sus kyang ... nam yang mithong bar mi nus so //*); Régamey’s translation (p. 90): “Such is the nature of the Buddhas, Rulers of the World. Nobody can perceive them....”

(3) Instead of *dharmatā* *Ch₂* has just 法. *Ch₂*’s statement that the buddha is found within fears (怖畏 for *bhaya*, *trāsa* or so on) must be based on an erroneous variant reading of the Skt., on which (*yongs su*) *dkris pa* and *'di na* (*Bth*: *de na*) were based.

(4) *Ch₁*: “As the Buddha has seen thus, [he] teaches for the bodhisattvas: ‘Masses of defilements—the bad deeds—cover the body of a victorious one [within living beings].”

‘awakened’ (*buddha*) and the hearts of gods and humans are full of joy.’¹⁹⁷

[8 The simile of the future universal emperor in the womb of a poor, depressed woman]

[8A]

“Sons of good family, again it is like the example of a woman without a protector (*anāthabhūta*), of unsightly complexion, having a bad smell, disgusting, frightening, ugly and like a demoness (*piśāci*), [and this woman] had taken up residence in a poorhouse.¹⁹⁸ While staying there she had become pregnant. And though the life that had entered into her womb¹⁹⁹ was such as to be destined to reign as a world emperor,²⁰⁰ the woman would neither question herself with reference to the sentient being existing in her womb ‘Of what kind is this life [that] has entered my womb?’, nor would she [even] question herself in that [situation]: ‘Has [some life] entered my womb or not?’²⁰¹ Rather, thinking herself poor, [she would be] depressed,

¹⁹⁷ (1) The syntactical construction could derive from Skt. *yadā ... tadā...*; see also *Ch*₂ (彼時 ... 是故...).

(2) Pāda a of *Ch*₂: 即解彼已現佛智: “When this [buddha within] has been set free and [one has] manifested the buddha knowledge,....” In the last pāda *Ch*₂ mentions apart from the joy also the venerating activity (供養) of gods and humans. *Ch*₁: “Purify diligently [the buddha within and] remove [the defilements]; bring forth the tathāgata-knowledge! [Then you will] be venerated by all gods, humans, dragons (*nāga*), hungry ghosts (*preta*) and snake-gods (*yakṣa*)!”

¹⁹⁸ *Bud med mgon med par gyur pa*, Skt. **anāthabhūtā stri*, indicates a female without any male family members (cf. *Ch*₂: “orphan woman”; 孤獨女人) who could be in charge of her “protection.” Characteristic for the Indian concept of women in need of protection is *Manu* IX.3:

pitā rakṣati kaumāre bhartā rakṣati yauvane /

rakṣanti sthavire putrā na stri svātantryam arhati // (cf. also V.147ff.)

What exactly *mgon med pa* ‘i *khang pa*, Skt. **anāthasālā-vasatha*, stands for, is not very clear. In *Paṭi* I 266.30ff. compassionate people are said to bring bandages to an *anāthasālā* so that the inhabitants could bandage their open wounds (probably inflicted through punishments). An *anāthasālā* could be an assembly point for people at the edge of the society without any family ties. *Ch*₂ renders it as a (socially) low, run-down house (下劣、弊惡之家). The meaning “run-down” of *anātha* is also prevalent in the description of a *vihāra* (see Couvreur 1957: 317). My translation “poorhouse” might therefore not cover the complete range of functions and notions of such a place in India.

¹⁹⁹ The term *sattva* seems common in ancient Indian literature to designate the entity entering the womb and becoming the embryo (cf. e.g. the quotations in Hillebrandt 1906: 183; also *Divy* 98.20ff.: ... *sattvo ... kuṣṣim avakrāntaḥ* /). Instead of “to enter” (*zhugs* for **avakrāmatī*?) *Bth* has here and in 8A.6 *skyes* from *skye*: “to arise.”

²⁰⁰ *rGyal srid byed pa* is probably based on Skt. *rājyam karoti* or *kārayati* (see *Udr*₁ s.v. *rgyal srid*); *Bth* has simply *rgyal po*. For the characteristics of a “world emperor” (*cakravartin*) see *EncBuddh* s.v. *cakravartin*.

²⁰¹ (1) In *Bth* the question which the woman does not ask runs as follows: “What kind of life has arisen in my womb, has entered my womb?” Instead of the phrase *yid la mi byed* which appears after each of the two questions in *Tib*, *Bth* states: “... [this she] does not think, [this she] does not consider, [this] does not enter [into her] consciousness.” (... *zhes mi sems : yid la mi byed : der 'du shes mi 'jug go* //). Whereas *Bth* obviously combines the second *'jug pa* with *'du shes* (*saṃjñā*), which is not attested in *Tib*, *Tib* includes it in the second question (*sam / ma zhugs*), referring to the womb. *Mi sems* in *Bth* should have its equivalent in one of the two *yid la mi byed* of *Tib*. The second question, pertaining to whether life has entered the woman’s womb or not is only attested for *Tib*. However, in verse 8.3 it comes up in both *Tib* and *Bth*.

(2) The passage in *Ch*₂: “By chance [she then] had intercourse [and] would become pregnant in [her] belly; [and] this [would be] an embryo [destined] to necessarily function as a world emperor-

[and] would think thoughts [like] ‘[I am] inferior and weak,’ and would pass the time staying in the poorhouse as somebody of unsightly complexion and bad smell.”²⁰²

[8B]

“Sons of good family, in the same way also all sentient beings [think of themselves as] unprotected and are tormented by the suffering of saṃsāra. [They, too,] stay in a poorhouse: the places of [re]birth in the states of being.²⁰³ Then, though the element of a tathāgata has entered into sentient beings and is present within, those sentient beings do not realize [it].²⁰⁴

king. And yet, even though this woman were pregnant, [she] would not at all have thoughts such as [appropriate for the mother of an emperor]:....” or “...were pregnant, [she] would not at all have such thoughts:....” The second alternative is in accordance with the Tibetan. However, the question itself, which in the Tibetan follows directly after, does only appear at the end of 8A: “And [she] would not know for certain: ‘What kind of human is it that has arisen in my belly?’” (亦不定知是何人類生於我腹。).

²⁰² (1) The Skt. on which *Tib* is based could be ... (na) anyatra sã daridrācintāṃ līnahīna-...-cintāṃ ca anu(vi)cintayet durvarṇadurgandhatayā ca... (cf. n. 136). Instead of the triplet *zhum pa dang / dman pa dang / kho ru chung ba* the text in *Bth* shows *ngan pa dang : nyon mongs pa dang : mi dge ba*; *Ch₂*: 匱、下劣之心... 羸劣, *dMan pa* should correspond with *ngan pa* (*hīna*; cf. 8.5d; *Ch₂*: 下劣). *Zhum pa* (Skt. *dīna, nīca, līna, viṣāda, sãmkoca* or something similar) does not correspond with *Bth*: *nyon mongs pa* (probably for *vyasana*; *Ch₂*: 匱) nor with *Bth*: *mi dge ba*. Difficult is also *kho ru chung ba*, for which the dictionaries do not have entries. It could correspond with *Ch₂*: 羸劣 (**durbala* = *stobs chung ba* or *nyam(s) chung ba*). However, also in this case *Bth* (*mi dge ba*) is different. Two compounds in a row with the same final member to which the prior members of the compounds are referring, in the form *ax bedx*, are not uncommon in Buddhist Hybrid Sanskrit. The first compound **daridrācintā* I have taken to be an *iti*-compound, similar to the one in n. 136. The second compound **līna-hīna-durbala-cintā* cannot be analyzed in this sense, as *līna* usually describes the temper rather than the content of a thought (cf. *RGV* I.157a: *līnaṃ cittam*; *BHSD* s.v. *līna*); for *hīna* cf. 8.5d.

(2) The Skt. for *dri mi zhim pa nyid kyis* could have been something like *durgandhatvena*. Therefore my translation: “as somebody of ... bad smell.” *Bth* simply has *dri mi zhim pa*.

(3) The passage in *Ch₂*: “[She] would only think [herself] poor, deficient [and] inferior. Following the weakness of her mind [she] would continuously have this thought: ‘I am ill-looking.’ [She] would pass [her] time dwelling in a low, run-down house. And [she] would not know for certain... (see above).” All of 8A in *Ch₁*: “And again, sons of good [family], it is like a poor, low [and] ill-looking woman, hated by everyone, and yet [she] would carry a precious child [in her belly] who later would be a noble king, ruling the four worlds. [Yet] this person would not know [about it and] pass the time thinking continuously that [also] the child [will be] inferior [and] of low birth.”

²⁰³ (1) “Unprotected,” *anātha*, is rendered by *Ch₂* as “without master, without support” (無主, 無依).

(2) *Srid par skye ba’i gnas* possibly for Skt. *bhavopapatty-āyatana*; *bhava* is synonymous with saṃsāra. *Ch₂*: 生三有中: “[re]born in the three states of being”; cf. the corresponding passage *RGV* I.122a: *anāthasāleva bhavopapattiḥ*.

(3) The passage in *Ch₁*: “In the same way, sons of good [family], the Tathāgata observes [how] all living beings wander around in saṃsāra [and] experience the poison of all [kinds] of suffering.”

²⁰⁴ (1) Instead of *gotra* or *kula* (*Tib*: *rigs*) *Bth* and *Ch₂* have *dhātu* (*kham*s; 界). The passage is cited in *RGV* 72.11–12 and reads *dhātu: tatra ca sattve sattve tathāgatadhātur utpanno garbhagataḥ saṃvidyate na ca te sattvā budhyanta iti* /. For a discussion of the meaning of *dhātu* here see section A 3.1. *Dhātu* is also attested for the parallel pāda *RGV* I.121c. I have no definite idea if and why the translators or revisers of *Tib* preferred *rigs* to *kham*s, or if and why already one strand of the Indian tradition replaced originally *dhātu* with *gotra*. One would also expect the character 性 rather than 界 (*Ch₂*) in the common translation 如來性 for *tathāgatadhātu*, to express the buddha essence in living beings. A possible reason for a deliberate alteration from *dhātu* to *gotra* (or *kham*s to *rigs* in the Tibetan tradition), however, could be the classification system

Sons of good family, in order that sentient beings do not despise themselves, the Tathāgata in this [connection] teaches the Dharma with the [following] words:

‘Sons of good family, apply energy without giving in to despondency!’²⁰⁵ It will happen that one day the tathāgata [who has] entered [and] is present within you will become manifest.²⁰⁶ Then you will be designated ‘bodhisattva,’ rather than ‘[ordinary] sentient being (*sattva*).’ [And] again

established later in the *RGVV* (cf. section A 4.5) where this eighth simile is subsumed under the *gotra* aspect. In the first part of the translation of *Bth* (*de nas sems can dag de bzhin gshegs pa'i khamtsu skyes pa yang yod : snying po la gnas pa yang na : sems can de dag gi khong du mi chud te :*) the terminative particle *su* after *khamts* is to be deleted, if we want *Bth* to agree with the Sanskrit quotation. Otherwise it could be understood as “Then living beings come into existence and stay in the *dhātu* of the tathāgatas.” The two Tibetan translations of this passage are characteristic as *Bth* shows the more literal but grammatically also more problematic version, whereas *Tib* has introduced some changes (that are not based on the Sanskrit) and thus becomes a more smoothly readable text.

(2) The expression that the *dhātu* of a tathāgata has “arisen” (*utpanna*) in living beings is probably influenced by the *upamāna*, where it is said that life has entered (*zhugs*) the womb of the woman. The translators of *Tib* probably decided to render *utpanna* with *zhugs*, a verb not common in translating forms of *ut-pad* (cf. *Bth*: *skyes pa*), since the same verb is used in the the *upamāna*.

(3) *Khong (na)* in 8B.4 renders *garbha* (cf. *Bth*: *snying po*; parallel verse *RGV* I.123b: *garbhāntarasthā*). *Ch₂* obviously interprets this *garbha* not as the inside or the womb of living beings, but as the “store[, i.e., element] of a tathāgata” (如來藏) parallel to *dhātu*. The passage in *Ch₂*: 然——有情有如來界，具如來藏。是彼有情不覺，不知。: “And yet each living being has the element of a tathāgata (*tathāgatadhātu*), has the store of a tathāgata. [But] this [is something what] living beings are not aware [of, what they] do not know.” *Ch₁* constitutes the version with the widest gap to the transmitted Sanskrit: 其身皆有如來寶藏，如彼女人，而不覺知。: “In all their bodies there is the precious store of a tathāgata—just as in case of the woman—yet [they] do not know [it].”

(4) A construction expressive of concession (... *saṃvidyate na ca te...*) can also be found in the correspondent verse I.123 of the *RGV*: *sannātheṣu ... svāmāntarastheṣv api ||*.

(5) The first part of the passage cited in the *RGVV* could also have been the basis for a quotation of the *TGS* found in the *MPNS*. Of course, it should be titled a free rendering rather than a word-for-word quotation. The first part of the quotation in the *MPNS* runs as follows (including the introduction): *gzhan yang 'di na dge slong la la de bzhin gshegs pa'i snying po'i mdo sde chen po ston par byed do¹ // sems can thams cad la ni sangs rgyas kyi khamts yod la² khamts de rang rang gi lus la 'chang³ ste /...* [¹ *S*: *de*; ² *S*: *la l*; ³ *Q*: *tshang*.] (*MPNS Q* 99a6; *S* 175a4f.; quotations of the Chinese in Takasaki 1974: 137).

²⁰⁵ (1) *brTson 'grus brtan par gyis shig* could be the equivalent to **vīryam dṛḍham ārabhadhvam, ... utthāpayata* (with *dṛḍham* understood adverbially) or **dṛḍhavīryam ārabhadvam* (with *dṛḍha* as an attribute of *vīrya*; in this sense *Ch₂*: 發大堅固精進之心; cf. *BHSD* s.v. *dṛḍhavīryatā*; *KP* §153: *-dṛḍhavīrya-*). The character 發 probably renders a form of the root *ā-rabh* or *ut-thā* (see *BGDJ* 1255d).

(2) A detailed analyses of the meaning of *vīrya* is found in Pagel 1995: 201–216. Concerning the passage here, some verses in the *BCA* (VII.2, 16, 17) are of particular interest because they mention *ālasya* (“indolence”) and *viśādātmāvamanyanā* (“dispondency and self-contempt”) as the antipodes of *vīrya*. There it is also said that one should not deny the possibility of awakening for oneself (VII.17: *naivāvasādaḥ kartavyaḥ...*). Also in the *BCA*, as the commentator Prajñākaramati makes clear (cfr. to II.17), *vīrya* is taken as the main force to overcome a negative self-assessment.

(3) For *sro shi bar ma byed pa* the *Tshig mdzod* (s.v. *sro shi ba*) has the following entry: (*rnying*) *dpa' zhum pa l*. In *Tib* the auxiliary verb *byed pa*, rendering the expression transitive, is added so that *bdag nyid* can be taken as the object. *Bth* has here and also in 8B.5f. (*Tib*: *khyad du mi gsad par bya*) (*bdag cag la*) *gtses par ma byed par*. *Ch₂*, too, uses the same terminology 不... 欺誑 in both passages, so that we can assume that also in the Skt. the same formulation appeared twice.

²⁰⁶ (1) *Ch₂*: 汝等身中皆有佛體。於其後時畢成正覺。: “Within all of your bodies there is the essence of a tathāgata! Later [you] will all (or: finally; 畢) realize perfect awakening!” For *Ch₁* see below.

in the [next stage you] will be designated ‘buddha,’ rather than ‘bodhisattva’.”²⁰⁷

[8C]²⁰⁸

Then at that time the Exalted One uttered these verses:

[8.1] “It is as if a simple (*bāla*) woman without a protector, of bad complexion and ugly disposition would [go to] stay in a poorhouse, [and] after a time would there have become pregnant.”²⁰⁹

[8.2] “[and yet] the [life] that had entered her womb would be such that the [embryo] was destined [to become] a world emperor king, elevated by [his] magnanimity (*mahātmatā*) [and his seven] jewels, and ruling [over all] four continents.”²¹⁰

[8.3] “[But] that simple woman would [behave] like this: [she] would not know if [some life] had entered [her] womb, rather [she] would [continue to] stay²¹¹ in the poorhouse and pass the time in the belief that [she] was poor.”²¹²

²⁰⁷ (1) Probably, *Ch*₂ uses *pr̥thagjana* (凡夫) instead of *sattva* to separate the three categories sharper. The same motive might explain the statement that entering into the third category (that of being a tathāgata) will only happen after a *long* time (久後). This contradicts the parallel in 8.6b: 不久.

(2) The latter half of 8B in *Ch*₁: “Therefore the Tathāgata teaches widely the Dharma for [living beings] saying: ‘Sons of good [family], do not look down on yourself (for 輕鄙 see *BGDJ* 238a: *garhīta*)! [In] your own body you all have the buddha-nature (佛性)! If [you] practice diligently [and] diminish all evil, then [you] will attain the designations ‘bodhisattva’ and ‘exalted one.’ [You will] guide [and] save innumerable living beings!’” The last part is not found in *TGS*₂, but it appears in the last verse of 8C in all four translations.

²⁰⁸ In *Ch*₁ only five verses are found.

²⁰⁹ There is no equivalent for *bāla* in *Bth* and *Ch*₁₂. *Ch*₂ mentions the pregnancy with the imperial embryo already in pāda d: 有王胎孕. Also *Ch*₁ integrates parts of 8.2 in the first verse: “It is as if a poor woman of extremely ill-looking appearance would yet carry a child of precious characteristics [in her womb], who later would be the *cakravartin* king,....”

²¹⁰ (1) The use of ‘*byung*’ in *Bth* instead of ‘*phags pa*’ indicates **udgata*, *(*sam*)*udita* or something similar in the Skt. original; *Ch*₂: 圍. For *rin chen rnam*s, Skt. (*sapta*)*ratna*, see *BHSD* s.v. *ratna*.

(2) The understanding of *Bth* is different: “... [and yet] she would thus have attained such [a life] in her womb [that] would be destined to become the world emperor king, through [whose] magnanimity all [seven] jewels would arise [to him, who] would become the ruler of all four directions.” *Ch*₂ corresponds with *Bth* in the first half of the verse; the second half could be rendered: “This king would [have] magnanimity (*mahātmatā*) [and] would be surrounded by the seven jewels. [He] would rule over the four continents and be the sovereign.” In *Ch*₁ the first half of the verse corresponds to pādas c and d of *Ch*₂ and *Bth*; the second half already covers parts of verse 8.3 in *TGS*₂: “Seven jewels would complete [his] merit, [and as a] king [he] would have the four continents [under his control]. But this [woman] could not know [it and would rather] continuously think [that she and her child were] inferior.”

²¹¹ *gNas byed* could be a translation of Skt. *vāsam karoti*. The auxiliary verb *byed* (in contrast to ‘*gyur*’) further seems to stress that staying in the poorhouse is an autonomous act based alone on the decision of the woman herself without being inevitably forced to do so by other circumstances.

²¹² There is no particle of comparison in *Bth* (contrary to *Tib*: ‘*di lta bur*’). *Ch*₂ uses 如是 as the object of 有: “This simple [and] ugly woman would not yet know that in her belly exists *such* [a king].” Instead of the passing of time in pāda d *Ch*₂ mentions the negative thoughts of the woman: “... [and she] would cherish poverty [and] pain, [with her] heart [full of] distress.” *Ch*₁ corresponds roughly with 8.4 in *TGS*₂: “I see that all living beings suffer like infants. [Yet their] body embraces the store of a tathāgata, but [they] do not realize [it].”

- [8.4] “In the same way, I see that all sentient beings also [think of themselves as] unprotected and are distressed by *dharmas*, [which lead to] suffering, remaining [caught up] in the lesser pleasures of the three spheres, [even though] inside [them] there is the true nature (*dharmatā*)—like [the world emperor in] the womb [of the woman].”²¹³
- [8.5] “Having seen thus [I] taught the bodhisattvas:²¹⁴
 ‘As all sentient beings do not know about the true nature (*dharmatā*) within [their own] wombs [which] grants benefit [to] the world, [take care of them and let them] not consider themselves inferior!’”²¹⁵
- [8.6] “‘Apply energy (*vīrya*) firmly! Soon you yourselves²¹⁶ will become victorious ones. At some point [you will] attain the essence of

²¹³ (1) *BDJNQ* in pāda d have *mngal (la) gnas* (“embryo”). The analogy is thus between the *dharmatā* and the embryo: “... there is the *dharmatā*—like the embryo [in the womb of the woman].” *Bth* reads *stong pa* instead of *mngal* and could by that mean the hollow of the womb. The same pāda in *Ch*₂: “The store of [buddha] qualities in the body [of sentient beings] is like the store of [the woman’s] womb.” *Bth* and *Ch*₂ both lack a verb of existence.

(2) *Ch*₂ does not speak of distressing *dharmas*: “... [they are] experiencing poverty [which] drives [them] to suffering.” (受於窮迫苦); instead of “remaining in the lesser pleasures of the three spheres”: “being in the three spheres, indulging [in] pleasures.”

(3) The fourth verse in *Ch*₁ corresponds rather with verse 8.5 of *TGS*₂ and will be translated below.

²¹⁴ (1) In the prose, the speech is directed to living beings.

(2) The perfect form *bstan* (*Bth*: *smras*; see also *RGV* I.110d: ... *vyasṛjat*) is probably based on the Skt., and is intended to allude to the teaching activity of the historical Buddha.

²¹⁵ (1) Though the meaning of *mngal gnas* (*Bth*: *snying po gnas*) is usually “embryo,” I take it as a literal rendering of Skt. *garbhasthāna* or *garbhavasati*: “womb.” Such an analysis is confirmed by *Ch*₂: “... [the *dharmatā*] in the womb, [being] the benefit of the world, full of light” (胎中世利有光明). The Sanskrit may also have been a predicative construction joining that in 8B.4, where the quotation in the *RGV* read *garbhagata* and the parallel verse in the *RGV* I.123b had *garbhāntarastha*. The variants in fn. 18 and 19 of *P*₁₂ in the Tibetan edition document the modification from *mngal gnas na* to *mngal na gnas*. This can be considered a redactional attempt to give more sense to the Tibetan wording, which (with *mngal gnas na*: “in the embryo”) is, from the standpoint of the Tibetan reader, not understandable.

(2) *Tib* does not associate the *dharmatā* with light. However, this qualification is found in all other translations: ‘od byed (*Bth*); 有光明 (*Ch*₂); 有濟世明 (*Ch*₁ in 8.4d); see also the parallel verse *RGV* I.121c: ... *garbheṇa rājasṛiyam udvahantī*...: “with [her] womb carrying the luster of a king.”

(3) Whereas *Tib* only gives sense when the last pāda is understood in a causative sense “[Take care that living beings]...,” the basic understanding of *Bth* and *Ch*₂ is probably that the *bodhisattvas* should not look down on living beings. Both *Bth* and *Ch*₂ do not have a personal pronoun of the first person (*bdag* of *bdag dman ’du shes*), but use a pronoun of the second person (*Bth*: *khyod rnañs ngan pa’i ’du shes*), or do not mention a pronoun at all (*Ch*₂). The causative sense is only found in *Tib*, and thus can hardly be an original element of the Skt. text. The last three pādas in *Bth*: “Knowing about the *dharmatā* of all sentient beings [which], found [in their own] wombs, benefits the world and emits light, you should not have a bad idea [about them]!” Contrary to *Bth* which has no negation of “to know,” *Ch*₂ has no equivalent at all: “All sentient beings have the *dharmatā* [which], in [their own] wombs, [grants] benefit [to] the world [and] emits light. [Therefore] respect [all sentient beings and] do not deceive [them]!”

(4) The parallel verse 8.4 in *Ch*₁: “[All living beings do not realize their buddha-nature], therefore I disclose to the bodhisattvas: ‘Take care not to look down on yourself! Your body [has/is] the store of a tathāgata! [In your body] there is always the light to liberate the world!’”

²¹⁶ I understand *rang lus* (*Ch*₂: 自身) for Skt. **svakāya*, **svadeha* or **svāṅga* here as simply reflexive, similar to the reflexive use of *ātman*. It serves to stress the identification of the individual practitioner with the prophecy made in the verse.

awakening.²¹⁷ Then [you] will proceed to liberate myriads of living beings.’²¹⁸

[9 The simile of golden figures within burned clay molds]²¹⁹

[9A]

“Sons of good family, again it is like the example of figures of horses, elephants, women or men being fashioned out of wax, then encased in clay²²⁰ [so that they are completely] covered [with it and finally, after the clay has dried,] melted [in fire]; and after [the wax] has been made to drip out, gold is melted. And when [the cavity inside the mold] is filled with the melted [gold],²²¹ even though all the figures, having cooled down step by step (*kramaṇa*) [and] arrived at a uniform state,²²² are [covered with] black

²¹⁷ For *byang chub snying po*, Skt. *bodhimaṇḍa*, see *BHSD* and Lamotte 1962: 198, n. 105. *Bth* reads erroneously *bodhimaṇḍala* (*byangchub [sems] kyi dkyil 'khor*) instead.

²¹⁸ Pāda a in *Ch₂*: 發堅精進以修持: “[If you] bring forth firm energy [and] keep [it] by [your] practice,...”; for *dus zhig* in pāda c: 不久當: “then, not after a long time.” *Ch₁* ends with verse 8.5, which corresponds with verse 8.6 in *TGS₂*: “If [you] apply diligently energy, [you] will, after not a long time, attain the essence of awakening (*bodhimaṇḍa*), realize the path of perfect awakening [and] liberate innumerable [living beings].”

²¹⁹ (1) The here described technique for metal casting is the so-called lost-wax process or *cire-perdue* method. Common on all continents except Australia, it dates from the 3rd millennium BC (see *EncBrit* s.v. *lost-wax process*; Bol 1985: 19f., 119ff., 125ff.). In India this method is known by the name *madhūcchiṣṭavidhāna* (see Banerjea 1956: 214f.). The descriptions of the process in the 21 verses of the *Devatābhakti* chapter in the *Abhilaṣitārthacintāmaṇi* of the 11/12th century CE (see Saraswati 1936), along with the monograph of Reeves (1962), who describes the practice of this technique in India and Nepal till the modern times, appear to be practically identical with the process presented in the *TGS*. For a comprehensive description of the lost-wax process as found in Nepal see also Michaels 1988. As is documented by the *Pratyutpanna-buddha-sammukhāvasthita-samādhi-sūtra*, figures of buddhas were already known at the beginning of the second century CE (see Harrison 1978a: 38; *Hōb* s.v. *butsuzō*). A chart in Reeves 1962: 84 documents that even in the second half of our century in certain parts of Madhya Pradesh, figures of elephants and horses are the ones most frequently cast. The prominent position of these animals is confirmed by the simile of the *TGS*.

(2) As it is the case in the parallel verses of the *RGV*, in the *TGS* the expression for the mold containing the figure on the one hand, and the figure itself on the other hand is the same: *gzugs* (*RGV* I.124; 126: *bimba*). In order to render the process more distinctly I had to supply a number of additional annotations in brackets.

²²⁰ Lit.: “... [the figures are] then put into clay,....” *Bth* instead mentions that the figures are besmeared (*bskus*) (before: ... *lus kyi lugs sgoms sam* :?). *Ch₂*: ...泥裹其上, “... [with] clay [one] covers them,....” Instead of the figures of women *Bth* has lion figures.

²²¹ In *Ch₂* the melting and dripping out of the wax is not mentioned. Instead it is said that heating with fire is employed: 用火炙. The passage in *Ch₁*: “And further, o sons of good [family], just as a smith casts figures of pure gold and, as the casting is completed, puts [them] on the earth,....”

²²² (1) Instead of the gradual cooling down of the figures *Ch₂* says that (the artisan) has waited for the (figures’) cooling down (候其冷已).

(2) The Chinese versions are without an equivalent to *mnyam par gnas par gyur pa* (**samāvasthām prāpya*; *Bth*: **samatāvasthām prāpya*). The text of *Ch₂* (工匠將歸舍宅。: “[having waited for the figures’ cooling down,] their (= the figure’s) artisan brings [them] back home”) could easily result from a minor variant in the Skt. text: whilst *Tib* is based on something like *samāvasthām prāpya*, *Ch₂* may have read *svam āvasatham prāpya*. I am not sure whether the statement that the figures arrive at a uniform level is intended to point out the importance of an equal heating and cooling down of the figures. In the process of heating this is definitely a decisive factor, as is shown by a remark regarding antique bronze casting: “Unless it is baked slowly and *uniformly*, it is quite likely to crack.” (Lechtman and Steinberg 1970: 5; emphasis by me).

clay and unsightly outside, [their] insides are made of gold.²²³

Then, when a smith or a smith's apprentice [uses] a hammer [to] remove²²⁴ from the [figures] the outer [layer of] clay [around] those figures which he sees have cooled down, then in that moment the golden figures lying inside become completely clean.²²⁵

[9B]

“Sons of good family, likewise also the Tathāgata perceives with the vision of a tathāgata that all sentient beings are like figures [in] clay: the cavity inside the sheaths of outer defilements and impurities is filled with the qualities of a buddha [and with] the precious uncontaminated²²⁶ knowledge (*anāsrava-jñāna*); inside, a tathāgata exists in [all] magnificence.²²⁷

Sons of good family, having then perceived that all sentient beings are like this, the Tathāgata goes among the bodhisattvas and perfectly teaches [them] these [nine] Dharma discourses of that kind[, i.e., on the tathāgata-knowledge within all sentient beings].²²⁸ [Using] the *vajra*[-like] hammer of the Dharma,²²⁹ the Tathāgata then hews away all outer defilements in order

²²³ *Ch*₁: 外雖焦黑，內像不變。: “Though [the mold] outside was burned black, the figure inside is unchanged.”

²²⁴ A technical term for the removal could be a causative form of the root *sphuṭ*: “... to burst or rend suddenly, break, split, divide...” (*MW* s.v.). See, for example, the above mentioned text of the 11/12th century, where the removal process is described: *sphoṭayen mṛttikām dagdhām* ... (Saraswati 1936: 142, line 14). However, *Tib* employs continuously 'gogs (or *bkogs*), which does not seem to be a very appropriate term to describe the treatment. A Tibetan equivalent for *sphoṭayati* could be 'ges pa (*Jā*: “to split, cleave, divide”). Its intransitive form 'gas pa is given in *MVy* 6492 for *sphuṭam*. *Bth*, on the other hand, has *bong bas bsnun te*: *bcom nas*: *phyirol kyi sa med par byed do* .; which should be translated as: “... [he] pricks into with a small stone (?), destroys [the mold] and removes the outer [layer of] clay.” Cf. the parallel verses *RGV* I.124d, 126b and d, where *samchedayet* and *samchedayati* are used. For the emendation from *samcodayet* and *samcodayati* cf. Schmithausen 1971: 155. *Ch*₂ does not mention any tool. For *Ch*₁ see below.

²²⁵ Before stating that the figures become clean, *Ch*₂ adds after the mention that the mold has been destroyed: “As [he] has polished [the figures],...” (既淨持已; the compound verb 淨持 is uncommon). *Ch*₁: 開模，出像，金色晃曜。: “[The caster] opens the mold [and] takes out the figure. The appearance of the gold[en figure] is dazzling.”

²²⁶ For *anāsrava* cf. n. 169 above.

²²⁷ *Tib* does not make sense in this last passage, and I have therefore in syntactical matters relied on the other two translations of *TGS*₂. In *Bth* the verb *rab tu gang* governs the *buddhadharmas* as well as **anāsravajñānaratna*. *Nang na* in 9B.4, which in *Tib* is related to **anāsravajñānaratna* with a genitive particle, appears in *Bth* (*dbus na*) as part of the following unit as becomes clear by my translation: “...—inside, a tathāgata...”; *Ch*₂: 於內虛沖滿有佛法、無漏智寶。The phrase *mdzes par 'dug pa* I understand in the sense of Pā. *subhaṭṭhāyīn* (see *PTSD* s.v.). *Bth* (*legs par gnas pa*) instead suggests a form of the root *su(sam-)sthā* or something similar. There is no equivalent for this in *Ch*₂. The whole section in *Ch*₁: “Likewise, o sons of good [family], the Tathāgata observes that [in] all living beings there exists the store of a tathāgata [in their] body [and that they] are endowed with the characteristics [of a buddha].”

²²⁸ For *chos kyi rnam grangs* (*Bth*: *chos kyi gzhung*), Skt. *dharmaparyāya*, see *BHSD* s.v. *paryāya* (2); *RGV* has, in the parallel verse I.126d, *dharmākhyānanaya*- instead; *Bth* remains without the collective particle *dag* in connection with the Dharma; *Ch*₂: 妙法。 *Ch*₁ is much shorter: “Having observed thus, [the Tathāgata] widely discloses [the Dharma] for [all].” (如是觀已，廣為顯說。). Except *Tib*, all versions seem to have the general Dharma in mind, as in the other illustrations before.

²²⁹ A *vajra* is a very hard stone or diamond. The compound **dharmavajra-mudgara* is probably a *rūpaka-karmadhāraya*: “a *vajra*[-like] hammer which actually is the Dharma” (*dharmā eva vajramudgarah*). *Ch*₂ just mentions a *vajra*-pounder (金剛器仗).

to entirely purify the precious tathāgata-knowledge of those bodhisattva-*mahāsattvas* who have become calm and cool.²³⁰

Sons of good family, what is called ‘smith’ is a designation for the Tathāgata.²³¹ Sons of good family, after the Tathāgata, the Honorable One and Perfectly Awakened One, has perceived with [his] buddha-vision that all sentient beings are like this, [he] teaches the Dharma in order to establish [them] in buddha-knowledge, having let [them] become free from the defilements.²³²

²³⁰ In the Tibetan, the cooling down is limited to the bodhisattvas (but in verse 9.4 *Bth* mentions also the *sattvas*). *Ch₂* seems to comprise both groups (see below). *Ch₁* does not mention the bodhisattvas in the prose. In the parallel verse *RGV* I.126 the bodhisattvas are not explicitly mentioned. The verse before, with the formulation *jagad ... viśodhayati*, rather implies that *sāntam avetya ... manah* in I.126d should also be the *manas* of all living beings. That the Tibetan here only mentions the bodhisattvas is also surprising, because verse 9.6 later states explicitly that the Tathāgata perceives both groups.

²³¹ The last two passages have been understood differently in each version. It seems that *Bth* and *Ch₂* give a more detailed explanation why ‘smith’ functions as a designation for the Tathāgata. *Ch₂*: “(1a) Whether bodhisattva-*mahāsattvas* or [other sentient beings who] have become calm [and] cool, the Tathāgata for those sentient beings, with a *vajra*[-like] pounder purifies their [supernatural] vision of the Dharma [and] removes their defilements and impurities (1b) in order to purify the store of the precious tathāgata-knowledge [within them]. (2) Sons of good [family], the Tathāgata is like somebody carrying a precious figure (*dhāraka* for *kāraka*?). (3) [And], sons of good [family], in light of the similarity between [the artisan who] destroys the [figures’ outer] forms (?) and [the Tathāgata who destroys living beings’] impurities and lets [them] attain liberation, [‘artisan’] is a designation for the Tathāgata.” Without my additions the text of *Ch₂* in (2) and (3) would hardly be understandable. My interpretation is based on *Bth* which, however, has to be emended.

The first passage of *Bth* in brackets [...] appears twice and I take its repetition to be caused by an inattentive scribe who, as a classical case of *aberratio oculi*, jumped into the following passage also ending with ... *bar byed pa* (9B.13). *dKon mchog gi ye shes* in 9B.11–12 makes no sense too and I have to ignore it. The text of *Bth*: (1a) *de nas byangchub sems dpa’ sems dpa’ chen po zhi bar ’gyur grangs bar gyur te : de bzhin gshegs pas chos kyi rdorje ’i mtshon kyi de dag gi phyirol kyi nyon mongs pa mang po thams cad ma rung bar byed pa* [*de ni de bzhin gshegs pa ’i tshigs bla dag so : rigs kyi bu ’di bzhin du de bzhin gshegs pas : sangs rgyas mig gis*] (1b) *ye shes dkon mchog rab tu sbyangs pa ’i phyir ro* : [*dkon mchog gi ye shes*] (2) *las byed pas* : (3) *gzugs de dag bcom ste* : (2) *dkon mchog gi gzugs* (3) *nyon mongs pa la thar bar byed pa ’di ni de bzhin gshegs pa ’i tshigs bla dag so* :

It is likely that *Bth* has kept the assumed original text in (2) and (3): “That the smith destroys the [outer] forms [means] that [the Tathāgata] frees the figure[-like] jewel, the tathāgata-knowledge within,] from defilements. In light of this [fact, ‘smith’] is a designation for the Tathāgata.”

The last two passages in *Ch₁* until the end of 9B: “[When] those living beings become calm and cool, with [his] *vajra*[-like] insight, [the Tathāgata] smashes the defilements [and thus] discloses and purifies the buddha-body [within], just as [an artisan] takes a golden figure out [of its burned mold of clay].”

²³² (1) The Tibetan leaves open if the liberation from the defilements is part of the construction of finality ending with ... *phyir* (9B.15), or if the teaching takes place after the liberation. The before mentioned alternative considers the teaching as the basis for any emancipative process, whereas the latter alternative reminds us of the statement in 2B (cf. n. 93), which suggests that the teaching follows the liberation from the defilements. This is less probable.

(2) With *rab tu dgod pa Tib* could translate a causative form of the root **prati-ṣṭhā*; cf. e.g. ... *hīnayānasmī pratiṣṭhāpeyam ekaṃ pi sattvaṃ na mametu sādhu* // (*SP* 47.4 = II.57, Tib.: ... *theg pa dman la ... bkod na* // (*Q* 23a6). The idea that one can become established or fixed in knowledge is further attested in e.g. *SP* 64.4f. = III.21 where Śāriputra says about himself: *tadā mi vidhvāṃsita sarvasaṃsayā vicikīṣa naṣṭā ca sthīto ’smi jñāne* //.

(3) *Ch₂* is quite different in this passage: “Sons of good [family], the Tathāgata, Honorable One and Perfectly Awakened One, perceives that the store of a tathāgata of all sentient beings has sunk into the sheaths of an unlimited [number] of myriads of defilements. For those sentient beings, [he]

[9C]

Then at that time the Exalted One uttered these verses:

- [9.1] “It is like [the example of casting golden images: first, wax] figures are covered outside with clay; [then, after the wax has been melted and so drips out,] the inside [of the clay] has a cavity and is empty; [finally,] when [these cavities] are filled with precious melted materials, [they] turn into many hundreds of thousands [of golden figures].”²³³
- [9.2] “[Then] a smith, realizing that [the figures in the clay] have thoroughly cooled down, hews away the coverings of clay around the figures, thinking:
‘What can [I] do so that (*yathā*) these [black molds with their insides] made of precious materials may turn into clean figures?’”²³⁴
- [9.3] “In the same way I see that all sentient beings, without exception, are like golden figures covered with clay: [their] outside crusts are the sheaths of defilements, but inside there is the buddha-knowledge (*buddhajñāna*).”²³⁵
- [9.4] “[Using] the tool of the Dharma, [the Tathāgata] then hews away the [defilements of those] bodhisattvas who have become calm and cool, so that (*vena*) their defilements are expelled without any remainder.”²³⁶

breaks the sheaths of defilements [and leads them], established in the mental vision of a buddha, [to] supreme and perfect awakening (無上正等菩提).” Since the subject *agrabodhi* (“[the one who has reached] the foremost awakening,” i.e., the Buddha) of the parallel verse *RGV* I.125 appears only in the second half of the verse, it is possible that in *Ch*₂ the position of the term 無上正等菩提 at the end could result from the original Skt. syntax. Such an analysis assumes that Amoghavajra tried to stick as closely as possible to the word order of the Skt. text.

²³³ As in the prose, *Ch*₂ uses different characters for the wax *models* (模, *Tib*: *gzugs*), on the one hand, and the golden *figures* (像, also *gzugs*), on the other. The interpretation of the number (**śatasahasra*) varies: *Bth*: *brgya dang stong*¹ [1 for *stang*]: “hundreds *and* thousands”; *Ch*₂: 其數或百或一千: “... their number is a hundred or a thousand.” *Ch*₁ is different from its own prose: “It is like innumerable figures of pure gold [in case of] a large [scale] casting: a stupid person would look from outside [and] only see burned black clay [molds].”

²³⁴ In all other translations *pāda* d of *Tib* already appears as *pāda* b. The verse in *Ch*₂: “When the artisan has realized that [the figures in the clay mold] have cooled down, [he] breaks their clay[-coverings and] manifests the figures. When the clay has been removed, [he] purifies those precious figures. The artisan thinks: ‘[By this] refining process all [figures] will reach completion!’” As *Bth* is hardly intelligible in the last two *pādas*, one cannot know which of the two versions, *Tib* or *Ch*₂, comes closer to the original idea of *TGS*₂. *Ch*₁: “The caster measures the time of the cooling down [of the figures and] then opens the mold so that the substance [inside] becomes manifest. As the dirt is removed, [the figures’] beautiful appearance becomes clearly manifest.”

²³⁵ *Ch*₁: “With the vision of a buddha I see [all] kinds of living beings like this: within the mud of defilements all [living beings] have tathāgatahood.”

²³⁶ *Ch*₂ differs only in the first two *pādas* from *Tib*: “Whether [sentient beings who] have become calm and cool, [or] bodhisattvas [whose] knowledge has become pure [already] earlier,....” In assuming that the two *pādas* mention two different groups I follow the prose of *Ch*₂. As a matter of fact, the verse *pādas* could also be understood as indicating the same group of bodhisattvas: “When the bodhisattvas, having become calm and cool, with their wisdom [already] earlier purified,....” *Bth*, apart from the bodhisattvas, also has *sems can* for *sattva*: *sems can rnams ni¹ byangchub sems dpar gyur* : [1 for *na*]. As the preceding *pāda* ends with *na*, the translation should be: “[When they are calm...], *sattvas* have become bodhisattvas.” Further in *pāda* c: “To them [I] give the cutting tool [which is] the Dharma.” In *Ch*₁ the cooling down is lacking, though it appears in its prose. The verse in *Ch*₁: “Bestowing with *vajra*[-like] insight the smashing of the mold of

[9.5] “[Living beings’ internal] child of a victorious one who has become clean in this [world are] just like the beautiful precious figures: [their] bodies are filled with the ten powers [of a buddha], and [they] are venerated here [by] the world with [its] gods.”²³⁷

[9.6] “Thus I see all living beings; thus I see also the bodhisattvas. Thus purified [by the Tathāgata they] become *sugatas*. [Having become] pure *sugatas*, [they] then teach the rule (*netrī*) of the buddhas.”²³⁸

[10A Merit from propagating the TGS]

Then the Exalted One said to the bodhisattva-*mahāsattva* Vajramati:

“Vajramati, sons and daughters of good family, whoever—whether a layman (*grhin*) or ordained (*pravrajita*)—²³⁹ learns (**udgrhñāti*) this Dharma discourse (*dharmaparyāya*) [called] *Tathāgatagarbha*, preserves [it] (**dhārayati*), recites [it] (**vācayati*), understands [it] (**paryavāpnoti*), arranges [it] into a book, explains [it] (**deśayati*) also to others in detail and teaches [it] (**samprakāśayati*),²⁴⁰ will produce much²⁴¹ merit (*puṇyam prasavati*).”

defilements, [the Tathāgata] discloses the store of a tathāgata [within living beings], just as the precious golden [figure] became manifest.”

²³⁷ (1) The content of verse 9.5 is not found in the prose. Verse 9.6 in *TGS₂* perfectly complements verse 9.4 because it states that living beings are purified “in such a way” (*Tib: de ltar dag pa; Bth: de ltar [b]dag; Ch₂: 如是清淨*). “In such a way” could refer to the purifying activity of the Tathāgata with the “tool of the Dharma” mentioned in 9.4. In this context, verse 9.5 of *TGS₂* maintains an extraneous position and interrupts the natural flow of the verses. The verse 9.5 may be a later interpolation into *TGS₂*. Verse 9.5 of *Ch₁* corresponds rather with verse 9.6 of *TGS₂*. In *Ch₁* there is no counterpart to the content of 9.5 of *TGS₂*.

(2) *Ch₂* lacks the predicate “clean” in the first two pādas. This can be explained by assuming a simple variant reading: *buddha* instead of *śuddha*. This could explain why two terms meaning “buddha/tathāgata” appear in pāda a of *Ch₂* (如來, 佛).

²³⁸ (1) *Tshul* (*netrī* or *naya*) is used here parallel to *dharmaparyāya*, which appears in the corresponding prose section 9B.5–7. Instead of “rule,” *Ch₂* and *Bth* speak of “buddha-vision” (*buddhanayana* or *buddhanetra*). The originality of *Tib* is supported by the parallel in *RGV* I.126d: *dharmākhyānanayaprahāra*: “strokes [in form of different] methods (*naya*) of declaring the Dharma.”

(2) The verse in *Ch₂*: “I see that all sentient beings, thus purified [by the Tathāgata], become *sugatas* and, having become *sugatas*, [they] realize the buddha-vision. [They are] perfectly endowed with the supreme knowledge of all [matters] (for *sarvajña*, *sarvajñatā* see *BGDJ* 453d s.v. 薩婆若; cf. also the parallel verse *RGV* I.126c, where the Buddha is called *sarvavid*).” Pāda b of the Tibetan versions concerning the bodhisattvas is missing in *Ch₂*. *Ch₂* instead adds with pāda d a new element also found in the prose of *Ch₂*. However, *Ch₁*, too, speaks of bodhisattvas and thus makes *Ch₂* as the original wording of *TGS₂* less probable. *Ch₁*: “[I will] tell the bodhisattvas what I have observed in this way (?): ‘O you, keep well [to what I tell you]: Convert all living beings!’” It is impossible to integrate pāda a organically into the verse.

²³⁹ It is not clear if the here mentioned laymen and ordained followers are conceived of as a separate group or if they are part of “sons and daughters of good family.”

²⁴⁰ (1) For *dhārayati* (**chang ba*) with the two possible meanings of “to preserve” and “to carry [on the body]” see Schopen 1977: 142 and Lalou 1957: 328f.; cf. *ASP_{OW}* 582.5f.: ... *prajñā-pāramitā kāyagatā vā bhaviṣyati pustakagatā vā*, which the cty. (582.9) explains as: *kāyagatā veti urogati karaṇāt. pustakagatā veti pustakadhāraṇāt*.

(2) For *glegs bam du byas te ’jog pa* cf. the intransitive equivalents with the sūtra as subject in *SP* 232.1: *pustakagatas tiṣṭhet* (= *Q* 100a3: *glegs bam du byas te gzhag pa*) and *KP* § 160. *Ch₁* lacks this element.

(3) The enumeration of meritorious acts is found with variations in many other sūtras. See for example *SP* 226.3ff: *imaṃ dharmaparyāyam* (1) *sakalasaṃāptam udgrhñiyād vā*¹ (2) *dhārayed vā*

[10B Devaluation of external worship]

“Vajramati, a certain bodhisattva²⁴² might apply [himself] to realize the tathāgata-knowledge, and for the purpose of venerating all buddhas without exception in every single world system (*lokadhātu*),²⁴³ [he] would, after achieving supernatural powers (*ṛddhi*), attain (*samāpadyate*) such an absorption (*samādhi*)²⁴⁴ that through the power created by [this] absorption [he could] day by day present (*niryātayati*) pavilions to every single existing²⁴⁵ tathāgata among the buddhas, the exalted ones, even more [numerous] than the sands of the Ganges River, in myriads (*koṭīniyutaśatasahasra*) of buddha-fields even more [numerous] than the sands of the Ganges River, together with [their] bodhisattvas and the communities of *śrāvakas*.²⁴⁶ [To reside in these pavilions would be] pleasant

(3) *vācayed² vā* (4) *parāvāpnuyād³ vā* (5) *prakāśayed⁴ vā* (6) *likhed vā* (7) *likhāpayed vā⁵* (8) *likhivā cānusmarel⁶...*

[¹ *vā* inserted acc. to *O*; ² *O*: *deśayiṣyanti* for *vācayet*; ³ *O*: *parāvāpsyanti*; ⁴ *O*: *pravartayiṣyanti*; ⁵ (7) missing in *O* and the Tibetan translation.; ⁶ (8) in *O*: *likhitam vā 'nusmariṣyanti*]

= *Q* 98a1: ... *chos kyi rnam grangs 'di* (1) *mtha' dag chub par 'dzin tam* (2) *'chang ba 'am /* (4) *kun chub par byed pa 'am* (5) *rab tu ston pa 'am* (6) *yi ger 'dri ba 'am* (8) *bris nas rjes su dran par byed pa 'am...*

Further see *SP* 375.5f.: ... *cemam evamrūpaṃ sūtrāntaṃ* (1) *dhārayiṣyanti* (2) *vācayiṣyanti* (3) *deśayiṣyanti* (4) *parāvāpsyanti* (5) *parebhyas ca vistareṇa samprakāśayiṣyanti ..*

= *Q* 159b2f.: ... *mdo sde 'di lta bu 'di* (1) *'dzin pa dang* (2) *klog pa dang* (4) *kun chub par byed pa dang* (3) *'chad¹ ba dang* (5) *gzhan dag la yang rgya cher yang dag par rab tu ston pa...*

[¹ for *'chang*].

Ch₁ adds the veneration (供養) of the sūtra.

²⁴¹ *Ch₁*: 不可計量 and *Ch₂*: 無量: “measureless [merit].”

²⁴² Only *Ch₂* adds in this passage “sons and daughters of good [family]” (或有善男子、善女人). In a similar passage *KP* §158, which will be discussed below in n. 246, only *kulaputra* and *kuladuhitr* appear.

²⁴³ *Tib* shows, once again, a unique arrangement of the elements in the first section of the sentence. *Bth* states that the bodhisattva applies himself (1) to the realization of tathāgata-knowledge *as well as* to the veneration or, as a second alternative, (2) to the veneration *in order* to realize... (*de bzhin gshegs pa 'i yeshes bsgrub pa 'i phyir : ++¹ sangs rgyas thams cad la mchod pa 'i phyir : nan tan du byed cing : ...*). *Ch₂* only speaks of the accumulation of tathāgata-knowledge as the purpose of the striving and veneration (精勤, 供養). *Ch₁* does not mention the veneration but states as the purpose “the [realization] of the buddha path” (爲佛道故). It is difficult to judge which version of *TGS₂* should be considered as coming closest to the Skt. original.

²⁴⁴ *Tib* and *Bth* both mention the entering into *samādhi* after the attainment of supernatural powers. The reverse order would be more appropriate. In *Ch₂* the attainment of the *ṛddhis* does not appear. Instead of the “power created by this absorption” *Ch₂* merely reads “the *ṛddhis* of this *samādhi*” (此色三摩地威力). However, *Ch₁* seems to support the Tibetan: 修習神通, 入諸三昧 (translation below). The syntax of the Skt. on which *Tib* and *Ch₂* are based, may be similar to *SP* 406.6: (*sa tasyām velāyām*) *tathārūpaṃ samādhiṃ samāpanno yasya samādheḥ...* (cf. also *SP* 426.9).

²⁴⁵ The fact that two verbs considering the existence of the buddhas appear in the Tibetan (*Tib*: *bzhugs shing gnas pa* in 10B.8; *Bth*: *bzhugs shing spyod pa* in 10B.6) reminds one of formulations as found in e.g. *SP* 42.2: ... *tathāgatā ... tiṣṭhanti dhriyante yāpayanti...*; cf. also *BHSD* s.v. *yāpayati* (2). Both Chinese versions operate instead with **pratyutpanna* (現在): “existing at the present moment.”

²⁴⁶ (1) The passage would remain difficult, if we did not know a similar passage in *KP* §§ 158–159. Through the passage of the *KP* it becomes clear that the relation between *sangs rgyas bcom ldan 'das* in 10B.7 and *de bzhin gshegs pa re re* in 10B.8f. is that of a partitive genitive: *gaṃgānadivālukasamānām ca buddhā[nām] bhagavatānām ekekaśya ca tathāgatasya...* (§158.5f.); *gaṃgānadivā[lukasa]mānām ca buddhānām bhagavatām ekekaśya ca tathāgatasya...* (§159.1f.) [letters in brackets in case of mutilated passages supplied from Weller 1965: §159, n. 4 and 6; for

in [every] season.²⁴⁷ [Their] width [and length would each be] one *yojana*, [their] height ten *yojanas*. [They] would be made of all [kinds of] jewels,²⁴⁸ [and would be] heavenly fragrant, being strewn with a variety of fallen blossoms²⁴⁹ and furnished with all immaculate (*anavadya*) objects of enjoyment (*bhoga*). [The number of pavilions would be] as many as fifty

the conjecture *ekekasya* for *ekekam* see his n. 7]. In 10C.2 the same partitive relation is clearly expressed with *las*: ... *sangs rgyas ... de dag las de bzhin gshegs pa re re...* Further, *Ch*₂ seems to split the passage into two separate sentences and starts the second sentence with 如是乃至過五十恒河沙諸佛世尊 ... 各送 ... 樓閣,: “In this way (= venerating each single buddha as said before: 於一一佛所供養承事), [he] would each present ... pavilions ... [so that the whole number of] buddhas, exalted ones would result in more than fifty [times] the sands of the Ganges River.” This is a somehow forced translation, but I believe that it is close to what had been originally focused on by the Indian authors. My interpretation in this point follows *Ch*₁ (see below). In the Tibetan translations there is no equivalent found for the passage which states that the number of buddhas would gradually accumulate. Neither does the passage of the *KP* prove such a thought.

(2) *Ch*₂ and also *Bth* attribute *kofīniyutaśatasahasra* not to the buddha-fields but to the tathāgatas themselves being present in the buddha-fields. Also, in contrast to *Tib*, *Ch*₂ only speaks of a hundred thousand of pavilions (in the next passage) and instead attributes the number of “as many as fifty [times] the sands of the Ganges River” to the buddhas, exalted ones. *Bth* is ambivalent in this last point and could well represent the position of the phrases in the Skt.: *de bzhin gshegs pa re re la chu bo gang ga lnga bcu'i bye ma snyed kyi khang bu brtsog pa brgya phrag stong...* The position of *chu bo gang ga lnga bcu'i bye ma snyed* for **pañcāśadgaṅgānadivālikopamāḥ* between “tathāgatas” and “pavilions” could easily lead to the different attribution as attested in *Tib* and *Ch*₂.

(3) The parallel passage in the *KP* is too long to be quoted. It is the answer by the Buddha to the question by Kāśyapa as to how much merit would be produced by someone who teaches the *Ratnakūṭa* (of which the *KP* is a part) (§157). Structurally the answer is very similar to the passage in the *TGS*. The elements, however, vary in stating that sons and daughters of good family would fill up all the worlds with the seven jewels and present them to the tathāgatas. They would venerate the tathāgatas for many cosmic cycles and finally erect seven-jeweled stūpas for those tathāgatas who have entered into nirvāṇa (§§158–159). It is interesting that in the *KP* the Skt. has several repetitions and is much longer than its Tibetan translation. This seems also to hold true for the Tibetan translations of this passage in the *TGS* in relation to the more repetitive Chinese versions. Besides the general structure of opposing external worship on the one hand, and preservation of just a single verse of the sūtra on the other hand, a close relation can be seen between the *TGS* and the *KP* in this passage in terms of single elements: respect to the buddhas in two ways (veneration and giving of presents), the creation of stūpas or *kūṭāgāras*, the mentioning of the *śrāvaka* community which does not appear in other passages of the *TGS*, the use of the expression *gaṅgānadivālukasama* (seven times in *KP* §§158–159), and finally a fondness for the attribute *saptaratna*. For the second passage in this section see below.

²⁴⁷ For *dus du bde ba* cf. the similar expression in the *Subhāṣitaratnakaraṇḍakakathā* (Zimmermann: 1975, verse 102): *prāsāde ... sarvaturamye...*, “im Palaste ... zu allen Jahreszeiten behaglich...” *Ch*₂ (當於和暢、安樂之時) does not attribute it to the pavilions but specifies here the act of presenting (送): “[to present] at a very pleasant, peaceful time.”

²⁴⁸ *Bth* and *Ch*₁ read *saptaratna* instead of *sarvaratna*.

²⁴⁹ (1) The Skt. for *me tog sil ma ... bkram pa* should be *muktakusumābhikīrṇa* (*SP* 103.4; = *Q* 46b5: *me tog sil ma gtor ba*) or *muktapuspāṇi sthāpayati* (*Suv* 105.9; = *Suv*₁ 81.6: *me tog sil ma dgram par bgyi*). Skt. *mukta* characterizes the blossom as “loose, fallen (from its stalk)” (*BHSD* s.v. *mukta*). It is translated into Tibetan as *sil ma* in the sense of “little piece, a fragment” (*Jā* s.v. *sil bu*). *Ch*₂ has 散(種種)花: “(different) blossoms, being dispersed.”

(2) *Ch*₁ and *Bth* do not mention the blossoms at all. Instead, *Ch*₁ speaks of palanquins spread with heavenly silk (敷以天繒). As, on the one hand, the blossoms do not appear in the verses of any of the versions, and, on the other hand, in 10.5 and 10.6 of all versions silk-spread thrones are mentioned, it is quite likely that the blossoms are a later element, interpolated into the prose of *TGS*₂ (but not in *Bth*!).

[times] the sands of a hundred thousand Ganges Rivers. For fully a hundred thousand²⁵⁰ cosmic cycles (*kalpas*) [he] would show reverence in this way.²⁵¹

If [on the contrary] a certain son or daughter of good family²⁵² should forge the resolution (*citta*) to [strive for] awakening (*bodhi*), and internalize²⁵³ or arrange into a book (*pustaka*) only one simile from this Dharma discourse [called] *Tathāgatagarbha*, [then], Vajramati,²⁵⁴ the previously [described bodhisattva's] accumulation of merit²⁵⁵ does not come near by even a hundredth, a thousandth, a hundred thousandth—any number, any tiny part (*kalā*), any calculation or any resemblance—to his accumulation of merit (*puṇyābhisamkāra*); nor does [it] bear any comparison.”²⁵⁶

²⁵⁰ *Ch*₂ has “up to a thousand *kalpas*” (乃至千劫); *Ch*₁: 乃至無量百千萬劫 (see below).

²⁵¹ (1) Both Tibetan translations have *pas* at the end of this passage. This is surprising as one would rather expect a particle indicating a contrast such as *la* (cf. *Ch*₁ which has 不如; 不如 can function as an equivalent for *anyathā* (cf. *BCSD* s.v.): “on the contrary”). This is in fact the case in the parallel 10C.4. However, the employment of *pas* is also attested for the parallel passage *KP* §159 without any direct counterpart in the Skt. Also there both Chinese translations read 不如. *Pas* was probably added here as a particle in order to indicate the comparative relation the passage is dealing with. Grammatically, however, this comparative relation is already expressed with ... *la* (10B.18: “in [comparison to] ...”), and the whole first part of 10B till ... *byed na* (10B.17) can only be understood as an introduction which leads to the actual comparison and which describes the two competing ways of gaining merit (which should, as mentioned above, be separated with a contrasting element rather than with *pas*).

(2) The section in *Ch*₁: “Vajramati, if a bodhisattva, in order [to realize] the path of a buddha, would practice hard, progress skillfully, cultivate supernatural powers, enter into the *samādhis* [and], desiring to increase the roots of [his] merit, venerate all the present buddhas, more than the sands of the Ganges River, [and if he] would create more pavilions than the sands of the Ganges River, [made of] the seven jewels, [their] height ten *yojanas* and equally one *yojana* in width and length, furnished with palanquins [made of] the seven jewels [and] spread with heavenly silk, [and if he] would day by day create more pavilions than the sands of the Ganges River, [made of] the seven jewels, for every single buddha, [and if he would] present (以用奉獻 for **niryāyati*?) [them] to each single tathāgata and also the bodhisattvas [and] the community of *śrāvakas*, by these acts [he] would thus widely for (?) all present buddhas, more than the sands of the Ganges River, successively arrive at [a number of] pavilions more than fifty [times] the sands of the Ganges River, [made of] all jewels, [which he] would present to the present buddhas more than fifty [times] the sands of the Ganges River and also the bodhisattvas [and] the community of *śrāvakas*, up to innumerable hundreds, thousands, tens of thousands of *kalpas* long.”

The text of *Ch*₁, too, is in several instances problematic. The fact that the bodhisattvas and the *śrāvakasamgha* appear a second time towards the end of the passage can be explained as erroneous repetition.

²⁵² *Ch*₂ has *bhikṣus*, *bhikṣuṇīs*, *upāsakas* and *upāsikās*. The passage in *KP* is like *Tib*.

²⁵³ My translation “to internalize” is for *lus la 'chang*, Skt. *kāyagata*; *Ch*₂: 在於身. For the pair *kāyagata* and *pustakagata* cf. e.g. *SP* 282.11 and the quotation of *ASP*_{OW} in n. 240 (1) where *kāyagata* (variant: *kaṇṭhagata*) is explained as *urogatikaraṇāt*.

²⁵⁴ The text part between “²⁵⁴→” and “←²⁵⁴” is lacking in *Ch*₁ and has no counterpart in the verses of all versions. As it is of repetitive nature (cf. 10C) it could well be a later interpolation in *TGS*₂.

²⁵⁵ In *Ch*₂ 如來安立 is added as in the parallel 10C : “[the previous accumulation of beneficial acts which] was established [in] the tathāgatas [as field of merits (*puṇyakṣetra*)] (?)” The characters 安立 could alternatively mean that the Tathāgata “stipulated” the then following comparison (cf. n. 260).

²⁵⁶ The basic structure of the whole of 10B becomes clear due to parallels, again with different elements, in other sūtras. See e.g. *SP* 332.9ff.:

kaścid eva kulaputro vā kuladuhitā vā ... pañcasu pāramitāsv ... caret / ... yena cājita kulaputreṇa vā kuladuhitrā vemaṃ ... dharmaparyāyam śrutvaikacittotpādikāpy adhimuktir utpādītābhīraddadhānatā vā kṛtā / asya puṇyābhisamkārasya kuśalābhisamkārasyāsau paurvakaḥ puṇyābhisamkāraḥ kuśalābhisamkāraḥ ... śatatamim api kalām nopayāti

[10C Superiority of joyful approval of the TGS]

“Then, Vajramati, [suppose] a bodhisattva, in searching (*paryeṣate*) for the Dharma of the buddhas,²⁵⁷ strewed four hundred thousand triple-bushels of flowers of the coral (*mandāra*) tree for every single tathāgata among the buddhas, the exalted ones, for fully a hundred thousand cosmic cycles.²⁵⁸

Vajramati, if [on the contrary] any monk, nun, *upāsaka* or *upāsikā* should decide [to strive] for awakening, and after listening to this Dharma discourse [called] *Tathāgatagarbha* raised [their] joined palms and said [just] the single phrase ‘I joyfully approve [what I have heard]!’ (*anumodayāmi*),²⁵⁹ [then] Vajramati,^{←254} the previously [described bodhisattva’s] accumulations of merit and benefit, connected with the offering of flowers and flower garlands, planted among the tathāgatas [as fields of merit (*puṇyakṣetra*)],²⁶⁰

Cf. also the passage in KP §§158–159:

kulaputro vā kuladuhitā vā ... stūpa kārāpayet ※ yaś ca kulaputro vā ... ekām api gāthā
udgrhṇeya dhāra[yet] asya puṇyaskandhasya sa pūrvakapuṇyaskandhaḥ śatimām api /
kalā<m> nopaiti / ... upaniṣām api / na kṣa[mate]....

It is clear that in this passage *Bth* follows much closer the Skt. as *Tib* and the Tibetan translation of the *SP*. *Ch₂* has an enumeration even longer than the one in the *SP*. With *bye ba Bth*, too, shows a part of *koṭīniyutaśatasahasra* which obviously was not translated in *Tib*. The first half of the passage in *Ch₁*: “Vajramati, [if] on the contrary (不如) somebody would take pleasure in the awakening [and] would learn ... and venerate the TGS, even if it would just be a single simile,....”

²⁵⁷ Along with KP §158 *Ch₂* has *kulaputra* and *kuladuhitā* instead of *bodhisattva*; instead of the Dharma of the buddhas: “supreme awakening” (無上菩提).

²⁵⁸ (1) The uncommon construction ... *de dag las* in 10C.2 for a genitive in the Skt. is also found in the KP: *sangs rgyas bcom ldan 'das ... rnam las de bzhin gshegs pa re re 'i...* (§§158.5f., 159.1f.) for ... *buddhānām bhagavantānām ekekaśya ca tathāgatasya...* However, the construction with *las* is clearer than the formulation in 10B8f. with a genitive in *Tib* (cf. note 246 (1)). *Ch₂* does not show a partitive relation and speaks as in 10B of “buddhas, exalted ones together with bodhisattvas and the great communities of *śrāvakas*” (并及菩薩、聲聞大眾) to whom they would make offerings with (取) the flowers.

(2) Instead of a hundred thousand *kalpas*, *Ch₂* and *Bth* have only a thousand *kalpas*. Instead of four hundred thousand *khāras*, *Bth* has *koṭīśatasahasra*, whereas *Ch₂* (百千斛) reads “a hundred thousand.”

²⁵⁹ The important function of “joyful approval” (*anumodanā*) in order to acquire merit becomes clear through a verse of the *SP* (93.1f. = III.106), in which the Tathāgata says to Śāriputra:

yaś cāpi te bhāṣati kaści sattvo anumodayāmi vadeta vācam /
mūrdhna cedam pratigrhya sūtram avivartikam tam naru dhārayes tvam // 106 //

And if any sentient being would say to you ‘I joyfully approve [this teaching]!’ and would humbly accept this sūtra, you should remember that person as [somebody who will] never [again] turn back [from supreme awakening]!

For further passages concerning *anumodanā* resulting from the “rejoicing at the merit of others” see e.g. *PraS* 23A–23G, chapter 6 in the *Aṣṭasāhasrikā Prajñāpāramitā* and *MPPU_L* IV.1879ff.

²⁶⁰ I am not sure whether I understand *Tib* here in the right way. The same passage in *Bth* reads *de bzhin gshegs pa metog phreng¹ ba dang : bcas pa phul zhing : gtor ba* [1 for *phring*]. Instead of

do not come near by even a hundredth, a thousandth, a hundred thousandth—any number, any tiny part, any calculation or any resemblance—to those accumulations²⁶¹ of merit and benefit;²⁶² nor do [they] bear any comparison.”²⁶³

[10D]

Then at that time the Exalted One uttered these verses:

[10.1] “[Suppose], having brought forth the wish for awakening,²⁶⁴ a certain sentient being listened to this [discourse and] learned [it], copied [it] or arranged [it] into a book²⁶⁵ and explained [even just] a single verse with appreciation (*sagaurava*);”²⁶⁶

[10.2] “or if after listening to this *Tathāgatagarbha[sūtra]* somebody searched for this excellent awakening: listen to [my description of] the benefit (*anuśamsā*) [accruing] to him in these cases—[a description of] what amount of merit is produced!”²⁶⁷

bzhag pa (from *'jog pa*) *Bth* uses *gtor ba*, which is the same verb as used above, with regard to the flowers (“to strew”). The verb *'jog pa* in *Tib*, however, cannot have the meaning “to strew.” It is hardly possible to bring sense into the wording of *Bth*. My translation of *Tib* leads to a similar understanding as expressed by the Chinese versions. *Ch*₂: “Vajramati, as for these best benefits and wholesome roots [in comparison] with the previous wholesome roots, [i.e.] the merit [resulting from] offering the flowers, established [in] the tathāgatas [as field of merits (*puṇyakṣetra*): if one] compares [these best benefits and wholesome roots with] the previous merit, a hundred parts [of the previous merit] ... do not equal one part [of it].” The formulation 如來安立, which is also found in 10B, may, as already suggested in n. 255, alternatively be understood in the following way: “... the merit [resulting from] offering the flowers, *the Tathāgata has stipulated*: [If one] compares...” But cf. *Ch*₁ which has 於諸佛所種: “[the wholesome roots ...] planted among the buddhas.”

²⁶¹ Both forms *mngon par 'du byed pa* in 10B and *mngon par 'du bya ba* here are most probably translations of the same Skt. *abhisamkāra*. Present, perfect and future forms of *'byed pa* are also found in the translations of *abhisamkāra* in the *SP* (cf. *SP*₁s.v.).

²⁶² *Tib* employs here the pair *puṇyābhisamkāra* – *kuśalābhisamkāra*; *Bth* uses once *kuśalamūlābhisamkāra* instead of *kuśalābhisamkāra*; *Ch*₂ speaks, in the case of the joyful approval, of “these best benefits [and] wholesome roots” (此勝福、善根), and compares them with “the previous wholesome roots, [i.e.] the merit [resulting from] offering the flowers” (前善根、獻花功德).

²⁶³ The whole section in *Ch*₁: “Vajramati, even if the wholesome roots [and] the benefit of this son of good [family], planted among the buddhas [as the fields of merit], are measureless, compared with the merit attained by the son and daughter of good [family who propagated the TGS], a hundred parts [of the former merit] do not come near one [part of this merit],...”

²⁶⁴ The Skt. on which *Tib*: *mos pa bskyed nas* is based, could be *chandam janayati*. *Bth* has *dad' bskyed pa* [1 for *'dad*] instead, *Ch*₁ reads 求; *Ch*₂: 樂求. Cf. e.g. *SP* 47.13 = II.62b: *bodhāya janetha chandam* /. The translations of *Bth* and *Ch*₁₂ are not unusual. For *mos pa* as an equivalent for *chanda* see *BCA*₁ s.v. *mos (pa)* 3.

²⁶⁵ I cannot explain why the majority of the collated Tibetan texts has the future form *gzhag* instead of the present form *'jog*, which appears in the prose of 10A. *P*₁₂₃ read *bzhag*.

²⁶⁶ *Ch*₁₂ do not mention that the verse would be explained (to others). The verb *bshad* (perfect of *'chad*) could (though not in the passage in 10A) also represent a form of the root *paṭh*: “to recite” (see *BCA*₁ s.v. *bshad pa*). Kagawa (1962: 19) translates according to the variant of *P*₁₂₃ in 10D fn. 7 (*pa'i* for *pas*): ... 恭敬の一偈を説く: “... and explains a single verse of veneration.” But cp. *Bth*: *sti stang byas te* .

²⁶⁷ *Bth* and *Ch*₂ bear a similar message as *Tib*. *Bth* has *bsngag pa*, Skt. *prasaṃsā* or *varṇa* (“praise, glory”), instead of *phan yon* for *anuśamsā* (*Ch*₂: 福 probably for *anuśamsā*). *Ch*₁ differs considerably: “The subtle store of a tathāgata in an instant brings forth joyful approval (隨喜; *anumodanā*). Listen [therefore] to this correct doctrine [and your] merit will be measureless!” The search for awakening in pāda b of *Tib* appears in *Ch*₁ only at the beginning of the following verse

- [10.3] “[Suppose] a hero (*vīra*) abiding in these excellent supernatural powers²⁶⁸ worshiped for a thousand cosmic cycles the highest of humans (*narottama*) and [their] *śrāvakas* in the ten directions.”²⁶⁹
- [10.4] “[He] would present to each teacher (*ācārya*) of the world without exception excellent palaces (*vimānaśreṣṭha*) made of jewels—in number several myriad [times the sands of] the Ganges [and] more, unimaginably (*acintya*) many.”²⁷⁰
- [10.5] “The [palaces] would be ten *yojanas* high and one *yojana*²⁷¹ wide and long, be excellently furnished with fragrances and incense, and inside be provided with thrones made of jewels.”²⁷²

[10E]

- [10.6] “[These] thrones, and palanquins too, [would be] spread with silk and calico a hundred [times],²⁷³ as innumerable as [the sands of the] Ganges

10.3, and should be the counterpart to the realization of tathāgata-knowledge at the beginning of section 10B. That *Ch*₁, in relating the search for awakening (*Tib* 10.2b) to 10.3, is probably the more authentic version, is supported by *Bth* and *Ch*₂ where the same pāda appears at the end of verse 10.2. If we relate the first verse half in *Bth* and *Ch*₂ to 10.1 and combine its second half with 10.3, we arrive at the same basic structure as found in the prose, and should consequently consider it as the original pāda sequence. *Tib*, on the other hand, has altered this authentic pāda sequence and thus has to be translated in a completely different way. None of the other versions, furthermore, show an equivalent to the particle *ji tsam* for **kiyat* as found in *Tib*.

²⁶⁸ *Ch*₂: “... by [use] of supernatural powers [he] resides in the upper vehicle” (以神通力住上乘).

²⁶⁹ *dPa' bo*, *vīra*, is only attested for *Tib*. It must designate the person dedicated to external worship. *Bth* (*rdzogs*) and *Ch*₂ (滿足) have *pūrṇa* instead: “for fully a thousand *kalpas*.” In *Tib*, *dPa' bo* appears again in 10.9. *Ch*₁ mentions the period only in 10.7, adds “bodhisattvas” to “*śrāvakas*” and reads 佛 instead of *narottama*.

²⁷⁰ Instead on *ācārya* both *Bth* (*spyod*) and *Ch*₂ (行) are based on *ācāra*; *Ch*₁: 佛. I have found the compound *vimānaśreṣṭha* only in the *SP*. For the meaning of *vimāna* see *PTSD*: “palace chariot.” *Ch*₂ attributes the first two pādas to the *kalpas*. Amoghavajra translated *kalpa* (劫) instead of *koṭi*.

²⁷¹ *Ch*₁ gives width and length of the palaces with 四十里, which corresponds to about 23 km.

²⁷² (1) Fragrances (*gandha*) and incense (*dhūpa(na)*) do not appear in *Ch*₁ (as in the prose of *Ch*₁). Instead, *Ch*₁ characterizes the palaces as “majestically decorated [and] furnished with many wonderful [things]” (嚴飾備衆妙). Instead of “excellently furnished with” (*rab ldan*), *Ch*₂ reads 供養, meaning “to venerate” (rendering a form of Skt. *upa-sthā?*).

(2) *bShams* in pāda d is a translation of *prajñapta* (cf. *Ch*₁: 施). The verb is missing in *Bth* and *Ch*₂. But cp. 10.6b where *Ch*₂ has 敷設 for *prajñapta*.

²⁷³ (1) The Skt. on which *dar dang bcos bu'i ras* (*Bth*: *dar dang gos*; *Ch*₁: (天)繪褥) is based, may be *paṭ(ṭ)adūṣya* (*Kpuṅ* 56.4f.: *nānāpattāduṣya-* ... *āsanāni prajñaptāni* /). More common is the compound *dūṣyapaṭ(ṭ)a*, which is analyzed as a *karmadhāraya*: *BHSD* s.v. *paṭa* (1): “some kind of *fine cloth*.” This is how *Ch*₂ understands the compound (妙繪綵; cf. *BWDJ* s.v. *paṭṭa*: 繪綵 for *paṭṭa*).

(2) Instead of *brgya* in pāda a, *Bth* reads *brgyan*. “Hundred” is also lacking in the Chinese versions. *brGyan* could be a translation of *alamkṛta*. That would explain 嚴飾備 of *Ch*₁ in the preceding pāda. *bTing* in pāda a of *Bth* should probably, as is indicated by the “colon” before it, be constructed with the following pāda, in the sense of “furnished” (**prajñapta*) with thrones and palanquins. Its counterpart appears in *Ch*₂ only in pāda b: 敷設. With the characters 敷其上 “spread over [the thrones],” on the other hand, *Ch*₂ would use a more specific term than *alamkṛta*. It thus is very likely that what appears as *brgya* in *Tib* results from *brgyan*, and that *bting*, which can be understood in two ways, namely “furnished with” or “spread with,” was consequently interpreted in the latter way.

(3) I understand *khri* as “throne” (**āsana*) and *khri stan* (*Bth*: *stan*) as “palanquin” (**samstara*). The palanquins are not mentioned in the verses of the Chinese versions, but appear in the prose of

River; [he] would present [these palaces with thrones] to each victorious one.”²⁷⁴

[10.7] “Upon the victorious ones who reside in world systems—those victorious ones more [numerous] than the sands of the Ganges River— [he] would thus bestow [these palaces, and] would venerate [them] all with appreciation.”²⁷⁵

[10.8] “If [on the contrary] some wise [person], having listened to this sūtra, learns only one single simile correctly, or having learnt [it], explains [it] to somebody [else, then] he will [produce] a greater amount of merit thereby [than the previous person].”²⁷⁶

[10.9] “Regarding the [former] merit seized by the hero [who worshiped the tathāgatas, it] does not come near by any tiny part or resemblance [to the merit of this wise person]. [The wise person therefore] becomes a refuge (*śaraṇa*) for all living beings, and he quickly attains excellent awakening.”²⁷⁷

[10.10] “The wise bodhisattva who reflects upon [the following]:
‘The *tathāgatagarbha* exists in the same way [in all beings]! This is the true nature (*dharmatā*) of all sentient beings,’
will quickly become an awakened one [through] his own power (*svayambhū*).”²⁷⁸

*Ch*₁. *gZhan rnams kyang* (*Bth*: *gzhan yang*) is probably a translation of *anyac cāpi* (*Ch*₂: 及餘). The pāda in *Ch*₁: “... according to the throne each [cloth] would be very different” (隨座各殊異).

²⁷⁴ *Ch*₁ instead of “each victorious one” has “the buddhas and [their] great communities [of bodhisattvas and *śrāvakas*]” (佛及大眾).

²⁷⁵ (1) Instead of *lokadhātu* *Ch*₂ has *kṣetra* (刹).

(2) *Ch*₁ is quite different: “[He] would venerate/bestow all with it, day and night without rest, fully a thousand millions of *kalpas* long. [Regarding] the merit [he thereby] gained, [the situation] would be such:...” Pāda a of *Ch*₁ corresponds with pāda d of all the other versions. Pāda b and d of *Ch*₁ have no counterpart in *TGS*₂. Pāda c, comprising the number of *kalpas*, appears in a similar form already in verse 10.3 of *TGS*₂. Since pādas b and c of *Tib* (= c and a in *Ch*₂ and *Bth*) repeat just what had been said in the preceding verse 10.6 and the position of the specification of the number of *kalpas* in *Ch*₁ (at the end of the description of the external worship) is identical with that in the prose of all versions, it is most likely that *Ch*₁ shows more resemblance to the original Skt. wording. In order to bridge over missing pādas *TGS*₂ might in fact have merely filled up the lacuna by repeating the pādas of the preceding verse. On the other hand, pāda d of *Ch*₁, when compared with the prose, appears too early and seems better placed in *Tib* and *Bth*, where it is part of verse 10.9 (pāda a in *Tib*; b in *Bth*).

²⁷⁶ (1) Instead of “learning” the sūtra, *Bth* speaks of its “preservation” (*’chang* for **dhārayati*). *Ch*₂ introduces a second verb in pāda b: “to take hold of one simile *and practice* correctly” (取於一喻而正行).

(2) My translation takes into account the particle *pas* at the end of verse 10.7, and therefore uses the comparative form “greater.”

²⁷⁷ (1) In *Ch*₂ pādas a and b are missing. *Vīra* (*dpa’ bo*) of *Tib*, as in 10.3, is not found in any of the other translations. *Ch*₂ identifies the refuge with the *TGS*: “Sentient beings take refuge in this sūtra...” (有情歸依於此經). In *Ch*₂ sentient beings (and not the wise person) attain awakening. In the Tibetan, however, it is not clear whether it is the wise person or living beings who are meant to attain awakening.

(2) After the first half, the verse seems to enter abruptly into a new theme. As this second half of 10.9 and the whole of verse 10.10 are not contained in the prose, it is quite likely that they are a later interpolation into the common ancestor of *TGS*₁ and *TGS*₂.

²⁷⁸ The verse in *Ch*₁: “The bodhisattva reflects about the very profound store of a tathāgata [and] knows that [it] is found [in] all living beings[. He/... and that they] will quickly realize supreme awakening (無上道).” *Ch*₂: “If a wise bodhisattva reflects about the qualities (法) connected (相應; **sāṃprayukta*, **sahabhū* or something similar) with this store of a tathāgata

[11 The story of *Sadāpramuktaraśmi and *Anantaraśmi]

[11A The appearance of *Sadāpramuktaraśmi]

“Vajramati, again, by way of this [following] kind [of exposition] (*pariyāya*), [one] should know thus: namely, that this Dharma discourse is extremely beneficial (*bahukara*) for bodhisattva-*mahāsattvas* [because it] will lead to the realization of the knowledge of an omniscient one (*sarvajñajñāna*).²⁷⁹

Vajramati, formerly, in the past, innumerable, vast, measureless, unimaginable, unparalleled and [quantitatively] inexpressible cosmic cycles [ago], [and] even more beyond the other side of that [time]—then, at that time—there appeared in the world the tathāgata, the honorable one and perfectly awakened one, named *Sadāpramuktaraśmi, realized in wisdom and conduct, a *sugata*, a world-knowing one, a charioteer of human beings to be tamed, unsurpassable, a teacher of gods and men, a buddha, an exalted one.”²⁸⁰

[thinking]: ‘All sentient beings [have?] the highest *dharmatā*,’ [then he] will quickly awake to spontaneous knowledge (自然智; *svayambhūjñāna*).” The same pāda sequence is also attested for *Bth*: “I have the *tathāgatagarbha*.’ Bodhisattvas who reflect [like that and the following]: ‘The *dharmatā* [belongs to] all sentient beings,’ [they] all without exception will become awakened ones [through] their own power.” *Bth* has *thams cad* instead of *myur du* in *Tib* (pāda d). I have no idea how to explain most of the differences which occur in pāda a. The readings *'dra* (*Tib*) and *bdag la* (*Bth*), however, could derive from the variants *sadr̥śa/mādr̥śa* or *sama/mama*.

Similar to verse 1.1, we may also here assume that the first pāda, composed in Buddhist Hybrid Sanskrit, originally had something like **sama(s) tathāgata garbha asti*, with *garbha* representing a locative form: “A tathāgata exists in the same way within [all living beings].” The translators, however, would have understood automatically *tathāgata garbha* as a compound and translated it accordingly.

The verse 10.10 (and the second verse half of 10.9) have no counterpart in the prose and they may well be a later interpolation into the common ancestor of *TGS*₁ and *TGS*₂. If we assume that at the time of the interpolation the term *tathāgatagarbha* in the meaning “tathāgata-embryo” was already prevailing, we could also understand the passage as rendered in Takasaki 1981: 34: ... すべての衆生の内に、この如来の胎児のごとき本性のあること....: “... the fact that in all living beings exists this real nature like a tathāgata-embryo....” The verse may well be an interpolated quotation from another sūtra.

Verse 10.10 summarizes the central message of the text and may have functioned as a verse at the end of the sūtra before the final description of the effect on the onlookers (12D). This would lead to the highly speculative assumption that sections 11A till 12C were interpolated into the main text at a later point.

²⁷⁹ The passage is neither contained in *Ch*₁ nor is there any counterpart in the following verses. Cf. the similar introduction to the story of Sadāparibhūta in the XIXth chapter of the *SP*: *anenāpi tāvan*¹ *Mahāsthāmaprāpta paryāyeṇaivam veditavyam yathā ya imam evamrūpam dharmaparyāyam* ... (375.1–2) [¹ *tāvat* is missing in *D*₁, *D*₂, *O* and *Q*]: *mthu chen thob rnam grangs 'dis kyang 'di ltar rig par bya ste....*. Similar constructions are also found in *SP* 43.2f. and 82.9f. For further discussions of similarities between the story of *Sadāpramuktaraśmi and the one in the *SP* see Zimmermann 1999: 159ff.

²⁸⁰ (1) Apart from the words printed in boldface and the additional *mtshungs pa med pa* (**asama*) and *brjod du med pa* (**an-/nir-abhilāpya*) in the *TGS*, the passage is in accordance with *SP* 375.9ff.: *bhūtapūrvam ... atūte 'dhvany asamkhyeyaiḥ kalpair asamkhyeyatarair vipulair aprameyair acintyais tebhyaḥ pareṇa paratareṇa yad āsit tena kālena tena samayena Bhīṣmagarjitasvararājō nāma tathāgato 'rhan samyaksambuddho loke udapādi vidyācaraṇa-sampannaḥ sugato lokavid anuttaraḥ puruṣadamyasārathiḥ śāstā devānām ca manusyāṇām ca buddho bhagavān....* *SP* 156.1ff is also similar; for the list of epithets see *MVy* 1–11 and *MPPU*_L I.115ff. The positioning of the name of the tathāgata in my translation corresponds with the Skt. of the *SP*, of *Bth* and *Ch*₁₂.

(2) *Ch*₁ adds *-rājan* to the name: (常放光明王). For another possible reconstruction of the name as *Sadāraśmimukta* see Zimmermann 1999: 159, n. 37.

[11B The light from the bodhisattva fills the world systems]

“Vajramati, why is that tathāgata called *Sadāpramuktaraśmi? Vajramati, immediately after the exalted one, the tathāgata *Sadāpramuktaraśmi, then a bodhisattva,²⁸¹ had entered the womb of [his] mother,²⁸² light was emitted from [his] body, while²⁸³ [he was still] within the womb of his mother, [so that] in the east hundreds of thousands of world systems, as many as the atomic-sized dust of ten buddha-fields,²⁸⁴ came to be constantly filled with brightness.²⁸⁵ In the same way, in the [other nine of the] ten directions, [namely] the south, the west, the north, the southeast, southwest, northwest and northeast, along with the nadir and the zenith, hundreds of thousands of world systems, as many as the atomic-sized dust of ten buddha-fields, came to be constantly filled with brightness. And owing to the pleasant and beautiful light from the body of that bodhisattva, [which] caused [sentient beings] to rejoice [and] led [them] to delight,²⁸⁶ as many as hundreds of thousands of world systems constantly came to be filled with brightness.”

[11C The light improves sentient beings]

“Vajramati, all sentient beings in the hundreds of thousands of world systems who were touched by the light from that bodhisattva within the womb of [his] mother attained strength (*ojas*), beauty (*varṇa*), mindfulness (*smṛti*), comprehension (*matī*), understanding (*gati*) and readiness of speech (*pratibhāna*).²⁸⁷

²⁸¹ *Ch*₁ runs 本行菩薩道時: “... when [he] practiced the path of a bodhisattva,...” Cf. e.g. *Kpuṇ* 46.17f.: ... *tathāgatena pūrvam bodhisattvacaryām caratā* ... = *Kpuṇ*_{C1} (174a13): 本行菩薩道時.

²⁸² Cf. *Kpuṇ*_{C2}: 降神母胎 (268b19; = *Ch*₁) for *avataraṇam mātur garbhe* (249.5): “descending into the womb of the mother.”

²⁸³ *bZhin du* does not appear in any of the other versions and I can only understand it in its function of forming a present participle (cf. *Jā* s.v. *bzhin* 2.): “while...” The parallel verse 11.1 runs ... *lus las 'di 'dra'i 'od* ... and *'di 'dra* must be interpreted differently; cf. the position of *tathārūpā* in the quotation of the *Lalitavistara* below in n. 285! There it has to be construed with *prabhā* ('od).

²⁸⁴ The Skt. was probably **daśa-buddha-kṣetra-paramāṇu-rajah-samā lokadhātavaḥ* (cf. e.g. *Kpuṇ* 11.8; 80.11: *sahasra-buddha-kṣetra*^o). The number of ten buddha-fields is also attested for *DbhS* C3. *Ch*₁ mentions only the illumination of [buddha-]fields, as many as the atomic-sized dust of a thousand buddha world systems in the ten directions (十方千佛世界微塵等刹). *Ch*₁ continues then with 11C, which incorporates the last issue of 11B regarding the pleasure of living beings at its beginning. Since the long-winded description dealing with the other directions is missing in *Ch*₁ and is not mentioned in the verses of *TGS*₂, it is plausible that it was only added at a later date to the prose of *TGS*₂.

²⁸⁵ The basic structure of the second half of this passage is found in the *Lalitavistara* (cf. *Lal*_{HK} 374.14–17): ... *bodhisattvena tathārūpā kāyāt prabhā pramuktābhūd, yayā prabhayāyam* ... *lokadhātur evam* ... *avabhāsenā parisphuṭo 'bhūt. bZhin du* in 11B.4 could be a translation of *tathā* after the second part (*rūpā*) had erroneously been read as *kāyā* (in many Indian scripts *rū* is similar to *kā*; *pā* is similar to *yā*) and dropped by a scribe who thought of it as a haplography as the following word was *kāyāt*.

²⁸⁶ *Ch*₂ has ... 光明令人適悅, 發生歡喜.: “... the light makes humans glad [and] full of pleasure.” In *Bth* the reason for the joy is not the light itself but the fact that the world systems were constantly filled with it. Accordingly, not the light but this fact is said to be beautiful.

²⁸⁷ (1) For *gati* in a set with *smṛti* and *matī* cf. *BHSD* s.v. *gati* (3) and *gatima(nt)*. *Ch*₁ has instead of this triplet 念、智成就. I am not sure if 智 renders *matī* or *gati*. *Ch*₂ shows an additional, fourth element beside *gati* (具行): 具智. *Ch*₁ adds, as a result, that all (living beings) became full of pleasure (一切歡喜) and their *klesas* vanished (煩惱悉滅). The first of these two additional element appears in *TGS*₂ in a more elaborated form at the end of 11B.

All sentient beings in the hundreds of thousands of world systems who had been born in hells, in animal existences, in the world of Yama and [as] demons (*naraka-tiryag-yoni-yama-lokāsuropapatti*)²⁸⁸ immediately [could] abandon (*cyavate*) their birth by virtue of being touched by the light from that bodhisattva, and were [re]born among gods and men.

Those [born as gods and men] by virtue of being touched [by the light], immediately became incapable of turning back from supreme and perfect awakening (*avaivartikā anuttarāyām samyaksambodhau*).²⁸⁹

In addition, all those incapable of turning back who had been touched by the light immediately, when touched by the light, attained intellectual receptivity [to the truth that] dharmas [have] no origination (*anutpattika-dharmakṣānti*).²⁹⁰ [They] also obtained the efficacious formulas (*dhāraṇī*) called ‘Chapter of the Five Hundred Qualities.’²⁹¹

[11D The light makes the world systems delightful]

“All those hundreds of thousands of world systems which had been touched by the light from the body of the bodhisattva within the womb of [his] mother came to be established as made of beryl,²⁹² laid out in [the form of] a chessboard with golden threads, [with] jewel trees coming out of each square, [the trees] having blossoms, fruits, fragrances and colors.²⁹³

When the jewel trees were shaken and moved by the wind, such pleasant [and] charming [sounds] came up as there are: the sound ‘Buddha,’ the sound ‘Dharma,’ the sound ‘religious community’ (*saṅgha*) [and] the sound ‘bodhisattva,’ along with the sounds ‘[five] powers (*bala*) of a bodhisattva,’ ‘[five spiritual] faculties’ (*indriya*), ‘[seven] branches of awakening’ (*bodhyaṅga*), ‘liberation’ (*vimokṣa*), ‘absorption’ (*samādhi*) and ‘attainment’ (*samāpatti*).²⁹⁴ Because of those sounds of the jewel trees,

(2) Instead of the touch by the light, *Ch*₁ continuously speaks of the “seeing” of the light. This is also the case in the following passage 11C.6 in *Bth* (*mthong ba*). That both possibilities are reasonable is documented by a passage in the *Kpuñ* dealing with the same context: ... *sarve tam avabhāsam paśyeyuḥ sprśeyuḥ samjāneyuḥ...* (239.1f.).

²⁸⁸ *Ch*₁ adds hungry ghosts (*preta*; 餓鬼) and speaks of the “[world of] Yamarāja” (閻羅王).

²⁸⁹ Both Chinese versions mention further the attainment of the five *abhijñās* (五神通).

²⁹⁰ For *anutpattikadharmakṣānti* cf. *BHSD* s.v. *anutpattika-dharma-kṣānti* and *kṣānti*.

²⁹¹ For **pañcaśatagaṇaparivartā dhāraṇyaḥ* (*Ch*₁: *pañcadaśa*-...; 五十功德旋陀羅尼) see e.g. *SP* 327.8: ... *koñinayutaśatasahasraparivartāyā dhāraṇyaḥ pratilambho 'bhūt* /. That not only ordinal numbers but, despite the grammatical standard, also cardinal numbers sometimes have *pa* can be proved by the index to the *SP* (*SP*₁ s.v., e.g., *trīṣat*, *pañca-śata*, *pañca-śat*, etc.).

²⁹² For ... *las grub pa* (Skt. *-maya*) see *MVy* 6477; *yongs su gnas par gyur te* for **parisaṁsthūā abhūvan* (cf. *Bth*: *g.yog par gyur to*): the translation *kun tu khebs pa* for *parisaṁsthūā* is found in the *SP* (see *SP*₁ s.v. *parisaṁsthūā*); also *BWDJ* s.v. *pari-sam-Sthā*: 成 = *Ch*₂. For similar descriptions cf. *SP* 65.8ff., 244.3ff. etc.

²⁹³ (1) In *Ch*₁₂ the fact that the trees come out from the squares is not mentioned. *Ch*₂ has 八行布列 instead, which I cannot understand. Cf. the similar passage *SP* 65.10f.: ... *vaidūryamayam suvarṇasūtrāṣṭāpadanibaddham* / *teṣu caṣṭāpadeṣu ratnavṛkṣā bhaviṣyanti* ... *ratnānām puṣpaphalaiḥ samarpitāḥ* //; cf. also *BHSD* s.v. *nibaddha*. For *aṣṭāpada* in the meaning of “chess-board” see Lüders 1940: 171f.

(2) Acc. to *Jā* the meaning of *ljon shing* is “a tree from paradise.” However, in translations from Skt. both *shing* and *ljon shing* simply render *druma*, *vṛkṣa*, etc.: “tree.” For the choice of one of the two phrases *metri causa* see Simonsson 1957: 192.4f.

²⁹⁴ The enumeration in *Ch*₁: 三寶、菩薩功德、根、力、覺道、禪定、解脫. *Bth* and *Ch*₂ have *bodhi* instead of *bodhisattva*. *Tib* takes *samādhi* and *samāpatti* as two different parts. In the Skt. the compound *samādhisamāpatti* may also be understood as a *tatpuruṣa*.

sentient beings in all of the hundreds of thousands of world systems became and remained satisfied and joyful. In all the buddha-fields the hells, animal existences, the world of Yama, and the world of the demons (*asurakāya*) disappeared.²⁹⁵

The bodhisattva within the womb of [his] mother emitted light like the disk of the moon for all those sentient beings. Three times a day and three times a night [they] raised their joined palms [to pay homage] while [he] was still in the womb.²⁹⁶

[11E Why the bodhisattva is named ‘*Sadāpramuktaraśmi’]

“Vajramati, when that bodhisattva had been born, had set out for ascetic life (*abhiniṣkramaṇa*), and [finally] completely awakened to buddhahood (*bodhim abhisambuddhaḥ*),²⁹⁷ light continued to be emitted in such a way from the body of that bodhisattva. Even after [his] complete awakening, light continued to be emitted from the body of that exalted one. Even when the exalted one entered into *parinirvāṇa*, that light [from] his body continued to be emitted in the same way.²⁹⁸ [And] even after that tathāgata had entered *parinirvāṇa* and [his body] remained [as] relics (*dhātu*) in a stūpa, the light [from his] body [still] continued to be emitted. For this reason, Vajramati, that exalted one is named the ‘Always Light-Emitting One’ (*Sadāpramuktaraśmi) by gods and men.”

[11F The bodhisattva *Anantaraśmi questions the buddha *Sadāpramuktaraśmi]

“Vajramati, under the rule (*sāsana*) of that exalted one, the tathāgata, the honorable one and perfectly awakened one, *Sadāpramuktaraśmi—right after [he had become] completely awakened—there appeared a certain bodhisattva

²⁹⁵ (1) *Ch*₁ states that listening to these sounds, all attained “pleasure in the Dharma, that [their] faith became solid [and that they] got forever rid of bad paths (= existences).” (... 法喜, 信樂堅固, 永離惡道。). *Ch*₂: ... 獲得法喜、禪悅。: “[They all] attained pleasure in the Dharma [and] delight in the absorptions.” For the common list of bad births cf. e.g. *SP* 151.9f: *apagata-niraya-tiryagyoni-yamalokāsura-kāyam*. For *asurakāya* cf. *CPD* s.v. *asura-kāya*: “the *asura* world (sphere).”

(2) I have refrained from translating *yang* in 11D.11, 13, 16 and 11F.1. It is probably rendering Skt. *api* and indicates a change of subject.

²⁹⁶ *Ch*₁ makes very clear that living beings are the ones who pay homage to the bodhisattva, and not the bodhisattva himself (... 一切衆生蒙光明故, 晝、夜六時合掌, 恭敬。). The comparison with the moon is missing. In *Ch*₂ it is the bodhisattva who is said to stay in the womb in the *añjali* position (directed to the buddhas?) (是彼菩薩, ... 合掌而住晝、夜六時常放光明乃至誕生。). “Six times” is connected with the emission of the light. The mentioning of the bodhisattva’s birth appears in the other versions at the begin of the next section. To divide 24 hours into six periods seems to be common Indian usage. See e.g. *MPPU*_L I.416 and *MSA* XX.56 (*ahorātram ṣaṭkṛtvah*) (=MS X.23).

²⁹⁷ I am not sure how to translate the verb *btsas pa*. *Bth* has *sems bskyed¹ pa* [¹ for *bskyes*] instead. In *Ch*₂ the phrase is, as said above, incorporated into the last sentence of 11D (乃至誕生). *Ch*₂ then continues: ... 亦初生已便成正覺。: “... and immediately after being born, [he] realized perfect awakening.” *Ch*₁ corresponds to *Tib*: ... 處胎出生乃至成佛、無餘泥洹, Both Chinese versions are lacking a counterpart to *abhiniṣkramaṇa*.

²⁹⁸ *Bar du* could be a translation of *yāvat, antasah* or *antataḥ* (“even, indeed”), which also has an equivalent in *Ch*₂ (乃至). *Bth* in 11E.5 reads *gzhung*, which should probably be emended to *chung*. *Chung ngu* appears in 7B.3 in *Bth* instead of *tha na ... kyang rung ste* in *Tib* and probably renders *antasah*.

named *Anantaraśmi.²⁹⁹ [He was accompanied] by a retinue (*parivāra*) of a thousand [bodhisattvas].³⁰⁰ And, Vajramati, that bodhisattva *Anantaraśmi questioned the exalted one, the tathāgata, the honorable one and perfectly awakened one, *Sadāpramuktaraśmi, with reference to this Dharma discourse [called] *Tathāgatagarbha*.”

[11G *Sadāpramuktaraśmi teaches the TGS]

“In order to benefit (*anugraha*) the bodhisattvas and to win [them] over [to his side] (*parigraha*),³⁰¹ the exalted one, the tathāgata, the honorable one and perfectly awakened one, *Sadāpramuktaraśmi thereupon perfectly explained this Dharma discourse [called] *Tathāgatagarbha* for five hundred³⁰² great cosmic cycles, remaining³⁰³ in the same seat (*ekāsane niṣaṇṇaḥ*). And because he perfectly explained to the bodhisattvas this Dharma discourse [called] *Tathāgatagarbha*³⁰⁴ in intelligible (**vijñeya*) words [and by employing] various means (**(abhi)nirhāra*) [with regard to the] Dharma, explanations (*nirukti*) and hundreds of thousands of similes,³⁰⁵ [the bodhisattvas] in all world systems in the ten directions, as many as the

²⁹⁹ (1) *Dang po* in 11F.2 (*Bth*: *thog mar*) is a formal translation of a Skt. construction with *prathama* as adverb. See *PW* s.v. *prathama* (2): “... eben, alsbald, sogleich”; e.g. *Vin* I 1 (line 2f.): ... *buddho ... viharati ... paṭhamābhisambuddho*.

(2) The name Anantaraśmi (*'Od zer mtha' yas*; *Bth*: *Med pa'i 'od gzer*; *Ch*₁: 無邊光; *Ch*₂: 無量光), “[the one whose] light [is] endless,” appears in a list of names of tathāgatas in *Kpuṇ* 158.16 (*Q* 221a2f: *'Od zer mtha' yas*; *Kpuṇ*_{Ch12}: 無量光明).

³⁰⁰ (1) Instead of a retinue of a thousand, *Bth* speaks of only twenty, whereas the Chinese versions have twenty *kotis* of bodhisattvas.

(2) Similar constructions are found in e.g. *SP* 20.15: *tena khalu punar Ajita samayena tasya bhagavataḥ sāśane varaprabho nāma bodhisattvo 'bhūt* or *SP* 377.9ff.

³⁰¹ (1) *Bth* and *Ch*₁ document that this part (**teṣāṃ bodhisattvānām anugrahāya/part*^o) was found at the end of the first sentence. It could therefore be combined with the following unit (so did *Bth*; *Ch*₂ even associates the first sentence with parts of the following unit).

(2) For *anugraha* and *parigraha* *Ch*₁ has simply 護念: “to protect [them under his shelter and] to think [of them](?)”

³⁰² *Ch*₁ reads “for fifty great kalpas” (經五十大劫).

³⁰³ For *'dug bzhin du* in 11G.3 cf. n. 283.

³⁰⁴ *Ch*₁: “Mahāyāna sūtra [called] *Tathāgatagarbha*” (如來藏大乘經典).

³⁰⁵ As in 5B, also here the lists vary according to the versions, and it is impossible to decide on the original form of the Skt. As usual, *Ch*₁ is very short: “numberless causes [and] hundreds of thousands of similes” (無數因緣、百千譬喻). I do not know what is meant with “causes” (cf. also the citations from the *SP* below: *hetu-kāraṇa*). *Bth* lacks a counterpart for *dharmā*, which appears in both *Tib* and *Ch*₂. I am not sure if *Bth*: *rtsa ba* or *brjod pa* (for *abhilāpa*?) should be taken as a translation of *nirukti*. *Ch*₂: “... with various phrases, discernment concerning the Dharma, unhindered readiness in speech (*asaṅgapratibhāna*), and hundreds of thousands of similes” (以種種句、於法了別、無礙辯才、百千譬喻). As in 5B, I suggest that also this list is closely connected with the concept of *upāyakaśālyā*. Similar enumerations can be found in the *SP*, e.g., 29.8f.: [O adds: *nānā-]vividhopāyakaśālyā-jñānadarsana-hetu-kāraṇa-nirdeśanārambaṇa-nirukti-prajñāpti* [O: *-vijñāpti* for *prajñāpti*]; 39.11: *nānā-nirukti-nirdeśābhilāpa-nirdeśana* [O: *-nidarsana*]; 41.2f: *nānābhīnīrāra-*[O adds: *nānā-]nirdeśa-vividha-hetu-kāraṇa-nidarsanārambaṇa-*[O adds: *nānā-]nirukty-upāyakaśālyā*. Cf. also *TUSN Q* 141a5–6 (=T 278: 631a7–9 and T 279: 278c2–3) where a group of bodhisattvas is said to teach the same law (*dharmatā*) of the Tathāgata in the following terms: ... *thams cad na 'ang de bzhin gshegs pa 'i mnga' mi 'phrogs pa 'i chos nyid tshig 'di dag nyid dang yi ge 'di dag nyid dang / nges pa 'i tshig mngon par bsgrub pa 'di dag nyid kyis don 'di nyid brjod de lhag tshad med par brjod do //*.

atomic-sized dust of ten buddha-fields, understood [this Dharma] easily (*alpakṛcchra*).³⁰⁶

[11H Four bodhisattvas do not attain awakening]

“Vajramati, in this [connection] the roots of virtue (*kuśalamūla*) [of] all the bodhisattvas who heard this Dharma discourse [called] *Tathāgatagarbha*, [or] even (*antaśah*) only the title *Tathāgatagarbha*, successively (*anupūrveṇa*) came to maturity. Then, in such a way that the marvelous manifestation of the excellent qualities [of their buddha-fields] conformed to their [roots of virtue, these bodhisattvas] attained supreme and perfect awakening—apart from four bodhisattva-*mahāsattvas*.³⁰⁷

Vajramati, if you think that then, at that time, the bodhisattva *Anantaraśmi was somebody other [than yourself, you] should not see it this way! Vajramati, you yourself were then, at that time, the bodhisattva *Anantaraśmi!³⁰⁸ Who are the four bodhisattvas who under the rule of that exalted one³⁰⁹ have not attained supreme and perfect awakening to buddhahood up until today? The four are the bodhisattvas Mañjuśrī, Mahāsthāmaprāpta, Avalokiteśvara and you yourself, Vajramati!

Vajramati, this Dharma discourse [called] *Tathāgatagarbha* is thus of great benefit, since listening [to it leads] immediately to the realization of buddha-knowledge (*buddhajñāna*) for bodhisattva-*mahāsattvas*.³¹⁰

[11I]

Then at that time the Exalted One uttered these verses:

³⁰⁶ Instead of ten buddha-fields, *Ch₁* has a hundred thousand buddha-fields, in which the tathāgata’s voice is heard (其音普告十方...). *Ch₂* speaks of hundreds of thousands of *koṭis* of world systems. *Ch₁* does not mention that the bodhisattvas attain understanding.

³⁰⁷ For the expression *yon tan bkod pa de ’dra ba nyid du* (*Bth*: ’di ’dra ba ’i yon tan mang pos), Skt. *guṇavyūha*, cf. *BHSD* s.v. *vyūha* (2). I take *nyid du* to be the rendering of the instrumental case of an abstract noun (*-tayā* or *-tvena*): “in such a way that...” *Ch₂* reads: “... each attained perfect awakening in a different [buddha-]field” (... 各於異國而成正覺, ...). *Ch₁* does not mention the roots of virtue, has no equivalent for *guṇavyūha* or the different buddha-fields, and does not add the hearing of only the title of the sūtra. Instead, the propagation and preservation of the sūtra along with the practice according to its teaching are mentioned (... 聞說此經, 受, 持, 讀, 誦, 如說修行。).

³⁰⁸ For a similar passage see *SP* 22.8ff: *syāt khalu punas te ... kāṅkṣā ... / anyah sa tena kālena tena samayena Varaprabho nāma bodhisattvo mahāsattvo ’bhūd ... / na khalu punar evam draṣṭavyam / tat kasya hetoḥ / ... tvam eva ... nāma bodhisattvo ’bhūt...*

³⁰⁹ The specification “under the rule of ...” is missing in *Ch₁*. “Rule” for *sāsana* could in these cases also be replaced by “teaching.”

³¹⁰ (1) For this last sentence cf. *SP* 383.3–6, cited in Zimmermann 1999: 160. Immediately before this passage, which emphasizes the benefit of the *TGS*, it is spoken about the four bodhisattvas who could not attain awakening. In that position, this final sentence is thus somehow contradictory. Also in the passage in the *SP* the passage appears at the end of a prose section. There, however, it follows upon the description of the attainment of awakening by a large group of persons. The inconclusive arrangement of the passage in the *TGS* could document the strategy of the authors to follow closely the main structure of the parallel in the *SP* without paying sufficient attention to differences in content.

(2) *Ch₁* does not refer to the bodhisattvas. Instead of buddha-knowledge, it mentions the awakening to buddhahood (佛道).

(3) Only the Tibetan versions stress the *immediate* result of listening to the sūtra. Whereas *Tib* could also be interpreted as “just by listening” (*thos pa tsam gyis*), *Bth* uses *ma thag tu* in a clear temporal sense. The Skt. probably had a construction with °*mātreṇa*.

- [11.1] “In the past, endless cosmic cycles ago, the exalted one *[Sadā]pramuktaraśmi appeared. From such³¹¹ light being emitted from his body, myriads of [buddha-]fields³¹² came to be illuminated.”
- [11.2] “At that time, right after [that] victorious one had attained complete awakening,³¹³ the bodhisattva *Anantaraśmi asked that *sugata*, victorious one and master³¹⁴ [for this discourse, and the latter then] perfectly [and] without pause explained this sūtra.”
- [11.3] “All those who happened to hear this sūtra personally from the leader, under the rule (*śāsana*) of that [same] victorious one,³¹⁵ quickly attained noble awakening—apart from four bodhisattvas:”
- [11.4] “Mahāsthāmaprāpta, Avalokiteśvara [and], third, the bodhisattva Mañjuśrī. And you yourself, Vajramati, are the fourth! At that time they [all] heard this sūtra.”
- [11.5] “The bodhisattva *Anantaraśmi, who at that time had questioned the victorious one [about the *Tathāgatagarbhasūtra* and who] had been tamed by that [same victorious one]³¹⁶ —[this] son of a *sugata*, Vajramati, was at that time yourself!”³¹⁷
- [11.6] “I, too, when [I] formerly practiced the path [of a bodhisattva],³¹⁸ happened to hear the title of this sūtra from the *sugata* Simhadhvaja. [And] having heard [it] with appreciation [I] raised my joined palms.”³¹⁹

³¹¹ As already in the prose of 11B (cf. my n. there), the translation of 'di 'dra in this passage is problematic. Both Chinese versions have 常 instead.

³¹² *Ch*₁: “innumerable fields” (無量土); *Ch*₂: “worlds, hundred thousands of *koṭis* [in number]” (俱胝百千界).

³¹³ I take *rig* to be a short form for *abhisambuddha* (cf. *Ch*₂: 成; *Bth*: *chud*). Alternatively, *rig* could also be a mistake for *reg* (Skt.: *sprśati*) in the common formulation *bodhim sprśati* (cf. e.g. *SP*₁ s.v. *√sprś*). *Thog mar* probably renders *prathamam* (cf. n. 299 above): “right after...”

³¹⁴ *dBang* is here probably short for *dbang po* (**indra* or something similar); *Ch*₂: 法王.

³¹⁵ (1) With the variant *las* instead of *la* (11I, fn. 20), the text should be understood as follows: “All those who happened to hear this sūtra *from the teachings* of...” That this can hardly be the original sense of the pāda is attested by *Ch*₂: 當彼佛時 ... (“At the time of that buddha...”) and the parallel in the prose 11H.10: *bcom ldan 'das de 'i bstan pa la* (*Ch*₂: 彼佛世時).

(2) Only in *Tib* the leaders are mentioned (*Bth*: *dran pa*, to be emended?). Instead of *mngon sum* (**pratyakṣa*) *Bth* has *mngon du (ba)*; *Ch*₂: 從於(彼佛) seems to render simply **sakāśāt*, *antikāt* or something similar; *Ch*₁: 其有遇最勝 (“Those [who] encounter the victorious one [and hear]...”).

³¹⁶ I take *dbang byas* to be a short form for *dbang du byas pa* rendering *vaśikṛta* or *ādhipateya*°*patya* (cf. *Bth*: *dbang po*). In 11F *Anantaraśmi is said to appear under the rule (*śāsana*) of the tathāgata *Sadāpramuktaraśmi. The expression with *ādhipatya* could, with other words, underline this superior position of that tathāgata. Takasaki (1981: 39) offers another interpretation of *dbang byas*: 勝利者に質問して、その(経を)自在にした善逝の子、....: “... the son of a victorious one, [who] asked the *sugata* and [by this way] empowered that (sūtra),....” However, Takasaki’s interpretation does not correspond to *Ch*₁ which with 第一 refers to the bodhisattva. *Ch*₂ is without any equivalent.

³¹⁷ *Ch*₁: “[You,] Vajramati, being him, the foremost [among the bodhisattvas], the son [with] supernatural powers, were at that time called ‘*Anantaraśmi,’ who had already questioned for this sūtra!” *Ch*₂ consists only of three pādas, omitting the pāda which states that the bodhisattva had questioned with reference to the sūtra.

³¹⁸ *sPyad pa spyod pa* may refer to the practice of a bodhisattva, directed to supreme awakening, as is the case in *SP* 382.6: *bodhisattvacaryām carantu* or *SP* 383.13 (= IXX.3d): *yūyam hi caryām carathāgrabodhaye* // ; cf. also *BHSD* s.v. *cari*. *Ch*₁: 求道: “to search the path”; *Ch*₂: 行勝行: “to practice the highest path.”

³¹⁹ *Ch*₁ mentions the sūtra itself (and not its title), which the narrator had attained from the buddha *Simhadhvaja*. As in its prose (11H), *Ch*₁ then states that it was taught and practiced

[11.7] “By those well-done deeds³²⁰ I quickly attained noble awakening. Therefore wise bodhisattvas should always learn this excellent sūtra!”³²¹

[12A Ānanda questions the Buddha about the length of time till perfection]³²²

“Vajramati, [when] sons and daughters of good family who are restricted by obstacles [caused by their] deeds (*karmāvaraṇa*) listen to this Dharma discourse [called] *Tathāgatagarbha*, [and when they] show (*uddiṣati*), recite (*svādhyāyati*) or teach [it, then]—with regard to listening to this Dharma discourse, showing [it], reciting [it], explaining [it] and copying [it]—they will all, seeing the Dharma before their eyes (**pratyakṣa*), easily (*alpakṛcchra*) become purified [from] the obstacles [caused by their] deeds.”³²³

Then the venerable Ānanda asked the Exalted One the following:

“Exalted One, [as for] those sons and daughters of good family who are not restricted by obstacles [caused by their] deeds and [who] apply [themselves] (**prayujyate*) to this Dharma discourse, from how many buddhas, exalted ones, [do they preserve] expositions of the Dharma as [persons of] great learning (**bāhuśrutya*) so that [they] become perfected (*niryāta*)?”³²⁴

according to the sūtra. The verse 11.6 differs from the correspondent prose, as the narrator, namely the Buddha, speaks about himself and not about the bodhisattvas.

³²⁰ *Ch*₁: 善根 and *Ch*₂: 善根業 are based on the term *kuśala-mūla*. *Kuśala-mūla* appears also in the parallel prose 11H of *Tib*, *Bth* and *Ch*₂.

³²¹ As in the preceding verse, *Ch*₁ mentions the necessity to teach the sūtra in addition to its preservation (持). The bodhisattvas are not characterized as “wise.” *Ch*₂, however, speaks only of the wise (智者) and does not mention the bodhisattvas. In order to attain an even number of pādas, *Ch*₂ had to fit c and d into one pāda, which probably led to the omission of “bodhisattvas.”

³²² Sections 12A and 12B are missing in *Ch*₁.

³²³ (1) The basic structure of this passage remains obscure in the Tibetan. I therefore follow *Ch*₂, which clearly marks the second enumeration of propagandistic measures as the reason for the purification from the obstacles: 由彼聞此經典... (For a detailed comparison of the passage transmitted in the Tabo manuscript (*A*) and the other representatives of *Tib* cf. my section C 2.6.) *Ch*₂ seems to be based on *udgrhṇāti* (受持) instead of *uddiṣati*. However, combinations of forms of *ud-diṣ* and *svādhyā* are found frequently in e.g. the *SP* (cf. *SP*₁ s.v. *uddeśa-svādhyāya* etc.); for the translation 受持 for *uddeśa* cf. *YBhū*₁ s.v. 受持 (for *uddeśa*) and 受持演說聲 (for *uddeśa-svādhyāya-deśanā*---*śabda*). The translations of *uddiṣati* as *lung nod* (“to receive instructions”) and 受持 (“to receive and keep”) stress the *receipt* of the teaching. This would fit very well into the sequence ‘receiving (*uddiṣati*) – recitation – teaching’ in the text above. In *CPD* s.v. *uddiṣati* the following meaning is mentioned: “... 2.b esp. to point at (somebody as one’s teacher), acknowledge somebody as spiritual master...” Should we thus translate *uddiṣati* as “to accept/adopt [the sūtra as an authority]”?

(2) The position of *de dag kyang* (12A.5) between *chos* and *mngon sum du 'gyur* is disturbing. *Bth* has no equivalent for it.

(3) *Pratyakṣa* in this context could mean the direct experience or vision of the tathāgata in all living beings; *Ch*₂: 佛法現前.

(4) Whilst *Tib* is speaking of the *purification* (*byang ba*) from the obstacles, *Bth* (*zad pa*) and also *Ch*₂ (銷滅) have their *destruction*.

³²⁴ (1) The negation in 12A.8 (*bsgribs par mi 'gyur*) does not make sense. In *Ch*₂ a negation is not found. *Bth* has an insertion (→ ... ←) which renders a negation reasonable and could well be an original element: → *las kyi bsgrib pa bsgribs pas : de bzhin gshegs pa 'i snying po chos gzhung 'dī nyan pa dang : ston par dang : khadon du bgyis pas : ← las bsgrib pas : bsgrib pa ma mchis par gyur to* : “... those ... restricted by obstacles ... become unrestricted by obstacles ... through listening to this...” *Bth* then continues: “The one who becomes perfected (*'byung ba*) through this

The Exalted One said:

“Ānanda, there are sons and daughters of good family as well who are [already] perfected on account of having preserved expositions of the Dharma from a hundred buddhas.”³²⁵

[12B Perfection through preserving expositions of the Dharma from myriads of buddhas]

“Ānanda, [but] there are also sons and daughters of good family who are [only] perfected on account of having preserved expositions of the Dharma from two hundred buddhas, three hundred, four hundred, five hundred, one thousand, two thousand, three thousand, four thousand, five thousand, six thousand, seven thousand, eight thousand, nine thousand, ten thousand or a hundred thousand buddhas, [or] even myriads of buddhas.”³²⁶

Ānanda, a bodhisattva who preserves this Dharma discourse, recites [it], perfectly teaches [it] in detail also to others and preserves [it] as a book³²⁷ should bring forth this thought: ‘I [wish to] attain supreme and perfect awakening already now!’ He is worthy of the homage and veneration of the world with [its] gods, humans and demons (*asura*), as I [am] now.’³²⁸

[12C Homage to the one who holds the TGS in his hands]

Then at that time the Exalted One uttered these verses:³²⁹

exposition of the Dharma will definitely (**niyatam*) be a [person] of great learning among the buddhas, exalted ones and teach the Dharma.” A counterpart for **niyatam* does not appear in the other versions. It could be a mistake for the particle *kīyat* since there is no question expressed in *Bth*. This part of the text in *Bth* can hardly represent the Skt. original, as the following answer by the Buddha would remain without question.

(2) It seems that Ānanda, who usually in Mahāyāna sūtras is “only” a *śaikṣa*, thinks mainly of himself when inquiring about the number of buddhas from whom one should collect Dharma expositions, since the term *bāhuśrutya* is usually connected with him (see *MPPU_L* I 22). Besides, he is often entrusted with the preservation of an exposition at the end of it. On the term *bāhuśrutya* expressing the “passive aspect” of the Mahāyāna initiate see Harrison 1978b: xx-xxi.

(3) I take *nges par 'byung ba* to be a translation for *niryāta* (cf. *BHSD* s.v.). *Bth* has *'byung ba* in all instances. Here and in all following passages, *Ch₂* does not have any equivalent for it.

(4) The passage in *Ch₂*: “Exalted One, those sons and daughters of good [family] who are restricted by ..., [under] how many buddhas, exalted ones can they increasingly preserve (加持) expositions of the Dharma, attain great learning (多聞), and become bound (相應; **prayoga*) to this Dharma discourse?”

³²⁵ (1) *Kun tu bzung ba* in *Tib (Bth)*: *'chang ba*; emended for *'chad pa* could be a translation of *saṅgraha* (“keeping, bringing together, collecting”), *saṁdhāraṇa* (“holding together, maintaining”) or *ādharāṇa* (“bearing, holding”).

(2) *Ch₂*: “Ānanda, [there are] sons and daughters of good [family] who can increasingly preserve expositions of the Dharma under a hundred buddhas,....”

³²⁶ The number of years differs in the versions. Both *Ch₂* and *Bth* speak of 200,000 instead of 100,000 and, again, insert between the numbers the standard phrase of the attainment of perfection due to preserving expositions (so *Bth*; in *Ch₂* simply 加持說法). In *Ch₂* the end of the passage is different from the Tibetan and also from the standard pattern in *Ch₂* before: “... or there are myriads of buddhas under [whom they] received expositions of the Dharma, [to which they] listened [and which they] preserved.”

³²⁷ The sequence in *Ch₂*: “Ānanda, if a bodhisattva obtains this Dharma [exposition called] *Tathāgatagarbha*, writes [it] down, recites [it], preserves [it], reflects about its meaning [and] explains [it] widely to others, then that bodhisattva should have this thought:....”

³²⁸ Lacking the comparison “as I am now,” *Ch₂* ends the section in the following way: “After the Buddha had said this, [the onlookers] were pleased, [shouting] ‘Bravo!’”

³²⁹ The introduction to the verses in *Ch₂* differs from the formulas before, by adding 復.

- [12.1] “When a bodhisattva has heard this sūtra, [he] thinks:
‘I [wish to] attain the noble awakening!’
He in whose hands this sūtra is found is worthy of the homage of the world, as I [am now].”³³⁰
- [12.2] “[Being himself] a protector of the world (*lokanātha*) [and] training [sentient beings], he is worthy of the praise (*praśamsya*) [of] the leaders (*nāyaka*) [and] trainers (*vināyaka*). Thus he in whose hands this sūtra is found should be called ‘king of the Dharma.’”³³¹
- [12.3] “He in whose hands this sūtra is found is worthy of being looked upon [as] the best of men (*puruṣarṣabha*), [as] bearer of the lamp of the Dharma (**dharmolkādhārin*) [and] like the full moon. Like a protector of the world, [he is] a foundation [worthy] of being paid homage.”³³²

[12D Delight and praise of the onlookers]

After the Exalted One had spoken thus, the bodhisattva³³³ Vajramati, the entire multitude of bodhisattvas, the great *śrāvakas*, the four assemblies and the world with [its] gods, humans, demons and celestial musicians were delighted, and praised [what] the Exalted One had said.³³⁴

[Here] ends the Holy Mahāyāna sūtra called *Tathāgatagarbha*.

[13 Tibetan colophon]

The Indian master Śākyaprabha and the Venerable Great Reviser and Translator Ye shes sde have executed [this] translation and revised and established [it] definitively.³³⁵

³³⁰ (1) In *Ch*₂ the comparison with the Buddha himself is missing.

(2) The first verse half in *Ch*₁ (continuing the verses 11.1 till 11.7): “Having heard [this sūtra] and practicing as [it] was taught, [the bodhisattvas] become buddhas just as I [am] now.”

(3) For a repetitive construction similar to the formulation “He in whose hands this sūtra is found,....” (12.1, 12.2, 12.3) in a relative clause cf. *SP* 292.11ff. (=XX.5, 6, 9, 10, 11) quoted in Zimmermann 1999: n. 44. There the act of preservation of the sūtra is expressed with the verb *dhārayati*.

³³¹ The versions differ considerably. *Tib*: *rnam par* in pāda a could result from a revised *rnams* as it is still found in *Bth*. *Ch*₂: “The one in whose hands the sūtra comes: the buddhas, exalted ones [and] great leaders praise that human as the highest among humans and call [him] ‘most eminent king of the Dharma.’” *Ch*₁: “The one who attains this sūtra is called ‘king of the Dharma of the buddhas.’ Being then a protector of the world, [he] is praised by the buddhas.”

³³² (1) Instead of *mi yi khyu mchog* for **puruṣarṣabha* (*Ch*₂: 世雄) *Bth* has *bsrung* (deriving from the verb *rakṣati*?) *Ch*₁ reads 世間眼 (**lokākṣan*) for the whole expression in pāda b of *Tib*.

(2) *gNas* in pāda d has no equivalent in any of the other three versions and can hardly be an original element.

(3) Instead of “worthy of being looked upon like the full moon” *Ch*₂ has “shining like the full moon” (照曜如滿月). *Ch*₁ repeats the same statement as in the preceding verse instead, stating that the person is called a *dharmarājan*: 是人名法王.

³³³ *Ch*₂ adds *mahāsattva*.

³³⁴ The sentence appears in slightly modified forms at the end of many Mahāyāna sūtras (cf. e.g. *SP* 487.1–5; *Kpuṇ* 420.4–6; *Suv* 250.8ff; *Sukh* 66.23ff.). The reconstructed Skt. of the *TGS* may be: **idam avocad bhagavān / āttamanā Vajramatir bodhisattvaḥ sa ca sarvāvān bodhisattvaganas te ca mahāśrāvakās catasras ca parṣadaḥ sadevamānuṣāsuraḥ gandharvaś ca loko bhagavato bhāṣitam abhyanandann iti //*. *Ch*₂ does not mention the four assemblies and the *gandharvas*. Instead it has 等 at the end of the enumeration. In *Ch*₁ the *mahāśrāvakas* remain unmentioned.

³³⁵ The colophons are discussed in section C 3.3.

Part II

Critical and Diplomatic Editions

of the

Tathāgatagarbhasūtra

C The Textual Materials

The appearance in the last years of several studies dealing with Kanjur manuscripts and prints makes it unnecessary in the following to repeat what already has been stated about the history of the various editions. I will concentrate my remarks on the legibility, appearance and orthography of the texts. For studies dealing with the history of the Kanjurs, and for particular case studies, see the publications of Braarvig, de Rossi Filibeck, Eimer, Hahn 1988, Harrison, Imaeda, Schneider, Schoening, Silk, Skilling and Zimmermann 1998 cited in my bibliography.

1 Information on the Tibetan Manuscripts and Xylographic Editions Utilized

• A – The Tabo Manuscript Fragments

The fragments of the *TGS* among the Tabo manuscripts cover about 40 percent of the whole sūtra. The fragments are very likely to be the oldest among the Tibetan materials utilized in this study. Steinkellner states that “a considerable portion” of the 35,500 folios assembled were written in the eleventh and twelfth centuries.¹ The manuscript of the *TGS* is carefully written in *dbu can* hand, with only very few mistakes, eleven lines to a folio, and is nearly free of damage of the type affecting legibility. Every folio has two string holes near the center of its left and right halves, each with a diameter of about five letters.

The orthography exhibits particularities well known from Dunhuang and other Tabo manuscripts:

- the *ya btags* in all words beginning with *m-* followed by the vowel *i* or *e* (e.g. *myed, myi* etc.),
- the *da drag* (e.g. *bskald, mkhyend, gyurd, stond, bstand, 'drend, stsald, zhend, shard* etc.),
- the *mtha' rten 'a* (*mdo', 'dra', dpe'*),
- occasionally a reversed *gi gu*,
- the spelling *las stsogs pa* for *la sogs pa*,
- in some cases *cen* instead of *chen*,
- *ba(r)* instead of the regular *pa(r)* when the preceding syllable ends with *-n*: *mngon bar, ldan ba, brtson ba, yin ba*, but never in *rkun po, mgon po, snyan pa, 'thon pa, 'dron po, chen po, ljon pa* or *'brog dgon pa*,
- *ba* instead of the regular *pa* when the preceding syllable ends with *-m*: *bcom ba, zhim ba, gsum ba* but never in *dam pa* or *rnam pa(r)*.²

¹ Steinkellner 2000: 319. Further, see the contributions in Scherrer-Schaub and Steinkellner 1999; Steinkellner 1994.

² These and other archaic features are attested for Dunhuang materials; see e.g. Terjék 1969, Harrison 1992a: xxi, n. 43 and Schoening 1995a: 187f. As Schoening has shown in his study (esp. 147ff., 188), there is no homogeneity in the Dunhuang materials regarding these characteristics. We therefore have to be careful not to hastily conclude that all features appearing in those materials are archaic. The two questions why and when in old materials the regular *pa* after final *-n* becomes *ba*, and also why we often find *ba* after final *-m*, definitely deserve further investigation. That there is nothing like a standard for spellings among these old manuscripts and that even in one and the same text we find different spellings is attested by *A*, which has *bskald pa*

The accuracy of the scribe of *A* is further confirmed by the fact that at the end of a sentence immediately before the beginning of a new verse he has employed a triple *shad* instead of the usual *nyis shad*. *Tsheg* is always set before the *shad*. The gap between the *shad* and the following letter is of about one letter. The copyist made sporadic use of the *anusvāra*-like abbreviation for *m* in the words *thams*, *rnam*, *rnam̐s*, *sem̐s* and *'am̐*. Further worth mentioning is the contraction of the cluster *st-* (མེ) to the horizontal ligature མེ, of (མེ) *spy-* to མེ, and of *rts-* (མེ) to མེ in the handwriting whenever these combinations appears.

• *B* – The Berlin Manuscript Kanjur

The manuscript Kanjur kept in the Staatsbibliothek in Berlin dates from 1680.³ It is said to be a copy from a lithograph of the Yongle 永樂 (1410) or Wanli 万曆 edition (1606), and thus predates the widely used “Otani reprint,” which is a photolithographical reprint of the Kangxi 康熙 edition of 1717–20.⁴

The manuscript is beautifully written in *dbu can* and is in excellent condition. Each folio has eight lines. From the middle of the fifth line on folio 327b till the folio end the script is larger, and instead of *rkyang shad* the obviously different (and seemingly inexperienced) copyist repeatedly used the *nyis shad*.

As has also been confirmed by other scholars, the number of mistakes is fairly high. We find

- frequent omissions,
- *aberrationes oculi*,
- confusion concerning vowels,
- orthographic confusion between *-ng-* and *-d-* (though *-ng-* and *-d-* are clearly distinguishable in the script), and
- a large number of obvious misreadings of letters (e.g. *'jig* for *'jim*, *nyid* for *nyil*, *stod* for *ston*, *thams* for *thabs*, *dam* for *dri ma*, *mdod* for *mdog*, *'dun* for *'dren*, *dpan* for *dper*, *'bum* for *dbul*, *shes* for *shing* etc.).

The last two categories in particular suggest that the text was not read aloud when written down by the copyist but just copied letter by letter, thus allowing for many senseless variants.

There are just a few instances of later corrections to the writing. At the end of a line we frequently find words with subscribed letters. The *tsheg* is never set before *shad*. The gap between the two *shads* of a *nyis shad* and between *rkyang shad* and the following word is of about one letter.

in 11A and 11I but *bskal ba* in 11G (see also Harrison 1992a: xxi, where for the *DKP* the forms *snyan* and *snyand* are confirmed). For paleographic, orthographic and phonetic peculiarities in the Tabo manuscripts see also Steinkellner 1994: 124f., de Rossi Filibeck 1994: 139, Tauscher 1994: 175ff., Eimer 1989/91, Scherrer-Schaub 1999b, and the contributions in Scherrer-Schaub and Steinkellner 1999; for other materials with archaic features see Taube 1980 with an extensive bibliography.

³ See Haarh 1954: 540.

⁴ Imaeda (1977: 27, n. 18) states that it is more likely that the Berlin manuscript is based on a Wanli lithograph than on a lithograph of the Yongle edition. He does not provide us with any reason for his assertion. Eimer mentions both possibilities (2000: 36, n. 24).

• *Bth* – The Newark Manuscript Kanjur from Bathang⁵

Bth is the only known representative of a separate, paracanonical translation of the *TGS*. Judging from its terminology and syntax, it must have been executed before translations became more standardized following the compilation of compendiums like the *MVy* and the *sGra sbyor bam po gnyis pa*, that is, before the early ninth century. The assumption of the sixteenth century as the one in which *Bth* was copied is based on art-historical considerations⁶ and does not conflict with the orthographical facts, given that the employed orthography exhibits very few archaic characteristics (*ci* for *ji*, *stsogs*, in some rare cases the use of the *mtha' rten 'a* (*dpe'* for *dpe*), *'og du, yan cad*).

The folios were probably kept together by two strings up the middle of the left and right halves of the book resulting in black stripes extending from the top to the bottom on the photos of the folios, and rendering the affected letters unreadable. With the exception of two eight-lined pages (one recto and one verso), both sides of all folios contain nine lines. The handwriting (*dbu can*) is sloppy and irregular and has some lacunas. These lacunas were partly caused by the erasure of letters. In most cases, however, they are found where the bottom parts of letters from the line above consume much space, so that leaving the position in the line below empty made for greater legibility.⁷

A *tsheg* before *shad* is found in several cases. The gap after *shad* and “colon” (see below) is irregular but tends to correspond to the width of one or two letters. Between or after the *nyis shad*, however, there is almost no gap. The text is rich in contractions:⁸

skyabs(s)u, skyes(s)o, khams(s)u, grangs(s)u, 'gyur(r)o, chags(s)u, rjes(s)u, btags(s)o, stag(g)o, bdag(g)is, 'das(s)u, nam(m)kha', gnas(s)o, rnams(s)u, phyogs(s)u, dbus(s)u, tshigs(s)u, rdzogs(s)o, bzhugs(s)o, yongs(s)u, lags(s)o, shun(n)i, bshad(d)o, gsungs(s)o.

The use of the *anusvāra*-like abbreviation for *-m-* is extremely common, and subscripts also appear. Well-established terms are usually written without a separating *tsheg* between the syllables: *skyes-bu, kha-tog, kha-lo, khrig-khrag, ngo-bo, ngo-mtshar, gti-mug, sti-stang, tha-dad, the-tsom, rdo-rje, rnam-par, pha-rol, phyi-rol, phra-mo, phrag-stong, byang-chub, blo-gros, ma-rig, me-tog, rdzu-'phrul, zhe-sdang, 'od-zer, yang-dag, ye-shes, re-re, sems-dpa'*.⁹

Abbreviations are found, such as *thad* (for *thams cad*), *sbra-rtsi* (for *sbrang rtsi*), *gshyes* (for *gshegs*), *saryas* (sic!; for *sangs rgyas*) and *sem'dpa'* (for *sems dpa'*). The text contains repetitions and omissions of passages, partly corrected later by adding the missing words beneath or above the line.

⁵ I have elsewhere described the characteristics of the *TGS* manuscript from this Kanjur in detail (Zimmermann 1998); see especially pp. 38–42.

⁶ Olson 1971: 114.

⁷ In some cases a lacuna is found in the line below words first omitted by the scribe and later added between the lines. This documents that the newly completed line was at least partially checked before starting with the next line.

⁸ Only those contractions are cited for which obvious reasons, such as shortage of space at the end of the line, cannot be found. The letter supplied in brackets is omitted in the contraction.

⁹ Some less well-established combinations also appear: *bsten-te, byas-te* (with superscribed *s-*), *mi-za* and *mig-gis*. The dash between the syllables merely serves to make the words more readable. The manuscript has e.g. མིག་གིས་ (*mig-gis*).

Misspellings are not very common but clearly exceed the number found in *Q* or *S*. It is to be noted that the adding or omitting of final *-s* in the use of the particle *kyi(s)* seems unreflected. Other irregularities are:

- the use of the particles *kyi* and *kyis* after final *-n*, *-m*, *-r* and *-l* (the proportion of the particle *kyi(s)* (against the regular *gyi(s)*) after the finals: *-n* 83% (against *gyi(s)* with 17%) ; *-m* 71%; *-r* 62%; *-l* 77%),
- confusion between final *-l* and *-s* or *-r*: *byol* for *byos*; *dbus* for *dbul*; *rus* for *rut*; *rgyal* for *rgyar*; *gsel* for *gser*,
- confusion between *pa* and *ba*,
- omitting/adding of subscribed *r*: *skod* for *skrod*; *bskad* for *bskrad*; *phrag* for *pags*; *smrad* for *smad*,
- various spellings for the same word: *khung* and *phung*; *grags* and *drags* (for *grangs*); *dkiil mo grung* and *dkiil mo drung* (for *skiyil mo krung*); *ci tse* and *ci rtse*; *the tsom* and *the rtsom*; *sman*, *smod*, *smon* and *smrad* (for *smad*); *ril* and *rul*, and finally
- variant spellings possibly caused by same or similar pronunciation: *rgya rgod* for *bya rgod*; *rgyun po* for *rkun po*; *bsgrub* for *sbubs*; *ngam* for *ngan*; *gtong* for *mthong*; *blten* for *bstan*; *spyod* for *bskyod*; *'phags* for *pags*; *dbus* for *dus*; *shin* for *shing*.

Very common throughout the text is the employment of two vertically aligned dots resembling a colon where in other Kanjurs a *shad* is used. The *rkyang shad* appears only twelve times throughout the whole text. The *nyis shad*, too, appears less often than in other Kanjurs.¹⁰

Instead of *pa'i* at the end of the line we sometimes find *pa* with an *'a chung* beneath. Above the *pa* there is a mark resembling a parallel double *'greng bu*. The same feature is attested for Dunhuang materials (see Schoening 1995b: 737).

• **Bu – The Citation in Bu ston Rin chen grub's *De bzhin gshegs pa'i snying po gsal zhing mdzes par byed pa'i rgyan***

Two short parts of the Tibetan Canonical translation of the *TGS* are quoted in the *De bzhin gshegs pa'i snying po gsal zhing mdzes par byed pa'i rgyan*, a work by the famous Tibetan scholar Bu ston Rin chen grub (1290–1364) finished in 1359.¹¹ The text I utilized is the reproduction of a lithograph from blocks prepared in the years 1917–19 in Lhasa. The writing is in *dbu can*; the lithograph is in excellent physical condition and has seven lines per folio.

• **D – The Derge Kanjur (Nyingma Edition)**

The Nyingma reprint dates from the beginning of the 1980s. It is said to be a reproduction of the so-called Karmapa edition.¹² In the case of the *TGS*, the

¹⁰ The statistics testify the usage of the “colon” for 84% of all punctuation marks, the simple *shad* for only one percent, and the *nyis shad* for about 15%. The usage of the *nyis shad* is low compared with its 39% rate in the *TGS* of the London Kanjur. The simple *shad* in *Bth* is in every second case preceded by *na* or *nas*.

¹¹ See Seyfort Ruegg 1973: 1.

¹² See Skilling 1994: xxxviii and Silk 1994: 63.

reprinted folios are identical to the folios of the Taipei edition,¹³ with the only differences being that in the Taipei edition the Tibetan pagination at the left border of the folio is not framed and that at the right border of the folio no additional frame (in the Nyingma reprint containing a number added by the editors) is found. In general, the Taipei edition is more legible than *D*'s weak print. It has been pointed out by Silk (1994: 63f.) and Skilling (1994: xxxviii) that the Nyingma edition cannot be called a pure reproduction of the Karmapa edition, inasmuch as it has been retouched in several passages and damaged leaves have been replaced with the aid of photographs made from the Derge edition owned by Harvard University (Harvard-Yenching Library) and by the United States Library of Congress in Washington, D.C.

The Karmapa edition (1976–79) itself is a reproduction of the Derge Kanjur deposited in Rumtek (Sikkim) which, according to Eimer (1980), differs from the copies held in the University Library in Cambridge and in the Academy of Sciences of the Czech Republic in Prague only in terms of its superior graphical quality but not in its wording. The Derge Kanjur dates back to 1733 (Imaeda 1981: 229).

D is very readable with seven lines per folio. It has an extremely low number of single variants and no abbreviations or subscripts. The syllables *pa* and *ba* are hard to differentiate. Within the *nyis shad* and between a *shad* and the following syllable there is a gap of about two letters. A *tsheg* is placed before *shad* only after final *-ng*.

• *J* – The 'Jang sa tham or Lithang Kanjur

The date of the carving of this Kanjur has not been established with certainty. Imaeda (1982b: 12; 14), based on the Chinese colophon, suggests the period from 1608 to 1621 as the time of its production, while Samten (1987: 17f.) argues in favor of the years 1609 till 1614.

The quality of the microfilm I obtained is very poor. The letters are sometimes hardly recognizable against the dark background; in other cases both background and letters are too light. In general, the letters are not very clear, *pa* and *ba* along with *nga* and *da* being for the most part not differentiable. In many cases it is also impossible to decide where the *tsheg* is placed, and hence where the syllables should be split.

The folios have eight lines. The gap within the *nyis shad* or between a *rkyang shad* and the following syllable is two to three letters. A *tsheg* before a *shad* is extremely exceptional. The Lithang *TGS* is very carefully carved and contains just a few mistakes, mostly the omission of vowel marks. Gaps are frequent; the reversed *gi gu* appears twice throughout the text. A particularity of *J* is the use of the particle *du* instead of *tu* after final *-n*. In 90% of all appearances of *kun tu J* reads *kun du*, in 93% of all cases *J* has *shin du* for *shin tu*. The form *rol du*, too, appears.

The Cone Kanjur from 1721–1731 is based on this Lithang Kanjur despite some differences in the order of the sections. Eimer therefore calls the Cone print “a true copy of the Lithang Kanjur” (1992: 181). I can confirm his

¹³ In *The Tibetan Tripitaka, Taipei Edition*, ed. A. W. Barber, SMC Publishing: Taipei, 1991, vol. 14, no. 258, *mDo sde, Za 245a2–259b4*.

statement based on a comparison of some parts of the *TGS* in the Cone Kanjur with *J*.¹⁴ However, most of the mistakes¹⁵ in *J* have been emended by the carvers of Cone, the lacunas in *J* are of course not longer found in Cone, and the reversed *gi gus* have been standardized. We still find *kun du*, *shin du* and *rol du*, with some exceptions of *tu* where *J* mostly also reads *tu* (in some cases Cone has *du* where *J* reads *tu*!). Of particular interest is the variant *dkrung* in *J* against the usual *krung*, which appears altogether six times. In all these cases Cone reads *krung* with a lacuna of one letter before *krung*, resulting most probably from a first copied but later erased *d*- (still found in *J*). In the only case where *J* also has *krung*, no lacuna is found in Cone. We face a similar situation in 5A, endnote e, where only *J* reads *dbyigs* instead of *dbyig*. In Cone we find *dbyig* followed by a lacuna of one letter.

• *L* – The Shel dkar Manuscript Kanjur (London)

The London copy of the Shel dkar manuscript Kanjur was completed in the year 1712.¹⁶ The script is of excellent legibility with eight lines per folio.¹⁷ There is a string hole in the center of the left and right halves, each with a diameter of about three letters. A *tsheg* appears before a *shad* only after a final *-ng*; there is virtually no gap after a *shad* or within a *nyis shad*.

Of the collated materials, *L* contains the highest number of contractions (*yongs(s)u*, etc.); frequent, too, are subscripts and abbreviations, which occur for the most part at the end of a line and before string holes, but are not restricted to these positions: *bcom*, *tham̄d* for *thams cad*, *rnam̄r* for *rnam par*, *tshoṭ* for *tshogs*, *bzhuṭ* for *bzhugs*, *g.yoṭ* for *g.yogs*, *longspyod* (ལོང་སྤྱོད་), *gshye* for *gshegs*, *sem̄n* for *sems can*. Besides these particularities, there are single variants, restricted to a number of omissions of mostly single syllables and, in one case, a dittography consisting of several words. Lacunas resulting from later erasures of letters appear sporadically.

• *N* – The Narthang Kanjur

According to Tucci and Petech,¹⁸ the blocks of this Kanjur were carved from 1730 to 1732. The photocopies I utilized are of poor quality. The letters in some

¹⁴ My thanks are due Professor K. Mimaki (University of Kyoto) who provided me with the relevant photocopies of the *TGS* in the Cone print—which he acquired from the Tōyō Bunko in Tokyo: *mDo mang*, *Za* 274a8–289a4.

¹⁵ In OE *J* omits *'i gnas* as part of the name of the bodhisattva *Mi g.yo ba'i gnas rnam par gnon* (**Acalapadavikrāmin*). In *C*, however, the name appears as *Mi g.yo ba gnas rnam par gnon* (275a4). I am not sure what conclusion should be drawn from this fact, considering the likely source for the emendation in *C*. Skilling (1994: xxxvi) states that in the case of *Mahāsūtra* 3 the editors of *C* consulted an edition belonging to the Peking lineage. In our case, however, *B* and *Q* read *ba'i gnas* and not *ba gnas*.

¹⁶ On the date see Pagel and Gaffney 1996: x, and the article by Jampa Samten and Peter Skilling contained in Pagel and Gaffney 1996 (pp. 1–11).

¹⁷ All three colophons of the Kanjur state that the calligraphers came from “sNye mo, birthplace of Thon mi Sambho ṭa, a place in Central Tibet renowned for its tradition in calligraphy” (Samten and Skilling (p. 9) in Pagel and Gaffney 1996).

¹⁸ The statements by Tucci 1949: 479f. and Petech 1972: 160f. are based on the *dkar chag* of the Kanjur.

passages look like meaningless black spots. In general the appearance of the script is blurred. The difference between *pa* and *ba* is sometimes impossible to make out. Similarly difficult in many instances where the *tsheg* is hardly recognizable is how to determine syllables. The folios have only seven lines. A *tsheg* before a *shad* is only found after syllables ending in *-ng*; the gap within a *nyis shad* or between a *rkyang shad* and the following syllable is normally about one letter.

One particularity of *N* is the contraction of *yang* to *'ang* following a syllable ending in a vowel (e.g. *bu'ang*). This feature is found throughout the whole text. There are not many misspellings; most of them are due to a missing *'greng bu* or *na ro* or to confusion between these vowels. Abbreviations by means of subscripts are rare. Abbreviations in general are found at the end of a line. Interesting among them are *gsheṭ pī yais* for *gshegs pa'i ye shes* and *yton* for *yon tan*.¹⁹

• *P*₁, *P*₂, *P*₃ – The Phug brag Manuscript Kanjur

This manuscript Kanjur was copied between 1696 and 1706 at the Phug brag monastery in Western Tibet.²⁰ The *TGS* is not the only text which is contained several times in the Phug brag Kanjur (other texts appear even in different translations). The three manuscripts of the *TGS* found in the Phug brag Kanjur share many features. They all have eight lines per folio²¹ and are written in a clear *dbu can* hand. This and the fact that the gap within a *nyis shad* or a *rkyang shad* and the following syllable is of about two letters (in *P*₃ closer to three letters) render the manuscripts easy to read. The script in *P*₃ is bigger than in the two other versions, and there is more space between its letters. Unfortunately, some parts of *P*₁ were overexposed when photographed and are too faint to be made out.

The pagination written in the left margin of the leaves of *P*₁₂₃ is interesting: instead of *nyis brgya* the margin has just two crosses (in *P*₁ it has three crosses). *P*₂ further bears the word *mngon* at the top of the left margin.

The *tsheg* before *shad* appears regularly after syllables ending in *-ng*. *P*₂ is particular in the way it handles the *nyis shad* between the verse pādas: all other manuscripts and prints strictly use the *nyis shad* to separate the pādas, but *P*₂ prefers the *rkyang shad*, employing the *nyis shad* regularly only when the pāda has a sentence-closing particle (... *go* etc.) at its end (in one case even after ... *nas*).

The manuscripts of the *TGS* in the Phug brag Kanjur can be said along with *B* and *T* to contain the highest number of mistakes. Among the three versions, *P*₃ is the one with the most single variants (427), followed by *P*₂ (329) and *P*₁ (239). Frequent errors include the omission of single words or whole phrases and the adding or dropping of final *-s* in syllables like *kyi(s)*, *stag(s)*, *byam(s)* and *bzang(s)*.

¹⁹ The abbreviations *yais* for *ye shes* and *yton* for *yon tan* (ལྷོ་ཏན་) are quoted in Bacot 1912: 600 and 604.

²⁰ Eimer 1993: v.

²¹ Only the folio (verso) where the sūtra starts and the following recto of *P*₃ have seven lines.

*P*₃ adds the *mtha' rten 'a* in five cases: *'dra'* (4 times), *g.yo'*. Another archaic element is the reading *stsogs* for *sogs* in *P*₁₂ (four times each). Some further peculiarities of spelling in *P*₃: the inconsistent use of *'a sngon 'jug* where the majority of versions have *m-* (*'gar, 'thil, 'thon, 'dab, 'dun*), the omission of prefixed *g-* and *b-* (*(b)skyod, (g)ci, (g)cig, (b)snyen, (b)stan, (b)rlabs, (b)shig, (b)sgrubs*), and *du* instead of *tu* after *kun* and syllables ending in *-g*.

Furthermore, *P*₃ clearly shows a number of redactional variants (see below) and, in comparison with *P*₁₂, is more orthographically standardized, as the section on archaic features documents.

• *Q* – The Peking Kanjur (Otani Reprint)

The Otani reprint is a photolithographical reproduction of the third Kangxi 康熙 edition from 1717–1720. As is well known, missing parts have been supplied from the Qianlong 乾隆 edition of 1737, which derives from the same blocks. One lithograph of this Qianlong edition is kept in the Bibliothèque Nationale in Paris.²²

Q has eight lines per folio with some passages of rather unclear appearance. *Pa* and *ba* along with *da* and *nga* are not always differentiable. The print shows a number of lacunas, most not longer than one or two letters. A *tsheg* appears regularly before a *shad* after final *-ng* and occasionally even after other letters. The gap within a *nyis shad* or between a *shad* and the following syllable is of about one letter.

Q is written quite carefully without hardly any omissions. Most mistakes occurred owing to confusion between vowels, *nga* and *da*, and *ba* and *pa*, and finally from a wrong segmentation of groups of letters (e.g. *dag 'bar* for *dga' bar, rnam sa* for *rnams, rdza pa* for *rdzab, so so* for *sas*).

• *S* – The Stog Palace Manuscript Kanjur

The manuscript used is an offset reprint of the handwritten *dbu can* Kanjur preserved in the Royal Palace in Stog. The Kanjur itself was copied from a Bhutanese original “some time during the first half of the 18th century.”²³ The manuscript was reprinted between 1975 and 1980 in Leh (Ladakh).²⁴

S is a very carefully and clearly written manuscript, with the lowest number of single variants among the collated materials. It has seven lines per folio; the gap within a *nyis shad* is of one to two letters, while the gap before and after a *rkyang shad* is usually of one letter each. A *tsheg* is found before a *shad* only after *-ng*.

It seems that *S* follows a very unique punctuation system, omitting the *rkyang shad* in many passages where it is found in all other versions. The manuscript has a number of abbreviating subscripts.

²² Imaeda 1977: 32.

²³ Skorupski 1985: xii.

²⁴ Skorupski 1985: xiii.

• *T* – The Tokyo Manuscript Kanjur

The Tokyo manuscript Kanjur was brought to Japan from Gyantse. It is said to have been copied between 1858 and 1878.²⁵ The photocopies I obtained are rather difficult—in some passages impossible—to read, since usually features show through from the other side of each folio. It is hard to differentiate *pa* and *ba*, and the position of the *tsheg* is in many cases unclear.

The folios have eight lines each and are written in *dbu can*. A *tsheg* before *shad* is rare and does not seem to be limited to syllables ending in a certain letter. As a rule there is no gap within a *nyis shad* or between a *rkyang shad* and the following word. In many instances, however, gaps are found, especially when the copyist did not make use of the remaining space before the end of a line. In such cases the second *shad* of the *nyis shad* is positioned at the end of the line, so that the gap can extend to as many as ten letters. Gaps which bear no traces of erasure of syllables are not mentioned in the present critical apparatuses.

T contains a very high number of single variants. Among them are frequent omissions of single syllables, very often *rkyang shad* where all other versions have *nyis shad* (sometimes also vice versa), a host of wrong spellings (e.g. *cad* for *can*, *'jol* for *'jog la*, *snyas* for *snyam*, *bstas* for *bltas*, *dpen* for *dper*, *btsegs* for *brtsegs*, *yeng* for *yang* etc.), corrections which have been inserted later, or lacunas resulting from deleted syllables, words or whole passages. In all, it is obvious that the copyist did not work very accurately.

2 The Stemmatic Relations among the Representatives of *Tib*

In the following I shall discuss the relations among the versions of *Tib* collated in my edition. The basis for my considerations will be the variants shown by the different manuscripts and prints. To be sure, drawing conclusions from variants is a complex undertaking, and I shall begin with some comments on the nature of the variants and their meaning for the establishment of a Kanjur stemma.

First of all, we need to keep in mind that there are two main kinds of variants, namely ones which Harrison (1992a: xxv) has called “recensional” and “transmissional” variants. Recensional variants “reveal either extensive and deliberate editorial changes to the text, or the adoption of a different text altogether, rather than errors resulting from scribal lapses or casual attempts to improve or modernise the text (which are indeed usually deliberate, but generally rather trivial in scope).”²⁶ As for the *TGS*, we hardly find any variants of this type except for some few examples in the Tabo fragments. The absolute majority of variants in the *TGS* are of the second type, namely of a transmissional character. It is clear that if two manuscripts bear some identical *redactional* feature, they likely derive from a common ancestor, may have influenced each other, or else been influenced by a third manuscript which has the reading in question, but in cases of transmissional variants the situation is more complex.

²⁵ See Saitō 1977: 6 (401). His assessment is based on the years mentioned on the first page of the volumes devoted to different prayer texts.

²⁶ See Harrison 1992a: xxv.

The decisive criterion for the evaluation of a transmissional variant is less the question if it was introduced deliberately or not, and more its degree of probability. That is to say, even if we have to deal with a trivial difference in the spelling of a word, such as *sngan cad* for what is commonly spelled *sngan chad*, the nature of the variant is rather indicative. This spelling is very rare in non-archaic manuscripts, and its occurrence in the same position of the text in two manuscripts can hardly be a coincidence (e.g. 0K, n. 9). Similarly indicative are omissions, additions or changes of parts of the text which cannot be explained as caused by deliberate intervention on the part of an editor or scribe who intended to emend an “obviously faulty” text. At best, such readings can, in the light of other translations, clearly be shown to be mistakes.

The direct textual surroundings in which the passage is embedded may have caused variant readings, as in the case of *aberrationes oculi*, where the scribe intends to continue to write from the word he stopped at but, owing to the multiple occurrence of the same word, jumps to the wrong position in the text. Such peculiarities, if found in two manuscripts, will naturally be less indicative in terms of their stemmatic relation. Generally speaking, the stronger text-internal reasons there are which could have led to the occurrence of the same transmissional variant in more than one manuscript, the less valuable the variant becomes for proving any stemmatic relation between the manuscripts. As the main principle in my analysis, each variant shared by several manuscripts underwent a thorough check in order to assess its probability. Only if the probability of its independently occurring was low could it be used as a variant indicative of stemmatic relations.²⁷

Also, the punctuation of the manuscripts and prints plays an insignificant role in my analysis. Whereas the punctuation clearly confirms the close relation within the three groups *BDJNQ*, *LST* and *P₁₂₃* separately, it allows no conclusion regarding the relations of the groups to each other in terms of the degree of originality exhibited by the transmitted texts.

2.1 The Three Phug brag Versions

As mentioned above, three versions of the *TGS* are contained in the Phug brag manuscript Kanjur. The fact that the three versions do not, as one would expect, appear one after the other but instead in different volumes, may mean that they were not separated from the group of texts in which they were most likely transmitted or stored from earlier times. It may well be that such groups were brought together, or copied and then brought together, from different regions in order to collect them for a larger project.

What, then, is the stemmatic relation between *P₁*, *P₂* and *P₃*? First of all, it is clear that the three versions share a sufficient number of variants to prove that they derive from a common ancestor (*P₀*). Just a few characteristic variants shared exclusively by *P₁₂₃* may be enough to illustrate this fact:

- (1) – 0E, n. 20 *P₁₃*: *gzugs*, *P₂*: *gzug* for *gzungs*.
- 0K, n. 15 *P₁₂₃*: *tshogs* for *chos*.
- 0M, n. 25 *P₁₂₃*: om. *nyid*.
- 2A, n. 13 *P₁₂₃*: om. *sbrang rtsi des (aberratio oculi)*.
- 2C, n. 8 *P₁₂₃*: *skyod* for *skrod*.

²⁷ I have virtually neglected variants such as *kyis* for *kyi*, *pa* for *ba* and *ba 'am* for *ba'am*.

- 2C, n. 22 P₁₂₃: *spos* for *spobs*.
- 4A, n. 3 P₁₂₃: *'am* for *dang*.
- 6A, n. 9 P₁₂₃: om. *de bzhin du*.
- 6B, n. 17 P₁₂₃: om. *zhes*.
- 7A, n. 41 P₁₂₃: om. *bu'i thum*.
- 9A, n. 22, 23 P₁₂₃: om. *gang dang*.
- 9C, n. 12 P₁₂₃: om. *shin tu*.
- 10C, n. 26 P₁₂: *ba dang / dge ba mngon par 'du bya ba snga*; P₃: *ba dang / dge (ga) bas mngon par 'du bya ba snga* [*ga* marked with three dots in the form of a triangle for deletion]; (P₁₂₃: *aberratio oculi*).
- 11C, n. 13 P₁₂₃: om. *reg pa*.
- 11I, n. 16 P₁₂₃: *ba* for *dbang*.

Each of these three versions, however, has essential variants²⁸ of its own, not shared by any of the remaining two versions, which leads to the conclusion that none of the three could have served as the master copy for any of the other manuscripts. Such essential variants include:²⁹

- In P₁: (2)
- 0B^a P₁: om. / *dbang*.
 - 0H^b P₁: om. *gi mdab ma de dag (aberratio oculi)*.
 - 0H^h P₁: *'bar 'ong ba* for *par 'os pa*.
 - 4A^j P₁: om. *gser gyi*.
 - 5Bⁱ P₁: *dga'* for *rko*.
 - 10B^{ww} P₁: om. *de la / bsod nams mngon par 'du byed pa*.
- In P₂: (3)
- 0E^o P₂: om. *spos dga'i dpal dang /*.
 - 0E^{u,v} P₂: om. *dbyu gu* here and inserts it some words later.
 - 0H^a P₂: *sku pad ma'i* for *de dag gi mdab ma*.
 - 1B^f P₂: om. *ma byung yang rung (aberratio oculi)*.
 - 9Cⁱⁱ P₂: inserts *de ltar*.
 - 11C^p P₂: om. *dran pa dang ldan pa dang / (aberratio oculi)*.
 - 11H^{uu} P₂: om. *rdo rje'i blo gros khyod nyid de bzhi'o // (aberratio oculi)*.
- In P₃: (4)
- 0B^{aa} P₃: om. *shes rab shin tu rnam par grol ba /*.
 - 0D^p P₃: *sngon bdag* for *gang dag*.
 - 0E^{gg} P₃: om. *sa 'dzin dang /* (name of one of the bodhisattvas).
 - 0L^v P₃: om. *ltar nyan pa dang / bcom ldan 'das kyis 'di skad ces*.
 - 1C^f P₃: *phye* for *gyes*.
 - 2A^w P₃: *rig par mthong ngo* for *mthong bas rig go*.
 - 4C^h P₃: *nyi shu pa* for *mi nyung ba*.
 - 5B^{qq} P₃: ins. *mig shig du yongs su dag pas sems can thams cad de lta bur mthong nas / de bzhin gshegs pa'i (aberratio oculi)*.
 - 6A^h P₃: om. *'dzam bu'i 'bras bu 'am / ta la'i 'bras bu 'am (aberratio oculi)*.
 - 11E^p P₃: *jig* for *mchod*.

Knowing that all three versions derive independently from a common ancestor, we should further inquire whether there are essential variants shared by two of the manuscripts. If this is the case, we would be obliged to assume that there was another step in the copying between P₀ and P₁₂₃, shared by two of the manuscripts. Regarding this analysis, the facts are very clear:

There are virtually no essential variants common to P₁ and P₃. The few readings worth mentioning are:

²⁸ By “essential variants,” I mean variants which consist of more than just a different way of spelling or an erroneous omission or change of a single letter within a word.

²⁹ Theoretically, it is, of course, possible that one of the manuscripts was checked with the help of P₀ while being copied from one of the other two manuscripts, so that major mistakes found in the master copy could be corrected. While we can never be sure how exactly the copy of any given text came into existence, in our case the evidence supplied by the variants is so overwhelming that there is no need to assume a more complicated situation, at least as long as the appearance or non-appearance of variants in the different manuscripts can be explained satisfactorily.

- (5)
- 9C, n. 5: P₁₃: *g.yog* for *gsog*.
 - 10C, n. 30: P₁₃: om. *grangs dang /*; P₂: *grangs dang /* in small letters above the line (the position in the text where *grangs dang /* is to be inserted is marked with a cross).³⁰
 - 11H, n. 20: P₁₃: om. *de*.

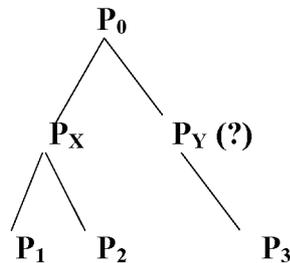

The situation is similar in the case of P₂ and P₃:

- (6)
- 0G, n. 11: P₂₃: om. *bye ba*.³¹
 - 0I, n. 4: P₂₃: *ni* for *gi*.
 - 7A, n. 7: P₂₃: om. *des*.
 - 11I (verse), n. 23–25 P₁: *de 'i tshe de dag mdo 'di thos //*,
P₂: *de 'i tshe de dag mdo 'di thos gyur nas /*,
P₃: *de tshe de dag mdo 'di thos gyur nas //*
for *de tshe de dag gis ni mdo 'di thos //* (*gyur nas* in P₂₃ was probably the reading of P₀ and omitted by P₁)

The common readings of P₁ and P₂, on the other hand, do not need any further comment:

- (7)
- 0C, n. 4 and n. 7: P₁₂: insert *chen po*.
 - 0E, n. 4: P₁₂: *blo gros* for *zla 'od*.
 - 0J, n. 19: P₁₂: *dga'* for *gda'* (metathesis).
 - 0K, n. 28: P₁₂: om. complete pāda 0.4b.
 - 1A, n. 35: P₁₂: insert *rnams ni yang dag pa* (dittography).
 - 2B, n. 5: P₁₂: om. *gti mug dang /*.
 - 7A, n. 36: P₁₂: insert *dngos por yang ston pa dang* / 'brog na gnas pa 'i* [*P₂: *da nga* for *dang*] (*aberratio oculi*).
 - 10C, n. 10: P₁₂: om. *dge slong ngam / dge slong*.
 - 12B, n.18: P₁₂: om. *lha dang / mi dang*.

It is now clear that we must assume that P₁ and P₂ have a common ancestor P_X, from which the essential variants found in P₁₂ but not in P₃ derive. The stemmatic relation between P₁₂₃ should then be:

One more word concerning the single variants of P₃: while it is clear that the bulk of variants found in P₃ result from a scribe copying the master copy without careful attention and sticking to his own particular spellings (see above), it is equally evident that several passages contain redactional variants, that is, that certain passages or words have been altered consciously by the scribe or had already been altered in a hypothetical copy P_Y between P₀ and P₃. These alterations reflect the attempt on the part of the redactor to “emend” or to “make sense of” passages which were hardly understandable for a Tibetan reader but

³⁰ The words are part of a well-known enumeration of merit resulting from the propagation of a sūtra. This list appears twice in the *TGS*. Obviously P₂ at first had the same omission, probably a mistake of P₀, but it was later emended. Thus this variant is useless for trying to establish a close relation between P₁ and P₃.

³¹ The text in this passage reads ... *kha ma bye ba bye ba khrag khrig*.... A shared variant like this cannot be used to prove a close relation between two manuscripts. The text seems to contain a dittography, and the copyists could independently have thought it necessary to “emend” it.

which could be rendered so by the use of stylistically more common terms. The variants in question are:

- (8) – 0E^{ij} P₃: *mi skyo ba* for *yid skyo*: The name Yid skyo (*Khinmanas) in the enumeration of the participating bodhisattvas (no. 40) seems in fact not very adequate as the name for a bodhisattva. Thus the editor of P₃ changed it to *mi skyo*; the syllable *ba* is found in all three versions P₁₂₃. The name *mi skyo ba* in P₃ means “Unweary.”³²
- 0H^d P₃: om. *mog*: The text in this passage runs ... *mdab ma de dag thams cad mog mog^d po dang / nog nog po dang*.... It is thus clear that the double *mog mog* is parallel to the following *nog nog* and here is no dittography. Most probably the redactor of P₃ tried to “emend” the second *mog* by taking it as dittographic.
- 0L^v P₃: om. the passage from “v→” till “←v.” The text runs: *bcom ldan 'das kyi^v ltar nyan pa dang / bcom ldan 'das kyi^s 'di skad ces^v bka' stsal to //*. This is part of the common introductory formula in many sūtras (see n. 49 in the translation). Though *bcom ldan 'das kyi ltar nyan pa* is a standard expression in the Tibetan (for Skt. ... *bhagavataḥ pratyasrausīt* /), the genitive ... *kyi* seems impossible to construe. The redactor of P₃ therefore dropped the part between the genitive and the following *bka'* so that the genitive can be constructed with *bka'*.
- 2A^w P₃: *rig par mthong ngo* for *mthong bas rig go*. The text runs ... *de bzhin gshegs pa'i ye shes mthong bas rig go^w //*: “[I] realize with the Tathāgata’s mental vision that....” The term *de bzhin gshegs pa'i ye shes mthong ba*, Skt. *tathāgatājñānadarśana*, was obviously unknown to the editor of P₃, which led him to change the sequence of the words. He thus probably understood: “Realizing the Tathāgata-knowledge [I] see that....”
- 2B^a P₃: *yang skyes bu thabs*. The text here reads ... *de bzhin gshegs pa yang^a thabs la mkhas pas bung ba bsal ba de bzhin du*....: “... just like the [person who] removed the bees, also the Tathāgata, with skill in [the application of appropriate] means (*upāyakuśala*)....” I have supplied the subject of comparison in brackets (“person who”), just as the editor of P₃ felt it necessary to mention it.
- 4C^h P₃: *lo ni nyi shu pa* for *lo ni mi nyung ba*. The context is the nugget of gold remaining in the filth “for not [just] a few years”. The redactor of P₃ has changed the text to “twenty years”.
- 6A^l P₃: *shing shun* for *phyi shun*. It is in fact puzzling why the text here speaks of a seed within the “outer” peels. In an attempt to make sense out of the text, P₃ was altered to “the peels of a tree,” given that the larger context is the essential identity of seed and tree. (The seed, however, is of course not within the peels of the tree, that is the bark, but within the fruit.)
- 8B^{ij} P₃: *dgon pa'i khang pa* for *mgon med pa'i khang pa*. The poorhouse in the text becomes in P₃ a “house [in the] wilderness.” As the house is compared to the places of rebirth, the variant of P₃ works well, even though the poor woman lodges in a poorhouse in 8A (also in P₃).

The variants neither of P₁, P₂ nor P₃ suggest an affinity with any of the other collated versions which is stronger than what is “natural” when dozens of variants are compared.³³

As a result of this analysis, we can now assume that the reading of the archetype of the TGS in the Phug brag lineage (P₀) can normally (but not automatically, as has been shown above) be posited if either P₁ or P₂ sides with P₃. If, however, P₁ and P₂ stand against P₃, no such conclusion as to the original reading of P₀ is possible since P₁ and P₂ derive from the same master copy P_X.

³² Skt. *Khinmanas (“[The One with] a Grieved Mind”) as a name for a bodhisattva is probably meant to convey the sense that the bodhisattva is worried about the suffering of all living beings.

³³ P₃ usually shares the reading *cig* instead of *gcig* with B_{NQ}, *'a sngon 'jug* instead of *m-* with B_{JNQ}S, and in some instances the omission of a prefixed *b-* with B_{JNQ}. This can, of course, be interpreted as no more than a similar mannerism in certain spellings, and certainly not as a genetic relation.

In the following I will deal with the position of P_0 in relation to the other Kanjur lineages. A statistical analysis reveals that the Kanjurs of the Tshal pa lineage do not use the *rkyang shad* in 110 cases where L , on which the punctuation of the critical edition is based, has it. P_0 lacks the *rkyang shad* in sixty cases where L has it and adds *rkyang shad* in thirty positions where it is not found in any of the other Kanjurs. Fifty of the sixty positions where P_0 lacks the *rkyang shad* are identical with the position among the 110 cases where the Tshal pa tradition does not add a *rkyang shad*.

Based on punctuation alone, the result thus confirms the preceding studies in Harrison 1992a, Schoening 1995, Silk 1994, and Skilling 1994, which characterized the Phug brag manuscripts as an independent tradition in the sense described above. We should further inquire about the nature of the variants found only in P_{123} : can they all be characterized as transmissional variants, or are there also readings which suggest a deliberate editorial intervention? On the whole, P_{123} seem to have no major editorial variants; in view of the high number of faulty transmissional variants, I am not even sure if the following few cases, the only such I could find in the whole text of P_{123} , should be labeled recensional. We will come back to this question later:

- (9) – 4A, n. 3 P_{123} : 'am for dang.
 – 7B, n. 1 P_{123} : pa for cing in 'os su(s) gyur cing...
 – 7C, n. 23 P_{123} : thar pa for thar byed.
 – 8B, n. 11 P_{123} : byed cig / for byed par: P_{123} use the imperative particle *cig* without the imperative form of *byed pa: byos*.
 – 11I, n. 16 P_{123} : rgyal ba for rgyal dbang.
 – 11I (verse), n. 23–25 P_1 : de 'i tshe de dag mdo 'di thos // (also A : de 'i for de; gyur nas, which is found in P_{23} , was probably the reading of P_0 and omitted by P_1),
 P_2 : de 'i tshe de dag mdo 'di thos gyur nas /,
 P_3 : de tshe de dag mdo 'di thos gyur nas //
 for de tshe de dag gis ni mdo 'di thos //
 – 12C, n. 15, 16 P_{23} zla nya for nyi zla; P_1 : zla ba nya. (P_{123} in accordance with Ch_2 and Bth).
 – P_{123} : No colophon.

2.2 The Kanjurs of the Tshal pa Lineage

The so-called Tshal pa edition is named after the monastery where it was produced, namely Tshal Gung thang monastery in east Central Tibet (*dBus*). The colophon of the sūtra section of the Lithang Kanjur³⁴ gives the years 1347 to 1349 as the time of origin of the Tshal pa Kanjur and states that it was based on a number of source materials that formed part of the prestigious Old Narthang Kanjur, and on a copy of the Old Narthang edition itself.³⁵ This Tshal pa manuscript or one of its copies³⁶ later served as the basis for the Lithang Kanjur at

³⁴ The colophons of the Lithang Kanjur are transliterated and translated in Samten 1987.

³⁵ Harrison (1994: 297f.) doubts that the Old Narthang was more than a “collection, in some cases of multiple copies, providing the raw materials for an edition proper,” and consequently he is hesitant to call it an edition in the strict sense of the word. He further stresses that the colophon quoted in Samten 1987: 30f. is *not* to be understood as implying that a number of canonical collections in addition to the Old Narthang was used (Harrison 1992b: 80, n.14).

³⁶ Samten (1987: 17), basing himself on Tibetan sources, states that the original Tshal pa Kanjur was brought from 'Phying ba sTag rtse, where it was later kept, to 'Jang sa tham on the

the beginning of the seventeenth century after several famous Tibetan scholars had retouched the manuscript in the past centuries.³⁷ As the manuscript which served as master copy for the Lithang wood blocks was at that time kept in 'Phying ba sTag rtse, the group within the Tshal pa lineage which is based on this manuscript is called the 'Phying ba sTag rtse group.

A copy of the Tshal pa Kanjur had been utilized two hundred years earlier for the production of the earliest wood-block print edition: the Yongle 永樂 edition of 1410. This Yongle wood block became the master for all following editions in the Peking line: the Wanli 萬曆 edition of 1606 (the same blocks were used), the three Kangxi 康熙 editions (1684–1720; with new blocks) and the Qianlong edition of 1737 (using the Kangxi blocks). Though the blocks partially suffered from the effects of time, as is now well known, even the new wood blocks were produced on the basis of impressions from the old ones—a phenomenon that led Eimer to coin the term “technical identity” for all the Peking block prints.³⁸ For my edition I collated *B* and *Q* as two representatives of this Peking line. I will come back to the relation between these two later.

For the 'Phying ba sTag rtse-group, I collated *J* along with *N* and (for the main chapters 0L–9C) *D*. Concerning *N*, Tucci (1949: 479) states that according to Tibetan sources it was based on the Tshal pa Kanjur. This could well be so, given that in the studies of the *Pratyutpannabuddhasammukhāvasthitasamādhisūtra*, the *Lokānuvartanasūtra*, the *Vimalakīrtinirdeśa*, the *Drumakinnararājaparipṛcchāsūtra*, the *Udānavarga*, the *Mahāsūtras* in vol. *mdo Ra* (25), the *Abhiniṣkramaṇasūtra* in vol. *mdo La* (26), the *Sandhinirmocanasūtra* in vol. *mdo Ca* (5),³⁹ and the recent editions of the *Akṣayamatīnirdeśasūtra*⁴⁰ and the *Śālistambasūtra*⁴¹, *N* shows a close affinity with the Kanjurs of the Tshal pa lineage. However, in other cases, *N* sides with the Them spangs ma line. This seems the rule for texts of the *Vinaya* section and also for the *Puṇyabalāvadāna*, the *Sūkarikāvadāna*, the *Jñānakasūtra-buddhāvadāna*, the *Brahmajālasūtra*,⁴² and, as dealt with in recent studies, the Heart Sūtra in the *Prajñāpāramitā* and the Tantra section,⁴³ and the *Sekoddeśa*.⁴⁴

Finally, I also consulted *D*, which is known to have drawn mainly from the Lithang Kanjur but also to have incorporated readings from a copy based on the Them spangs ma, and which must therefore be categorized as conflated.⁴⁵ For any edition which does not primarily aim at illuminating the relations between the different Kanjurs but is in search of the text from which all versions may have

orders of the king of 'Jang sa tham, and there copied in order to establish a new edition. Harrison, however, states that only a copy of this Tshal pa Kanjur was used (Harrison 1992b: 80).

³⁷ See Imaeda 1982a: 179.

³⁸ Eimer 1992: 180.

³⁹ For information on the texts mentioned up to here see, Eimer 1992: xv f.

⁴⁰ See Braarvig 1993a, 1993b. Following an analysis of the variants, he states that “there is reason to assert that *N* is a direct descendent of *J*” (1993a: x) and that the cases where *N* does not follow the single variants of *J* “may be explained as recensional changes, and even as conflation with other versions.”

⁴¹ See Schoening 1995a, 1995b. According to Schoening, concerning *N* in the *Śālistambasūtra* “the wording mostly agrees with the Lithang Kanjur as opposed to the Peking tradition or West [=Them spangs ma] tradition.” (1995a: 140).

⁴² For the information on the texts mentioned till here see Eimer 1992: xv.

⁴³ See Silk 1994.

⁴⁴ See Orofino 1994.

⁴⁵ See Samten 1987: 18 f. The copy based on the Them spangs ma Kanjur was the lHo rdzong Kanjur, compiled from 1595 to 1658 on the advice of the Fifth Dalai Lama.

derived, the value of conflated material is low. When the nature of the variants of *D* became clear, after the collation of about half of the text of the *TGS*, I decided instead to invest my time in other, more promising versions.

Let us now turn to the results of my study of the variants of the Tshal pa Kanjurs. In the Peking group we have *B* and *Q*. The high number of common variants not shared by any other of the collated versions makes their close relation obvious. I will give just a few examples:

- (10) – 0E, n. 26 BQ: *par sgrags* for *bsgrags*.
 – 0I, n. 16 BQ: *rtsom* for *tshom*; JP₁₂ST: *tsom*; 0K³² BQ: *rtsom*; JP₁₂: *tsom*.
 – 0J, n. 15 BQP₁₃: *gda* for *bda*; P₂: *mnga* for *bda*: see *Bth: zhim*.
 – 1A, n. 4 BQ: *na / lha skyes bu lha 'i mig can* for *na / skyes bu lha 'i mig can*.
 – 4B, n. 13 BQ: *bgo* for *bsgo*.
 – 6A, n. 6 BQ: om. *na*.
 – 7A, n. 25 BQ: *la mi* for *lam*.
 – 8A, n. 18 BQ: *sems can dang* for *sems dang*.
 – 8C, n. 11 BQ: *ji lta* for *byis pa*.
 – 8C, n. 12 BQ: *nyid* for *ba*.
 – 9B, n. 10 BQ: *'jug* for *'dug*.
 – 10B, n. 25 BQ: *bzhin* for *zhing*.
 – 10B, n. 29 BQ: om. *gzhan*.
 – 10E, n. 20 BQ: *sems dpa* for *sems pa*.
 – 11E, n. 3 BQ: om. *las*.
 – 11H, n. 4 BQ: *rtogs so* for *gtogs so*.
 – 12C, n.1 BQ: insert *'di ni*.

There are some particular variants of *B* worth mentioning:

- (11) – 0C, n. 20 B: *nyas dang* for *nya dang*; Q: lacuna of one letter between *nya* and *dang*.
 – 0C, n. 25 BP₁₂₃: *dang / thabs* for *dang thabs*; Q: lacuna of one letter between *dang* and *thabs*.
 – 0K, n. 24; 1C, n. 6, 11, 12; 5C, n. 9, 11; 8C, n. 15; 11I, n. 9 (all verses): B reads *'i* instead of *yi* (in B *'i* can count as a syllable), Q has a compressed *yi*.
 – 1A^w B: *ston pa te* for *ston te*; Q: lacuna of one letter between *ston* and *to* [Q: *to* for *te*].
 – 2A⁷ B: *sbrang brtsi* for *sbrang rtsi*; Q: lacuna of one letter between *sbrang* and *rtsi*.
 – 2A⁹ BP₂: *pas / bskrad*; P₁: *pas // bskad*; Q: lacuna of one letter between *pas* (without *tsheg*) and *bskrad*.
 – 6A^{u,w} B: *rgyal chen por 'gyur* for *rgyal po chen por 'gyur*; Q: *rgyal po chen por* compressed.
 – 10B^{ss} B: *dpen gcig* for *dpe gcig*; Q: lacuna of one letter between *dpe* and *gcig*.
 – 10C, n. 18 BJP₁₃: *yid rang* for *yi rang*; Q: lacuna of one letter between *yi* and *rang* filled with *tshegs*.
 – 12C, n. 9 BP₂: *sngags* for *bsngags*; Q: *b-* of *bsngags* with very small letter.
 – 12D, n. 7 ABP₁₂₃: *yid rangs* for *yi rangs*; Q: lacuna of one letter between *yi* and *rangs*.

In all the cases under (11) it is obvious that the archaic, uncommon, or even wrong reading found in *B* must have also been part of *Q* or its predecessors before letters were erased or replaced, or before missing letters were inserted on the block prints by some redactor. This resulted in the lacunas or in letters which appear much smaller or compressed on the lithograph in *Q*.⁴⁶ The examples given

⁴⁶ The physical process of such alterations is described, with several examples, in Eimer 1992: 1–16; 191–202. Eimer further states that the date of a larger revision of the Peking wood blocks may have been during the production of the Mongolian Kanjur, which falls within the same period as the 1717–20 reprint (1983a: 59f.; 1992: 12). The sources for the alterations, however, are not entirely clear. In any case we must treat the Peking Kanjurs from a certain date on as conflated. (See also Eimer's study on the *Hevajratantra* II, v. 1–2, in which he shows that a new wood block containing two more *śloka*s was carved between 1684/92 and 1717/20 (Eimer 1992: 165–174).)

above thus show that *B* copied faithfully many of the peculiar or wrong readings which must already have been part of the Yongle or Wanli block print on which *B* was based.

On the other hand we find examples (12) where both *Q* and *B* have the same reading but where *Q* shows traces of emendation (resulting in lacunas etc.) which led to the reading. We could assume that these emendation were already part of the master copy of *B*, namely the Yongle or Wanli block print, and that they were adopted by the scribe of *B*. In *Q*, however, due to the “technical identity” of the wood blocks, traces of the corrections can still be found. Under (13) I have collected cases where *B* does not follow the text of *Q* which, in these passages, differs from the other Kanjurs. Examples include:

- (12) – 0D, n. 3, en. d JP₁₂₃: *drug bcu 'i* for *drug cu 'i*; *Q*: lacuna of one letter between *drug* and *cu 'i* (same situation in 0E, n. 31, en. vv). *B*: *drug cu 'i*.
 – 2C, n.15 BQ: *sol* for *sel* [*B*: *g-* of (*g-*)*sol* marked with three dots in the form of a triangle above for deletion]; *Q*: lacuna of one letter between *mongs* and *sol*.
 – 4A, n. 26 JP₁₃: *sum bcu* for *sum cu*; *Q*: lacuna of one letter between *sum* and *cu* filled with *tshegs*. (*B*: *sum cu*).
 – 10D, n. 18: *Q*: *yi* for *'i* (verse) [*yi* compressed, most probably altered from *'i*]; *B*: *yi*.
 – 11H^{II} *Q*: *ma rgyas* in *sangs ma rgyas* compressed; P₁₂₃T: om. *ma*: Obviously *Q* at first also omitted *ma* and read the common *sangs rgyas*. Later *ma* was inserted by carving the whole phrase *sangs ma rgyas* with narrowed letters. *B* reads *sangs ma rgyas*.
- (13) – 0J^r *Q*: *dbus* for *dbus*.
 – 1A^{mm} *Q*: *'khor* for *'khod*; *B*: *mtho'* for *'khod*.
 – 4C^x *Q*: *des* for *ngas*.
 – 5A¹ *Q*: *so so* for *sas*.
 – 5A^v *Q*: *stong* for *steng*.
 – 6C¹ *Q*: *yang bar* for *yod par*.
 – 7A, n. 5 *Q*: *la mthil* for *lag mthil*; *B*: *la gar thil* for *lag mthil*.
 – 7C, n. 30 P₁₂: *mi* for *ming*; *Q*: *med* for *ming*.
 – 8A^q *Q*: om. *byed* of *par byed 'gyur* [*par 'gyur* with larger spaces between the letters than usual].
 – 10D, n. 21 *B*: *snying* for *stong*; *Q*: *steng* for *stong*.
 – 12B^{mm} *Q*: inserts *yod pa* in *bla na med pa yod pa yang dag par rdzogs pa 'i byang chub*.

It is, of course, very likely that the scribe of *B* polished archaic spellings which seemed inadequate to him and that he more or less unconsciously did away with obvious mistakes in the master copy. As stated above, most of the cases under (12) can be accounted for if we assume that the wrong or uncommon readings had already been emended in the Yongle or Wanli wood blocks. In 2C, n. 15 we have to assume that the prefix *g-* was still found in the master copy of *B*, copied by the scribe of *B*, and then deleted. Later the prefix was also deleted in the wood blocks, leading to the lacuna found in *Q*.

The majority of readings under (13) can be explained by assuming that the scribe of *B* corrected obviously faulty readings when copying from the Yongle/Wanli lithograph (0J, 5A, 5A, 12B), or that one of the latter two was not clear in the concerned passage and was consequently read differently by the scribe of *B* and the carvers of the Wanli/Kangxi wood blocks, for which the Yongle/Wanli wood blocks served as technical models (1A, 4C, 6C, 7C, 10D).⁴⁷

Eimer assumes the Lithang Kanjur to be a possible source for it (p. 172). Eimer (1992: 143; 172), Harrison (1992a: xxxi), Schoening (1995a: 140; 172ff.) and Skilling (1994: xxxivf.) show that some readings of the Peking line were at a certain stage altered on the basis of a comparison with *J*. No such examples are found for the *TGS*, and two examples quoted under (12) show that those alterations cannot derive from *J*, since *J* bears the pre-emended readings.

⁴⁷ For this assumption see Eimer 2000: 32f.

The omission of *byed* in 8A may not have been a feature of the master copy which served the scribe of *B*. The fact that the spaces between the letters in that passage appear to be larger than usual means that *byed* was still in the first wood block, and only later erased, and accordingly more space became available for the single letters—space made use of by the carvers of the Kangxi edition. Regarding 7A, the term *lag mthil* may have appeared in an abbreviated form in Yongle/Wanli, and then its complete spelling may have been reconstructed differently by the scribe of *B* and the carvers of the Wanli/Kangxi block prints. As a result of the above analysis, we can say that there is no need to consider *B* as having undergone any contamination from outside the Peking tradition.

Let us now turn to the second group on the Tshal pa side. We should first focus on the relation between *J* and *N* in order to judge if it is plausible that *N* derives from the Tshal pa Kanjur, as maintained by Tucci (see above). There are several variants shared solely by *J* and *N* (and partly by *D*) whose existence would be hard to explain if *J* and *N* did not derive from the same master copy:

- (14) – 0G, n. 9 JN: *phang* for *'phang*.
 – 5A, n. 28 JN: *'khod* for *'khor*.
 – 6C, n. 12 DJN: *thob* for *mthong*.
 – 8C, n. 24 JN: *sman* for *dman*.
 – 9A, n. 5 DJN: om. *cig*.
 – 9A, n. 29 DJN: *bskogs* for *bkogs*.
 – 11A, n. 14 JN: *'khor* for *kha* [N: *'a sngon 'jug* of *'khor* in a small letter inserted later].
 – 12C, n. 3 JN: *sems dpas* for *sems dpa'*.

The variants 6C, 8C, 9A (n. 29) and 11A are of special importance, since it can hardly be imagined that they appear coincidentally in two manuscripts. Section 11A is revealing inasmuch as it documents that the reading was probably first the correct *kha* (in *skyes bu 'dul ba'i kha lo sgyur ba*) and was only later altered to *'khor* by adding the *'a sngon 'jug* within a very limited space. This fact indicates that *N* derives rather from a master copy shared with *J* (the 'Phying ba stag rtse manuscript) than from a manuscript on which also the Peking Kanjurs are based.

I must admit that the number of variants common to *JN* which I have given is not very high. The reason for this is that both *J* and *N* in general do not have a lot of variants, and many of the shared readings are only minor (*kyi* for *kyis* etc.), so that listing them here would not produce any more clarity. However, we should in any case check the relation of *N* to the Peking line (against *J*). The only serious variant of *N* common to *BQ* is:

- (15) – 12B, n. 16 BNQ: *de* for *nga*.

There is thus no reason to assume that *N* derived from a manuscript close to the Peking tradition. This makes the assertion that *N*, like *J*, is based on the 'Phying ba stag rtse manuscript more plausible.⁴⁸

Does *N* follow the Tshal pa transmission through all the text or do we find variants shared with representatives of the Them spangs ma lineage? Let us examine the nature of the variants shared between the Them spangs ma and *N*:

- (16) – 0B, n.7, 8 BJQP₁₂₍₃₎: *bzangs can* for *bzangs tsan dan*; N: *tsandan* (ཅེངས་) for *tsan dan*.
 – 0B, n. 21 BJQP_{123T}: *sems can thams* for *sems thams*.

⁴⁸ That *N* is based on the 'Phying ba stag rtse manuscript is posited in the studies of Harrison (1992a: xxx), Schoening (1995a: 131) and Skilling (1994: xxxix). Braarvig, however, states that *N* “is a direct descendent of *J*” (1993a: x) and explains the fact that several single readings of *J* do not appear in *N* as “recensional changes, and even conflation with other versions” (p. 131, n. 3).

- 0H n. 7 BJQP₁₂₃: om. *kyang*.
- 0I, n. 2 BJQ: *tsom* for *tshom*.
- 0I, n. 16 BQ: *rtsom* for *tshom*; JP₁₂ST: *tsom*.
- 0L, n. 6 BJQ: om. *yid la*.
- 2B, n. 4 BJQP₁₂₃: om. *de*.
- 3B, n. 1 BJQP₂T: om. *de bzhin du* (*aberratio oculi*).
- 4A, n. 16 BJQ: om. *gzhan dang* (*aberratio oculi*).
- 4B, n. 2 BJQ: om. *la*.
- 5C, n. 14 LN: *'thob* for *thob*; S: *methob*.
- 6C, n.17 BDJ: *spang* for *sbyang*; Q: *spang* or *sbang* (?).
- 11D, n. 5 BJQ: om. *nas*.
- 11G, n. 19 BJQP₁₂₃: om. *phra rab kyi rdul*.
- Throughout the text: BJQP₁₂₃T: *pad ma* for *padma* (LSN: བཤོན་); only in 0G, n. 20 BJQ: *pad mo* for *padma*; N: *padmo*; P₁₂₃T: *pad ma*.
- Throughout the text: NS: *ganggā* (རྩོམ་); L: *gangga*; BJQT: *gang gā* (B in two passages with P₁₂₃); P₁₂₃: *gang ga*.

The number of major variants where *N* sides with the Them spangs ma Kanjurs is surprisingly high. Among them are, it is true, several stock phrases and terms appearing in other passages of the *TGS*, which could easily have been emended without drawing on other versions (e.g. the list of attributes of *arhats* in 0B appearing regularly in sūtra literature). In other instances it is impossible to explain in this way why *N* displays the same reading as (all) representatives of Them spangs ma against the Tshal pa family (e.g. the non-omission of (the *aberratio oculi*;) *gzhan dang* in 4A), so that we must assume that the editors of *N* accessed an unknown text of the Them spangs ma family which they sometimes preferred to follow. The situation is thus very similar to the *Śālistambasūtra*, concerning which Schoening states: “The position of *N* is curious because it usually agrees with the Eastern tradition, in particular with *CJ*, and yet in a handful of cases it has Western readings. In each of these instances, *N* was probably emended either by contamination with the Western tradition or independently by scribes or editors.”⁴⁹

The number of common variants with the Them spangs ma group in the *TGS* is too low to allow an opinion where the version used for the emendations could have come from. One realistic possibility would be the Shel dkar rdzong manuscript, which we know served as the basis for a number of edited works in *N*.⁵⁰

It remains to inquire about the position of *D* within the stemma of Kanjurs as it pertains to the *TGS*. The Derge Kanjur is well known to be a conflation of *J* and the so-called lHo rdzong Kanjur, a Kanjur which was produced on the basis of the Them spangs ma, with or without an intermediate copy.⁵¹ In the case of the *Akṣayamatīnirdeśasūtra*, however, the Derge version turned out to be a copy of

⁴⁹ Schoening 1995a: 170; further see Pagel 1999: 204.

⁵⁰ Cf. Eimer 1992: xv. The Narthang Kanjur was carved near Shel dkar rdzong, the place where *L* was also copied from the manuscript Kanjur kept at the monastery of Shel dkar (see Harrison 1992b: 80, Pagel and Gaffney 1996: ix). Braarvig (1993a: x) reports that *N*, which in the case of the *Akṣayamatīnirdeśasūtra* is based on *J*, supplied part of the text (one whole folio obviously missing in the early Tshal pa tradition) by drawing on the Them spangs ma version. It would be interesting to see which of the representatives of the Them spangs ma line comes closest to *N* in this passage.

⁵¹ Harrison 1992b: 79.

“the first Tshal pa manuscript, or an early copy of it” and could thus “be considered a better transmission of the original Old sNar than *JNQ*, though correct readings may of course have been preserved in *JQ*, readings lost in the transmission to D[erge (Prague)].” (both Braarvig 1993a: x-xi).

Are there any variants which suggest that in the case of the *TGS*, too, *D* may be the copy of an earlier, better representative of the Tshal pa lineage? If so, this would mean that *D* has unique archaic readings and variants which produced a better transmission of the Tshal pa line than *BJ(N)Q*. What about the single variants of *D*? They include:

- (17)
- 1A^q D: 'gyed for 'byed; B: byed; Q: 'phyed.
 - 4Cⁱ D: *bzhig* for *ba zhig*.
 - 5A^{ff} D: inserts *byed* (dittography).
 - 5B^z D: *slobs* for *spobs*.
 - 5Cⁱⁱ D: *shig* for *shes*.
 - 7A^m D: 'dong bar for 'dod par.
 - 7C^w D: *mi* for *ni*.
 - 8Cⁱ D: *des* for *dus*.
 - 9A^{dd} D: *gyis* for *gyi*.

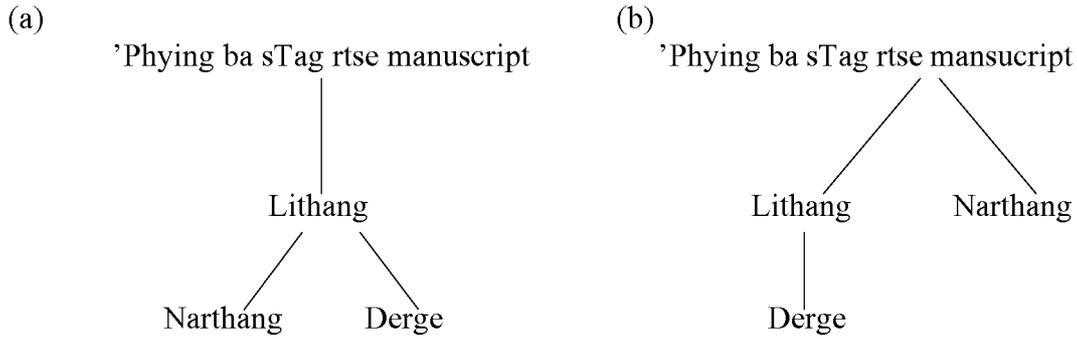

It is obvious that none of the variants can be said to represent a better reading than the other versions do. They are all explainable as mistakes made by the copyist. There is thus no reason to conceive of *D* as a representative of the early Tshal pa tradition.

The affiliation of *D* with both main transmissional lines is also obvious. It shares enough variants with *BJNQ* (in particular, the punctuation: it drops the *shad* together with *BJNQ* not less than 83 times) to allow it to be based on the Tshal pa tradition. On the other hand, the apparatus documents numerous cases in which *D* sides with *LST*—a fact that leaves no room to doubt that the editors also drew upon the lHo rdzong Kanjur to establish the text of *D*.

That *D* is part of the 'Phying ba sTag rtse group in the Tshal pa family is clear from the common omission of *shads* in 15 cases and other variants shared with *JN* but not with other representatives of Tshal pa:

- (18)
- 1A, n. 30 DJNL: *srid* for *sred*.
 - 1C, n. 9 DJN: *gos de* for *gos te*.
 - 1C, n. 20 DJN: *gis* for *gi*.
 - 6C, n. 12 DJN: *thob* for *mothong*.
 - 8C, n. 9 DJNP₁₂₃: *kyi* for *kyis*.
 - 9A, n. 5 DJN: om. *cig*.
 - 9A, n. 29 DJN: *bskogs* for *bkogs*.

Given that *D* is based on *J*, is it possible to draw any conclusions on the question whether *N* is a direct descendant of *J* or if it is a sister of *J*? Let us examine the nature of the variants shared by *DJ*, *DN* and *JN*. The two competing models for the relation of *DJN* are:

If we turn to the variants shared by *DJ* (but not *N*), we find the following examples:

- (19) – Throughout the text: BDIQP₁₂₃T: *pad ma*; (LSN: པད་མེ). [General preference of *N* for transliterations written without intersection]
 – 3A, n. 7 DJ: om. *de*.
 – 4B, n. 8 DJ: om. *.*
 – 4C, n. 11 BDJ: *'di ni* for *'di na*.
 – 6C, n. 17 BDJ: *spang* for *sbyang*; Q: *spang* or *sbang* (?). [*N* emended to *sbyang ba* “to purify,” common in the *TGS*]
 – 7C, n. 28 BNQ: *kyis* for *kyi* (DJLSTP₁₂₃: *kyi*).

Variants common to *JN* (but not *D*):

- (20) – 2A, n. 4 BJNQLSP₃: *ba //* for *ba /*.
 – 2A, n. 18 JN: *gis* for *gi*. [*Gis* is obviously erroneous in *sbrang tshang gis nang na*.]
 – 4A, n. 6 JNQP₃: *ci* for *gci*; n. 11 JNQP₁₂₃: *ci* for *gci*. [The Derge editors emended to the *MVy* standard: *bshang gci* (*MVy* 2626–2628).]
 – 4B, n. 11 BJNQLP₃: om. *gser gyis* [The omission contradicts the same construction in 2A.4f.; probably, therefore, *gser gyis* was inserted by the Derge editors.]
 – 4B, n. 20 JN: *kyis* for *kyi*. [*Kyis* is obviously erroneous in ... *sangs rgyas kyis tshig bla dags so //*.]
 – 5A, n. 28, 29 JN: *'khod de* for *'khor te*; BQ: *'khor de*. [The Derge editors selected the well-known formulation ... *'khor ba na 'khor te /*: “to wander around in saṃsāra.”]
 – 6C, n. 13 JN: *bshigs* for *bshig*; P₃Q: *pa shig* for *bshig*. [The Derge editors probably felt *bshig* adequate as the perfect form of *'jig pa*, with *gzhiḡ* as the future form.]
 – 6C, n. 15 BJNQP₁₂₃: *gang* for *nang*. [The pāda according to *ADLST* seems to have a clearer meaning: *mi shes nang na gnas kyang rlom sems med //*. That this is the original sense is confirmed by *Bth* (*dbus*) and *Ch*₂ (ཇམ་མཚོ་).]
 – 7C, n. 9 JN: *bor de* for *bor te*. [The Derge editors emended to the standard.]
 – 8C, n. 22 JN: *ma shes gyis* for *ma shes kyi*; BQ: *bgyis*. [The imperative form *gyis* from *bgyid* does not make sense here.]
 – 8C, n. 24 JN: *smān* for *dman*. [The reading *smān* “medicine” here is meaningless and was therefore emended by the Derge editors.]

Variants common to *DN* (but not *J*):

- (21) – In three passages: DNLST: *de bzhin gshegs pa'i sku gzugs* for *de bzhin gshegs pa'i gzugs*. [*DN* is made honorific.]
 – 0L, n. 6 BJQ: om. *yid la*. [*DN* adopt the stock phrase.]
 – 1B, n. 9 DNP₃S: *-s zhes* for *-s shes*.; 5B, n. 1 DN: *-s zhes* for *-s shes*. [*DN* adopt the standard; see *Tshig mdzod* s.v. *zhes*.]
 – 2B, n. 4 BJQP₁₂₃: om. *de* of *de bzhin du*. [The term *de bzhin du* appears often in the *TGS*, and *de* was therefore probably thought to have been inserted in line with Them spangs ma.]
 – 3B, n. 1 BJQP₂T: om. *de bzhin du* (*aberratio oculi*).
 – 4A, n. 16 BJQ: om. *gzhan dang* (*aberratio oculi*).
 – 4B, n. 2 BJQ: om. *la* of *la bltas*.
 – 4C, n. 16 BJQP₁₂T: *glo bur* for *blo bur*.
 – 5A, n. 17 BJQ: *'dug go // zhes* for *'dug go zhes*.

- 7A, n. 33 BJQP₃: *kun du* for *kun tu*. [*DN* adopt the *MVy* standard.]
 – 8C, n. 4 DNP₁₃: *re zhig* for *re shig*. [*DN* adopt the *MVy* standard (8132).]

In any case, we should keep in mind that both *D* and *N* are conflated with the Them spangs ma line, so that there is always the possibility that one or both of them did not follow the text of the master copy but adopted a Them spangs ma reading. If *D* or *N* thus does not share a reading with *JN* or *JD* respectively, the variant is only significant in those cases where *D* or *N* is not easily accounted for as an obvious mistake of the scribe (single variant reading) and if it is not in accordance with the Them spangs ma versions. Otherwise, we cannot exclude the possibility that *D* or *N* was altered on the basis of the Them spangs ma, and so it would be inappropriate to make statements about the stemmatic relation of *DJN*. We should investigate the nature of the variants in order to see if there are convincing reasons which could have led the editors of *D* or *N* to give preference to the Them spangs ma reading. There are only two variants which fulfill both criteria stated above:

(19) – 7C, n. 28 BNQ: *kyis* for *kyi* (DJLSTP₁₂₃: *kyi*), where *N* sides with *BQ*, and *DJ* could well represent a better Tshal pa reading in accordance with *LST*. That *kyi* in *bde bar gshegs kyi ye shes yongs bkrol nas //* is the right reading in this case is attested by the parallel in *Bth*: *yang grol bder gshegs yeshes te* .

(20) – 2A, n. 4 BJNQLSP₃: *ba //* for *ba /*, an uncommon case where the majority of witnesses use *nyis shad* after the description of the honeycomb hanging ('*phyang ba //*) from the branch of a tree.

Neither case is revealing, and hence we need to investigate the nature of the other variants. In most cases I have, after the variant, given a plausible reason for the editors' alteration according to the Them spangs ma. I cannot, however, find any good reason why the editors of *N* should have emended the variants 3A, 4B and 4C in (19) against the reading attested for *J* and Derge. One solution may be to assume that *N* is in fact a sister copy of *J* and the three readings in question are variants found in *J* and continued by *D*, but not found in the 'Phying ba sTag rtse manuscript. The emendations of 3B, 4A, 4C and 5A in (21) are not easy to explain either. We can generally assume that editors who had the choice between two alternatives tended to prefer the textually more extensive alternative, whenever there was no notable difference in content. For them to drop some words of the Buddha would have seemed worse than not doing so. This argument applies to 3B and 4A; for 4B, grammatical reasons must have been decisive. The passages in 4C and 5A may simply have involved the personal taste of the editors.

Some questions remain: Why did the editors of both Derge and *N* follow the Them spangs ma in emending *gzugs* to *sku gzugs* in the case of the Buddha and leave *mig* unchanged, whereas *LST*, again concerning the Buddha, continuously employ *spyen* instead? What were the guidelines for the editors of the two Kanjur projects that led them to decide the same questions differently?

Through the analysis above it has become clear that the number of readings shared by *D* with the Them spangs ma line is higher than those shared by *N*. Both *D* and *N* seem to be based mainly on manuscripts related to 'Phying ba sTag rtse. Though this is far from being proven, three of the readings cited in (19) indicate that, as far as the *TGS* is concerned, *N* does not descend from *J* but rather is a sister copy of it. As to the position of *D*, it can only be asserted that it is not

affiliated with the early Tshal pa transmission, as is otherwise the case for the *Akṣayamatīnirdeśasūtra*.

2.3 The Them spangs ma Kanjurs

Given the high number of variants shared only by *LST*, it is clear that, regarding the *TGS*, we should view these three versions as descendants of a common ancestor—the Them spangs ma Kanjur. Tibetan tradition has it that the Them spangs ma Kanjur was copied in 1431 from the Old Narthang manuscript and then deposited in the dPal ’khor chos at Gyantse.⁵² Whereas the Tokyo manuscript Kanjur from Gyantse is said to be a direct copy of the Them spangs ma Kanjur⁵³ (which for the moment remains the only one accessible to Western scholars), we know that there were intermediaries in the case of the Shel dkar manuscript Kanjur (London) and the Stog Palace manuscript Kanjur. The Shel dkar manuscript Kanjur was based on the Shel dkar chos sde, a manuscript kept at Shel dkar in southern Tibet. That the Shel dkar chos sde was a copy of the Them spangs ma, however, is confirmed by a remark in the colophon of the *brGyad stong pa* volume of the Shel dkar manuscript Kanjur.⁵⁴ The Stog Palace manuscript Kanjur derives from a Bhutanese original, which could well be the Bhutanese copy of the Them spangs ma.⁵⁵

Most of the text-critical studies have so far proved that the Shel dkar manuscript Kanjur, the Stog Palace manuscript Kanjur and the Tokyo manuscript Kanjur agree closely with each other, and differ significantly from the Tshal pa Kanjurs. A further argument for the close relation between the three Kanjurs and the Them spangs ma is the resemblance in the arrangement of texts, which is in accordance with the description of that of the Them spangs ma provided in the *gsan yig* of two Tibetan masters.⁵⁶

What, then, is to be said about the relation between *L*, *S* and *T* in the case of the *TGS*? Indicative common variants of *S* and *T* include:

- (22)
- 0K, n. 9 ST: *sngan cad* for *sngan chad*.
 - 4B, n. 5 BDJNQLP₁₂: *ni* for *na*.
 - 8C, n. 10 ST: *bzhugs* for *zhugs*.
 - 9B, n. 7, 8 ST: om. *kyi chos* in *sangs rgyas kyi chos kyis* (*aberratio oculi*).
 - 11H, n. 15 P₁₂₃ST: *dung du yang* for *dung yang* [P₃: *rung* for *dung*].
 - 12C, n. 17 BQST: *lta* for *blta*.
 - 12D, n. 11 JST: *rdzogs so*; N: *rdzogso*; (ABQLP₁₂₃: རྩོགས་སོ་).

⁵² Eimer 1983a: 95, 102; Pagel and Gaffney 1996: xi. Skilling (1994: xlii-xliii) doubts that the Old Narthang functioned as a master copy, given the evidence from all the texts used in his study and from the biography (fifteenth century) of Situ Rab brtan kun bzang ’phags pa, the sponsor of the Them spangs ma—in all of which no such association is made. I will deal with this question later.

⁵³ See Eimer 1992: 179. As Skilling (1994: xliii-xlv) convincingly shows, we probably have a number of Them spangs ma Kanjurs that were later revised editions. The phrase “a direct copy” thus must be used cautiously. Eimer states that manuscripts of the Them spangs ma Kanjur were copied in Gyantse for more than four centuries, starting as early as 1439 and running up to the time of the Tokyo manuscript Kanjur, which was copied between 1858 and 1878 (Eimer 1992: 178f.; Saitō 1977: 6 (401)).

⁵⁴ Pagel and Gaffney 1996: ix.

⁵⁵ Skorupski 1985: xi-xii.

⁵⁶ Samten and Skilling in Pagel and Gaffney 1996: 1.

Variants shared by *L* and *T*:

- (23) – 9A, n. 18 LT: *de na* for *de nas*.
– 10E, n.1 LT: om. 'i in *bcos bu'i ras* (verse).
– 11B, n. 15 BJNP₁₂₃S: *bar* for *ba* in *dga' ba byed pa*.
– 11C, n. 11 LT: *na* for *du* in *lha dang mi rnams kyi nang du skyes so*.
– 11H, n.7 P₁₂₃T: om. *pa* in *yin pa snyam du* (L: *pa* inserted later in a small *dbu med* hand above the line).
– 12B, n. 16 BNQ: *de* for *nga*; LT: om. *nga* in *nga bzhin du* (see *Bth: da ltar nga*).

Variants shared by *L* and *S*:

- (24) – 0B, n. 21 BJQP₁₂₃T: *sems can* for *sems*.
– 3B, n. 1 BJQP₂T: om. *de bzhin du* in *de bzhin du de bzhin gshegs pa* (*aberratio oculi*).

The number of pairwise variants within *LST* is rather low, and among them several are clearly trivial: both variants in (24) are due to mistakes by *T*. In the first case *can* is erroneously added to *sems*, the subject being the mind (*sems*) of an *arhat*. The second case is a simple *aberratio oculi* documented also in other versions and reappearing in sections further down. Thus no indicative variants common to *L* and *S* remain.

In (23) the first three common variants may be called trivial and so are not very indicative, while the following two have most probably not arisen independently. Meaningful are the variants 0K, 9B and 11H of (22). The reading *rdzogs so* instead of *rdzogs s_ho* in 12D is but a standardized modern spelling in *S* and *T*, both manuscripts of relatively late origin.

The number of indicative variants is too few to allow definite conclusions to be drawn on the relation among *L*, *S* and *T*. Nevertheless, the fact that *LS* never share mistakes vis-à-vis *T*, or, in other words, that *T* shares some variants with *L* and other variants with *S*, requires explanation. One possible solution is the assumption that *T*, in fact, is the version among *LST* closest to the Them spangs ma Kanjur. The high number of single variants found in *T* probably has its roots in part in the copyist of *T*; another cause may have been an erroneous master copy—the Them spangs ma manuscript or a (reedited) copy of it. When the Shel dkar chos sde, the master copy of *L*, and the Bhutanese manuscript, that is, the master copy of the Stog Kanjur, were copied from a Them spangs ma manuscript, we may assume that they were at the same time checked against another version so as to discover possible mistakes in the Them spangs ma text. Variants shared alone by *ST* should thus constitute a reading found in the Them spangs ma, perpetuated by *S* but altered by the Shel dkar chos sde editors or the editors of *L* on the basis of another non–Them spangs ma manuscript. The same process is imaginable for variants of *LT*: in this case it could be either the editors of the Bhutanese Kanjur or of the Stog Palace Kanjur who collated another manuscript in order to correct supposed mistakes found in the text. The nature of some of the variants given above makes it very unlikely that such mistakes in the master copy, be it the Them spangs ma manuscript or a later copy of it, could have been recognized without the help of other manuscripts, most probably ones from outside the Them spangs ma tradition.⁵⁷

⁵⁷ The assumption that the editors of the Shel dkar chos sde or the Bhutanese Kanjur could have compared their master copy, probably a copy of the Them spangs ma manuscript, with a much less error-laden earlier version or even the original of the Them spangs ma when producing their new Kanjur is not quite plausible. Why should they then have made use of the inferior later version at all?

Such an assumption needs to accommodate the three points below. Granting that the new editions basically followed the Them spangs ma manuscript, it should be possible to state what led the editors to adopt or reject the reading of a different text.

- 1) The Them spangs ma reading of *T* is in any case clearly inferior when compared with the new reading adopted by the editors of both *L* and *S*.⁵⁸
- 2) In the case of the combinations *LT* against *S* on the one hand and *ST* against *L* on the other, each side of the combination cannot afford to be obviously faulty, since otherwise it would be difficult to explain why the editor of *S* or *L* respectively did not adopt the correct reading.
- 3) All readings shared by *LST* cannot afford to be easily recognizable as mistakes when compared with an alternative non–Them spangs ma variant, because it would otherwise be implausible that the editors of both *L* and *S* refrained from emending it.

As to the first point, concerning the variants shared by *L* and *S* under (24), it is obvious that in 0B *LS* represent the correct reading, since the subject is the mind (*sems*) of an *arhat*. Concerning 3B, *T* presents an obvious *aberratio oculi* which, if not caused later by the scribe of *T*, was detected by the editors of *L* and *S* and emended.

Concerning the second point, we have to account for the variants noted in (22) and (23). Among them we find ones which tell us more about the individual tastes of the scribes than about the correctness of a reading: *snang cad* (*cad* is an archaic spelling of *ST*) instead of the standard spelling *snang chad* (*L*; surprising, given that *L* is the older manuscript!), *bzhugs* for *zhugs* (in the case of the *cakravartin* embryo in the womb), *dung du yang* for *dung yang*, *lta ba'i 'os* for *blta ba'i 'os*, *rdzogs s_{ho}* for *rdzogs so*, *de na* for *de nas*, *bcos bu ras* for *bcos bu'i ras* in the verse section, *dga' bar byed pa* for *dga' ba byed pa*, and *lha dang mi rnams kyi nang na skyes so* for *lha dang mi rnams kyi nang du skyes so*.

In the case of 4B ('*di ni* or '*di na*), the context allows both readings equally well. The editors had no criteria for deciding on the correctness of the variants. Concerning (22) 9B, if we read the passage according to *ST* (which omit *kyi chos*), namely as ... *nyon mongs pa'i sbubs kyi nang gi sbu gu sangs rgyas (kyi chos) kyis gang ste /*, it is clear that the text of *ST* makes just as much sense and is in accordance with the main line of the *TGS* in stating that "... the cavity inside the ... defilements is filled with (the qualities of) a buddha." Thus, again, this passage does not violate the principle that both readings could be applied by the editors with equal justification.

From the standpoint of classical Tibetan grammar, in (23) 11H, only *S* reads correctly ... *yin pa snyam du*, whereas *T* omits *pa*; in *L* *pa* is inserted by a later corrector in an *dbu med* hand. However, to argue that the reading without *pa* is a major mistake which an editor would immediately emend is not possible since we find several cases in different editions of the *TGS* in which the particle *pa/ba* or a particle of finality/question has not been used before *snyam* (see 0I.7; 3B.8; 7B.9; 8A.8).

In 12B, however, *S* together with the majority of manuscripts and prints reads the correct *nga bzhin du* (also *Bth: nga la bzhin no :*), whereas *LT* simply

⁵⁸ We could alternatively assume that the inferior variant of *T* was introduced by the scribe of *T* after the master copy of *T* had already been used to establish the predecessors of *L* and *S*.

have *bzhin du*; *BNQ* contain *de bzhin du*. The passage without *nga* or *de* reads *de ni ji ltar da ltar bzhin du....* (I cannot find any coherent sense in this wording). Here, the question why the editor of *L* has not emended the text remains open. I have no satisfactory answer to it.

Regarding the combination *LST* in relation to non–Them spangs ma readings (3), we are confronted with a number of inconvenient variants:⁵⁹

- (25)
- 0G, n.1,2 LST: om. *du nang* in ... *nyid du nang du yang....*
 - 0L, n. 8 BDJNQ: *dang ngas bshad*; P₃: *dang / ngas bshad* (stock phrase!).
 - 0M, n. 34 LST: *de bzhin gshegs pa spyan* for *de bzhin gshegs pa'i mig*.
 - 0M, n. 37 BDJNQ: *de bzhin gshegs pa'i snying po can du* for ... *por*.
 - 1B, n. 2 DLSTP₃: *de bzhin gshegs pa'i snying po can yin*.
 - 6A, n. 10 ALSTP₁₂₃: om. *na* in '*jig rten na gnas pa*.
 - 10D, n. 26 LSTP₃: *mchu dang rgyar* for *chu dang rgyar*.
 - 11D, n. 18 LST: om. *yang* in *na /¹ yang* [¹ ABJNQ₁₂₃: om. /.].
 - 12A, n. 29 LST: om. *chos* in *chos bstan pa'i....*
 - 13, n. 4 (colophon) LST: om. *skad gsar bead kyis kyang beos nas*.

As I have already stated above, I assume that the general tendency of the editorial process should be to maintain rather than to omit words when forced to select one of two alternatives. In the case of *LST* this principle does not hold true in 0L, 6A, 11D, 12A, to a certain extent in 0G, or in the colophon which, to be sure, enjoys a special status. I have not cited the examples where *LST* clearly follow this principle. In almost all of the six passages where *LST* are lacking words I cannot find a reason which could have kept the editors from adopting the more comprehensive variant. In the case of 11D, we could argue that *yang* was not adopted because the *shad*, which is missing in all other editions, needs to remain after *na*. The appearance of *yang* immediately after the *shad* would, of course, be rather uncommon. 0G, however, is a particular case, for neither of the two main traditions has preserved the supposed original wording there.

The passage in 6A is rather dubious, and the fact that the variant is shared with *A* and *P*₁₂₃ indicates that the omission of *na* is in fact the original reading. Nevertheless, it is difficult to make sense of the passage without *na*, so that it is surprising that the editors of *S* and *L* did not adopt it. It is difficult to imagine that they had a chance to judge the genuineness of the missing *na* on a basis comparable to ours, and so to be led to refrain from inserting it.

The omission of the genitive particle in 0M, however, could be an archaic element which escaped the notice of the editors since the master copy, in any case, already read *spyān* instead of *mig*.⁶⁰ The spelling *mchu* instead of *chu* in 10D could be meant to differentiate it from *chu* meaning “water,” though no other examples of this spelling are known to me.

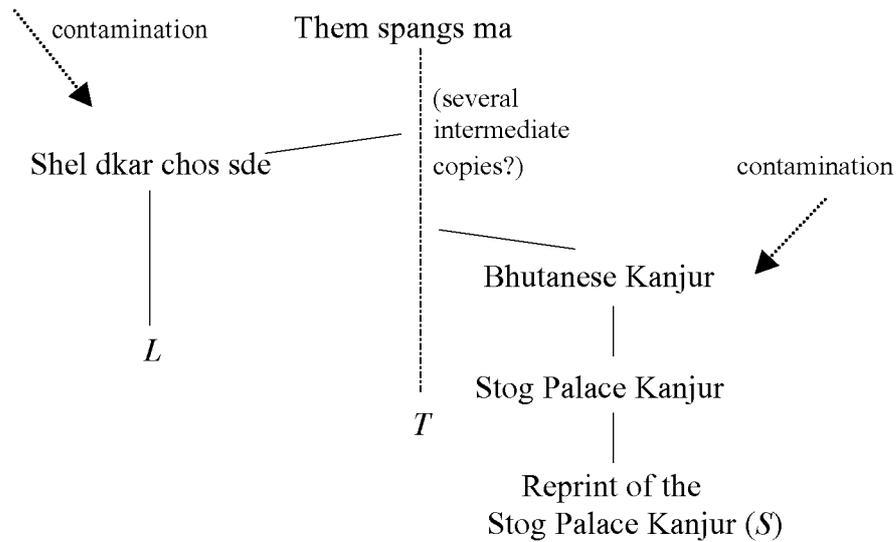

I have no answer to the question why the particle *can* is not added by the editors of *L* and *S* to *de bzhin gshegs pa'i snying po* at the end of 0M, whereas it appears in 1B, where living beings are similarly characterized as *tathāgatagarbha*. However, we cannot exclude the possibility that the manuscripts used as the sources for the emendations introduced into *L* and *S* were not identical with any surviving manuscripts. They could well have been texts which, to a certain extent,

⁵⁹ Here I have extracted only the problematic cases from a high number of *LST* variants.

⁶⁰ Panglung observes that the Tanjur version of the *sGra sbyor bam po gnyis pa*, in comparison with its Dunhuang fragments, inserts “particles of the genitive case, or *dang, du*” and thus “contributes to clarify the meaning of the sentences and to render the concise style of the Ta pho version more smoothly” (Panglung 1994: 172).

were conflated with readings from the Them spangs ma line, which itself would not contain some of the words likewise not found in *LST*.

As stated before, the number of variants regarding the relation of *LST* is too low to allow definite settlement of the question of their stemma within the *TGS* family of manuscripts. As to the stemmatic relation among *LST* which I have hypothesized, there remain the above problematic variants. Nevertheless, none of the readings in (25) essentially affect the content of the passages in question, nor are they easily recognizable as mistakes without the help of a more refined text-critical *instrumentarium*. Graphically, the imagined stemma of *LST* looks approximately like this:

The combination *LST* should thus represent the original Them spangs ma reading. If only *L* and *S* share the same reading, then there are two ways to account for this. What occurs in *T* could be a mistake introduced by the copyist of *T* or some manuscript in the line of *T* after the copying of *L* and *S* or, as the second alternative, the reading of *T* could in fact be the original reading of the Them spangs ma which was altered to a superior reading independently of each other by the editors of the Shel dkar chos sde or *L*, on the one hand, and by the editors of the Bhutanese Kanjur, the Stog Palace Kanjur or *S*, on the other. In most of the cases, as the nature of the variants show, the copyist of *T* is very likely to be the main source for the single readings of *T*. As stated above, there are many single variants in *T* resulting from inaccuracy.

The combinations *LT* and *ST* can also be explained in two ways. If the reading of *S* against *LT*, and *L* against *ST* is not an erroneous single variant, it could well be a revised reading introduced by the editors of *L* or *S* or one of its master copies on the basis of a comparison with a manuscript from outside the Them spangs ma tradition. When this contaminative factor was introduced into the separate transmission lines of *L* and *S* is impossible to say. The question with which line the manuscripts used for the emendation were associated is not answerable either. The Kanjurs of the Peking line, however, are not possible candidates, as the variant 11C, n. 3 proves.⁶¹ The suggestion that *S* is

⁶¹ In 11C, n.3 *AJNLSTP*₁₂₃ read *gzi brjid* against *BQ*: *gzi brjid chen po*. If, in the description of the beneficial result of the light of a bodhisattva touching living beings, the revisers of the master

contaminated by Derge was originally brought up by Eimer (1982: 129) and discussed again by Orofino (1994: 34). If this is so, contamination of *S* by *D* in the particular case of the *TGS* cannot be ruled out. But for *L* or its ancestor, this possibility does not arise, since *L* came into existence about twenty years before the Derge Kanjur.

My suggestion for the possible relation among *LST* contradicts in several aspects the findings of previous studies. *S* is usually assigned a position within the Them spangs ma group apart from *LT*. Harrison, in his study of the *Drumakinnara-rājaparipṛcchāsūtra*, rules out any contamination of *S* (1992a: xxv-xxvi) and explains the close similarity of *LT* as due to “the use of an intermediary copy to produce *L* and *T*” (p. xxvii). The *Drumakinnara-rājaparipṛcchāsūtra* does not show any indicative variants common to *S* and *T* which are not also shared by *L*. In the case of the *Mahāsūtras* the situation seems to be different. Skilling characterizes *S* as “a copy of a descendent of a more perfect edition, while *L(N)T* are copies of a less perfect different edition” from a number of various Them spangs ma Kanjurs (1994: xliv-xlv). Finally, as mentioned above, there are the studies of Eimer and Orofino, which qualify *S* as most probably contaminated by a manuscript from the Tshal pa tradition.⁶²

2.4 The Position of *Bu*

Not much can be said about the affiliation of the parts of the *TGS* cited by Bu ston in his *De bzhin gshegs pa'i snying po gsal zhing mdzes par byed pa'i rgyan*. The length of the quotations is obviously not enough to decide whether *Bu* is more closely affiliated with one of the main groups.⁶³ Its punctuation sides sometimes with *LST*, and at other times with *BDJNQ*. *Bu* seems to have preserved a text free from the particular readings of the *P*₁₂₃, Tshal pa and Them spangs ma tradition: it does not share the erroneous variant of *BDJNQ* in 1A, n. 22: *ba* for *la*, the mistakes of *P*₁₂₃, and the replacement of *mig* with *spyān* and the probably non-original adding of *can* to the term *de bzhin gshegs pa'i snying po (can)* in 1A by *LST*.⁶⁴ On the other hand, *Bu* introduces several unique readings which can clearly be characterized as recensional. They document that Bu ston had his own idea of how certain passages should be read in order to obtain a smoother and more elegant Tibetan text. The main textual “improvements” are:

- (26) – 1A *Bu*: *skyes bu lha'i mig can zhig gis / 'di ltar / kha dog ngan cing...*
 for *skyes bu lha'i mig can la la zhig gis / lha'i mig gis 'di ltar kha dog ngan cing / ...*:
Bu omits *la la*, which is already expressed by the following *zhig* “someone”; *Bu* further omits the somewhat redundant *lha'i mig gis*.
 – 8B *Bu*: *khyed bdag nyid la spro shi bar ma byed par* for *khyed bdag nyid spro shi bar ma byed par*: The archaic expression *sro shi ba* (see *Tshig mdzod* s.v. *sro shi ba*: (*rnying*))

copies of *L* and *S* were confronted with a choice between the two alternatives, they would most probably have decided for the addition of *chen po*.

⁶² Silk and Skilling do not take a firm stand on the question of the position of *S*. Silk remarks that he cannot adequately explain the fact that *L*, *T* and *N* sometimes disagree with *S* (1994: 25f.). Braarvig restricts his text-critical edition to a collation of *S* and *T* within the Them spangs ma group.

⁶³ Further, for the passages of the *TGS* cited in *Bu*, the folios of *A* are missing.

⁶⁴ For the hypothesis that Bu ston (1290–1364) and other scholars from Zha lu may have been the main persons responsible for the editing process of the Them spangs ma Kanjur (1431) see Harrison 1994.

dpa' zhum pa /: “despondent”), probably no longer common at that time, was changed to *spro shi*, lit. “cessation of joy”. Furthermore, *bdag nyid* was clearly marked as the object with the preposition *la*.

– Bu continuously uses *rkyang shad* after the address *rigs kyi bu* (*dag*).

2.5 The Position of *A*

Several studies have included the Tabo manuscripts in critical editions.⁶⁵ In a further study two manuscript folios of the *sGra sbyor bam po gnyis pa* have been interlinearly arranged within a critical edition.⁶⁶ The evaluated material has so far been very limited, so that generalizations cannot readily be formulated from the results of these studies. In the case of the *Sambandhaparikṣā* (Tanjur), Tauscher could convincingly show that the Tabo version “is independent of the four major canonical editions and thus reflects a version of the texts prior to the oldest common source of these editions,” that “in many cases the T[abo] readings are better than the canonical ones” and thus “closer to the original Tibetan translation.”⁶⁷ The Tabo fragments of the *sGra sbyor bam po gnyis pa*, in comparison with its corresponding Tanjur and Dunhuang versions, turned out to be a less elaborate version issued some twenty or thirty years earlier. The later Tanjur and Dunhuang versions, on the other hand, can be said to have resulted from increased experience in translating Indian texts into Tibetan and thus to contain more refined and enlarged guidelines for translational activities than the earlier Tabo version.

In the case of the *TGS*, is it possible to assert an independent position for *A*? Does *A* represent a version of the *TGS* closer to the original Tibetan translation? The second question will be answered in the following section by way of an evaluative study of the variants in comparison with the other versions.⁶⁸

The unique position of *A* becomes obvious from a number of major recensional single readings listed in (31) below. Neither in punctuation⁶⁹ nor in variants can *A* be said to side exclusively with one of the three other groups. *A* shares readings with each of them. Some of these readings are:

- (27) – 5B, n. 3 *A*: *la sngon ma byung ba sngon ma byung ba 'i* (dittography); LST: *la sngon ma byung ba 'am // * sngon ma byung ba 'i* [*L: /].
 – 6A, n. 10 ALSTP₁₂₃: om. *na* in 'jig rten *na gnas pa*.
 – 10D, n. 24 BJNQ: *pa //* for *pa 'i //* (verse).
 – 11H, n. 21 BJNQ: *bzhi po 'o* for *bzhi pa 'o*; L: *bzhi 'o*; ST: *bzhi 'o* [T: *bzhi* at end of line].

⁶⁵ For instance, a part of the *Pañcaviṃśatikā* (de Rossi Filibeck 1994) and, for the Tanjur, a part of the *Sambandhaparikṣā* (Tauscher 1994). In regard to the relation between the Tabo *Pañcaviṃśatikā* and the canonical version, de Rossi Filibeck only remarks that there are no substantial variations. The versions just differ in regard to absence or inversion of words (p. 138). Further see the studies in Scherrer-Schaub and Steinkellner 1999; also Pagel 1999.

⁶⁶ See Panglung 1994.

⁶⁷ Tauscher 1994: 181.

⁶⁸ See also the forthcoming article by the present author dealing alone with the question of the position of *A* in the stemma of the *TGS*.

⁶⁹ *A* together with the Tshal pa group omits the *rkyang shad* against Them spangs ma and *P₀* in 14 cases, together with Tshal pa and *P₀* against the Them spangs ma in 8 cases and together with *P₀* against Tshal pa and Them spangs ma in only 4 cases. Tshal pa omits the *rkyang shad* in the same textual unit 10 times against *A* and Them spangs ma, and is joined by *P₀* in 2 cases. However, *A* alone against all other versions omits the *rkyang shad* in 14 cases and exhibits a *rkyang shad* where all other versions have none in 5 cases.

- 12A, n. 9 LST: om. *du* in *d-/ton du byed*.
- 12A, n. 18 AP₁₂: *chu ngus* for *chung ngus* (wrong decomposition of the abridgment *chungus*?).
- 12D, n. 7 ABP₁₂₃: *yid rangs* for *yi rangs*; Q: lacuna of one letter between *yi* and *rangs*.
- 12D, n. 11 JST: *rdzogs so* for *rdzogs s_ho*; N: *rdzogsso*; (ABQLP₁₂₃: རྩོགས་སོ་).

These readings will be discussed and supplemented with more variants (including *A*) in the next section. The specification of the independent status of *A* is closely linked with the question of the originality of its transmission.

2.6 The Relation of the Main Transmissional Groups to Each Other

It now seems that we have four main lines of transmission for *Tib*: *A*, *P₀*, the Tshal pa and the Them spangs ma lines. In order to determine how these main groups are related to each other, we need to take a closer look at the combinations in which these groups share variants. I will not list obviously erroneous variants represented by only one group. In parentheses behind the variant, an evaluation of the reading according to *Ch₁*, *Ch₂*, *Bth* or common sense will be provided whenever possible.

A and Them spangs ma versus *P₀* and Tshal pa:

- (28) – 5B, n. 3 A: *la sngon ma byung ba sngon ma byung ba 'i* for *la sngon ma byung ba 'i* (dittography); LST: *la sngon ma byung ba 'am // *sngon ma byung ba 'i* [*L: /]. (ALST against *Ch₂* and *Bth* (*sngon ma byung ba 'i gtan tshigs kyi rnam pa*, Skt. **apūrvahetvākāra*, appears also in *Ch₂*: 未曾有因相). *Bth*: *rim kyi thog mar rgyu dang*: *rnam pa* could render the same Skt. compound interpreted as a *dvandva* and with **anu-pūrva*^o instead of *a-pūrva*^o.)
- 5C, n. 13 BDJNQP₁₂₃: *gyur la* for *gyur pa*.
 - 6C, n. 15 BJNQP₁₂₃: *gang* for *nang*. (The pāda according to ADLST seems to have more meaning: *mi shes nang na gnas kyang rlom sems med //*. That this is the original understanding is confirmed by *Bth* (*dbus*) and *Ch₂* (於中).)
 - 11B, n. 15 BJNQP₁₂₃S: *bar* for *ba* in *dga' ba byed pa*.
 - 11D, n. 1 BJNQP₁₂₃: *bris* for *bres* in *gser gyi skud pas mig mangs ris su bres par gyur*.
 - 11G, n. 19 BJQP₁₂₃: om. *phra rab kyi rdul* (BJQP₁₂₃ is clearly an *aberratio oculi*).
 - 11I, n. 32 BJNQP₁₂₃: *sngon gyi spyad* for *sngon ni spyad* (BJNQP₁₂₃ less probable; *Bth* also adverbial: *sngon kyang spyad*....)
 - 12A, n. 22 BJNQP₁₂₃: om. *yang*.

A and Tshal pa versus *P₀* and Them spangs ma:

- (29) – 11H, n. 15 P₁₂ST: *dung du yang* for *dung yang*; P₃: *rung du yang*.

A and *P₀* versus Tshal pa and Them spangs ma:

- (30) (–11H, n. 21 BJNQ: *bzhi po 'o* for *bzhi pa 'o*; L: *bzhi 'o*; ST: *bzhi 'o*.)
- 12D, n. 7 ABP₁₂₃: *yid rangs* for *yi rangs*; Q: lacuna of one letter between *yi* and *rangs*.

Combinations of variants represented by a single group against all other three groups (variants are only those not clearly discernible as faulty):

A versus all other three groups:

- (31) – 11C^{ss},^{ww} A: *rab tu thob* for *thob*.
- 11E, n. 1 A: *khyim nas byung ba* for *mngon par byung ba*.
 - 11I, n. 15 AP₁: *de 'i tshe* for *de tshe* (verse).
 - 12A A: ... *gang dag gis / de bzhin gshegs pa 'i snying po 'i chos kyi rnam grangs 'di thos pa dang / lung 'bog pa dang / kha ton du byed pa dang / stond pa de dag chos kyi rnam grangs 'di thos pa dang / lung 'bog pa dang / kha ton byes pa dang / rab tu bshad pa dang / yi ger bris pas tshegs chu ngus de dag la chos kyang mngon sum du gyurd /*
for

... gang dag de bzhin gshegs pa'i snying po'i chos kyi rnam grangs 'di nyan tam / lung nod dam / kha ton byed dam / ston kyang rung chos kyi rnam grangs 'di nyan pa dang / lung nod pa dang / kha ton byed pa dang / rab tu 'chad pa dang / yi ger 'dri ba de dag la tshegs chung ngus chos de dag kyang mngon sum du 'gyur /

- 12D, n. 3 A: om. *de*.
- Throughout the whole text when introducing the verses: *gsungs so* for *bka' stsal to*.
- Throughout the whole text (with one exception): *brgya stong* for *'bum*.
- For the unique colophon of *A* see section 3.3.

*P*₀ versus all other three groups:

- (32)
- 6B, n. 14 P₁₂₃: *ji lta bu* for *ji lta ba*.
 - 6C, n. 14 BP₁₂₃: *na* for *ni*.
 - 7A, n. 32 P₁₂₃: *thum po* for *thum bu* (see *Bth: dam po*).
 - 10D, n. 23 P₁₂₃: *pa'i bsam* for *pa bsam* (verse).
 - 10D, n. 25 P₁₂₃: *pa* for *la*.
 - 11D, n. 11 P₁₂₃: om. *des*.
 - 11D, n. 12 P₁₂₃: *par* for *pa*.
 - 11H, n. 7 P₁₂₃T: om. *pa*. AJ: *ba* for *pa*.
 - 11I, n. 4 P₁₂₃: *pa* for *na*; T: *ma* for *na*.
 - 11I, n. 16 P₁₂₃: *rgyal ba* for *rgyal dbang* (P₁₂₃ against *Bth: rgyal dbang*).
 - 11I (verse), n. 23–25 P₁: *de'i tshe de dag mdo 'di thos //* (also A: *de'i for de; gyur nas*, which is found in P₂₃, was probably the reading of P₀ and omitted by P₁),
P₂: *de'i tshe de dag mdo 'di thos gyur nas /*,
P₃: *de tshe de dag mdo 'di thos gyur nas //*
for *de tshe de dag gis ni mdo 'di thos //*
 - 12B, n. 20 P₁₂₃: *pa bya ba'i* for *pa'i*.
 - 12C, n. 15, 16 P₂₃ *zla nya* for *nyi zla*; P₁: *zla ba nya*. (P₁₂₃ in accordance with *Ch*₂ and *Bth*).

Tshal pa versus all other three groups:

- (33)
- 10D, n. 24 BDNQ: *pa //* for *pa'i //* (verse).
 - 6A, n. 10 ALSTP₁₂₃: om. *na* in *'jig rten na gnas pa*.
 - 6C, n. 11 BDNQ: *ni* for *gi*; P₁: *gis* for *gi*; P₂: *migis* for *mig gi* (BDNQ against *Ch*₂: ... 無漏 最勝佛眼觀; also P₁₂ against *Ch*₂).
 - 6C, n. 17 BDJ: *spang* for *sbyang*; Q: *spang* or *sbang* (?) (BDJ(Q) against *Ch*₂: 淨).
 - 7A, n. 20 BDNQ: *de'i tshe de* for *de'i de*.
 - 10D, n. 24 BDNQ: *pa //* for *pa'i //* (verse).
 - 11A, n. 2 ALSTP₁₃: *bsgrub* for *sgrub*; B: *sgyub*.
 - 11F, n. 3 BDNQ: om. *dang po* (BDNQ against *Bth: de thog mar mngon*).
 - 11I, n. 13 BDNQ: *por* for *po*.
 - 12A, n. 34 BDNQ: *de dag* for *dag*.
 - 12B, n. 16 BNQ: *de* for *nga*; LT: om. *nga* (BNQLT against *Bth: nga*).
 - 12C, n. 7 BNQP₂: *da* for *nga*; J: *nga* or *da* (?) (B(J)NQP₂ against *Bth: rang*).
 - 12C, n. 3 BDNQP₃: *de dag dang* for *de dang*.

Them spangs ma versus all other three groups:

- (34)
- 11C, n. 11 LT: *na* for *du*.
 - 11D, n. 14 LST: *'bum po de dag* for *'bum de dag*; A: *brgya stong de dag*.
 - 11D, n. 18 LST: om. *yang*
 - 10E, n. 6 LST: *zhugs* for *bzhugs*.
 - 11E, n. 11 LST: *la* for *na* in *mchod rten la*.
 - 12A, n. 9 LST: om. *du* in *d-ton du byed*.
 - 12A, n. 29 LST: om. *chos*.
 - 12B, n. 16 LT: om. *nga*; BNQ: *de* for *nga* (BNQLT against *Bth: nga*).

(35)–(37) show the combinations of the three groups for the portions of text missing in *A*. Again, obviously faulty variants of a single group are not provided:

Them spangs ma versus *P*₀ and Tshal pa:

- (35) – 0B, n.1 BDNQP₁₂₃: *thos pa'i dus* for *thos pa dus*.

- 0B, n.7, 8 BJQP₁₂₍₃₎: *bzangs can* for *bzangs tsan dan* (BJQP₁₂₃ against the parallel in 0G).
- 0B, n. 21 BJQP₁₂₃T: *sems can thams* for *sems thams* (BJQP₁₂₃T wrong: “mind (*sems*) of the *arhat*”).
- 0C, n. 5 BQP₃: *chu rlung 'od srung* for *chu bo 'od srung*; JNP₁₂: *klung* for *bo* (Nadikāśyapa, *MVy* 1050: *chu klung 'od srungs*; *Bth*: *chu bo 'od srung*).
- 0G, n. 1,2 LST: om. *du nang* in ... *nyid du nang du yang...*; BJNQP₁₂₃: *kyi nang* for *du nang*.
- 0H, n. 7 BJQP₁₂₃: om. *kyang*.
- 0I, n. 6 LST: *chung ba* for *chu ba*; P₃: *cung*; (LST against *Bth*: *sbu gu* for *chu ba*).
- 0K, n. 8 BJNQP₁₂₃: *sngon* for *sngan*.
- 1B, n.2 DLSTP₃: *po can yin* for *po yin*.
- 1C, n. 28 LST: *nga* for *de*.
- 2A, n. 14 BDJNQP₁₂₃: *kun tu* for *shin tu*.
- 2B, n. 4 BJQP₁₂₃: om. *de*.
- 2C, n. 19 LST: om. *rtag tu* (LST against *Ch*₂: 常).
- 4A, n. 17 BDJNQP₁₂₃: om. *dag*.
- 4A, n. 19 BDJNLP₁₃: *brnan* for *mnan* (also *Bth*: *brnan*): against *Ch*₂: 金寶沈沒臭穢;
P₂: *gnan* for *mnan*; Q: *pa rnan* for *mnan*.
- 5A, n. 18 BDJNQP₁₂₃: om. *ni*.
- 6B, n. 6 DLST: *bsal* for *bsil* (DLST against *Ch*₁₂: 清涼) P₃: *gsil*.
- 7C, n. 3 BDJNQP₁₂₃: *pa 'i* for *par*.
- 8A, n. 16 BDJNQP₁₂₃: *du* for *pa*.
- 8C, n. 16, 17 (irrelevant single variants are not shown):
BDJNQ: *nang na chos nyid mngal gnas 'dra yod mthong //*
P₁₂₃: *nang na chos nyid mngal ba* [P₂: *du* for *ba*] 'dra yod mthong //
LST: *nang na chos nyid mngal 'dra yod par mthong //*
- 9B, n. 7, 8 ST: om. *kyi chos* in *sangs rgyas kyi chos kyis* (*aberratio oculi*; ST is against *Bth*: *saryas^l kyi chos*).
- 10B, n. 3 BJNQP₁₂₃: om. *yang*.

Combination Tshal pa versus *P*₀ and Them spangs ma:

- (36)
- 0K, n. 6 BJNQ: *gang* for *dag*.
 - 0K, n. 13 BJNQ: *khengs* for *khebs* (BJNQ against *Ch*₁: 彌覆, “cover completely”; cf. 0G.7f. and 0J.9).
 - 0K, n. 17 BJNQ: *mdzod* for *mdzes* (BJNQ against *Ch*₁: 莊嚴 and *Ch*₂: 端嚴).
 - 0L, n. 8 BDJNQP₃: *dang ngas bshad* for *dang bshad*.
 - 0M, n. 37 BDJNQ: *snying po can du mthong* for *snying por mthong*.
 - 1A, n. 22 BDJNQ: *ba* for *la*.
 - 1B, n. 3; 5A, n. 10; 5A, n. 16: BDJNQ: *g.yogs* for *yog* (P₂: once *g.yog*; T: once *yogs*).
 - 1C, n. 18 BDJNQ: *par* for *pa*.
 - 1C, n. 22 BDJNP₃S: *to* for *te*.
 - 2A, n. 11 BDJNQ: *na* for *nas*.
 - 2A, n. 23 BDJNQ: *par* for *pas* (BDJNQ against the parallel constructions in 2A.8 and 2A.12f.).
 - 2C, n. 17 BDJNQ: *bas* for *ba* (BDJNQ against *Bth* and the Chinese; see translation).
 - 3A, n. 8 BDJNQ: *nas* for *las* (*Bth*: *las*).
 - 3A, n. 9 BDJNQ: *phyung* (BDJNQ impossible since no agent is given).
 - 3A, n. 11 BDJNQ: *dang* for 'am.
 - 4A, n. 27 BDJNQ: *lo lnga* for *lnga*.
 - 4A, n. 30 BDJNQP₂: *par* for *pa*.
 - 4C, n. 15 BDJNQ: *gis* (BDJNQ, which mark *sentient beings* as the agential knowers of the nature of their defilements, contradict *RGV* I.110).
 - 7A, n. 40 BDJQ: *dum bu 'di yi thum bu* for *dum bu thum bu*; N: *dum bu 'di'i thum bu*.
 - 7B, n. 3 BDJNQ: *rtag tu* for *kun tu*.
 - 8A, n. 6 BDJNQ: *sbrum par* for *sbrum mar*.
 - 8A, n. 11 BDJQP₃: *de 'i* for *de*; N: *da 'i* for *de*.
 - 9A, n. 13, 14 BDJNQ: *gyur pa na* for *gyur nas*.
 - 10C, n. 8 BJNQ: om. *pa* in *bzhi pa 'bum*.

*P*₀ versus Tshal pa and Them spangs ma:

- (37) – 0K, n. 30 BNP₁₂₃: *ltas* for *lhas* (BNP₁₂₃ against *Ch*₂: 天中).
– 1C, n. 27 P₁₂₃: 'di for *de*.
– 2B, n. 2 P₁₂₃T: om. *la* in *thabs la mkhas pas*.
– 4C, n. 6 P₁₂₃: *lhas ni* for *lha yis*.
– 7B, n. 1 P₁₂₃: *pa* for *cing* in 'os *su(s) gyur cing*.
– 7C, n. 14 LP₁₂₃Q: *ni* for *na*.
– 7C, n. 23 P₁₂₃: *thar pa* for *thar byed* (P₁₂₃ faulty; construction needs transitive verb).
– 8B, n. 11 P₁₂₃: *byed cig /* for *byed par* (P₁₂₃ use imperative particle *cig* without the imperative form of *byed pa: byos*).

What conclusions can we draw from the material presented above? Let us first turn to the part of the *TGS* where all four groups are represented ((28)–(34)). There, we have a remarkable disproportion in the variants shared by two groups:

- (a) *A* and Them spangs ma versus *P*₀ and Tshal pa: 8
(b) *A* and Tshal pa versus *P*₀ and Them spangs ma: 1
(c) *A* and *P*₀ versus Tshal pa and Them spangs ma: 1 (and in one other case only accordance between *A* and *P*₀)

The high number of variants in combination (a) suggests that there may be a closer relation between Them spangs ma and *A* on the one side, and *P*₀ and Tshal pa on the other. The reason why there are so few cases in (b) and (c) can only be that both sides of the combination are not represented together. In other words, *A* and Them spangs ma are close, whereas *A*/Tshal pa and *A*/Phug brag have essentially no co-occurring variants, and Tshal pa and Phug brag are close, whereas Tshal pa/*A* and Tshal pa/Them spangs ma have not much in common. We should further inquire which pair of the two in (a) may be “responsible” for the relatively high number, that is, in which cases under (28) the reading is a shared mistake and can be called “unoriginal” when compared with its counterpart.

5B looks like plain dittography in *A* without any parallel in *Bth* or *Ch*₂. *LST* have obviously tried to soften the mistake by adding the particle 'am. If my above hypothesis regarding *LST* is true, neither the editors of *S* (or one of its predecessors) nor the editors of *L* (or one of its predecessors) have altered the passage.

In 6C the reading *nang* is confirmed by *Bth* and *Ch*₂; *BJNQP*₁₂₃ can be said to be the unoriginal reading; the situation in 11G is similar (a clear *aberratio oculi* on the part of *BJNQP*₁₂₃), and probably again in 11I, where the adverbial construction of *sngon* is attested for *Bth*. Nothing can be said about the other variants. As a result, we note that in three of the four cases where it is possible to decide the original reading it is the reading of the pair Tshal pa/Phug brag which is not original.

If we turn to the portion of the text without the testimony of *A*, is there a similarly high ratio of non-original Tshal pa/Phug brag readings? An analysis of the twenty-one variants in (35) yields eight cases in which it is possible to decide upon the originality of the reading. Of them, Tshal pa/Phug brag can be said to be secondary in four cases. In the other four cases the Them spangs ma reading is definitely secondary. The weight of this purely statistical result becomes clear when we see in contrast that in (36) (Tshal pa versus Phug brag/Them spangs ma) Tshal pa is alone faulty in all six verifiable readings, and in the case of the combination Phug brag versus Tshal pa/Them spangs ma (37) Phug brag is secondary for all three verifiable variants. In all of these cases it is thus the single reading which is faulty against the reading shared by the two other groups. This

demonstrates on the one hand the fact that the pairs Phug brag/Them spangs ma and Tshal pa/Them spangs ma are not “love marriages”; most of their common variants are simply due to the erroneous third group, namely Tshal pa or Phug brag. On the other hand, it indicates a close relation between Tshal pa and Phug brag, which share four of eight analyzed unoriginal readings—a fact that thus confirms the result of the analysis of (28)–(34).

Based on the results above, we can now assume two principal groups of transmission, each sharing common variants: *A*/Them spangs ma and Phug brag/Tshal pa. But there are a few cases in which other combinations of the four groups are found. In (29) P_{123} together with *ST* insert *du* after *dung*. Both readings are of course possible. No definite statement about the original formulation can be made.⁷⁰ In (30) the first variant suggests that the original reading was *bzhi pa'o* attested by *A* and Phug brag. In the Tshal pa tradition this *pa* turned into *po*, whilst in Them spangs ma *pa* was completely dropped. Both traditions thus adapted the cardinal number to the classical standard in accordance with their understanding of the passage. This could have happened independently of each other. In the second case of (30) we find *yi rangs* instead of *yid rangs*. I suggest a similar process: the original *yid rangs* became uncommon in classical times, and the editors of *LST* and those of Tshal pa both adapted it to the new standard. The Peking line still reflects this transformation, in that it has preserved the lacuna of the erased *-d* and, in *B*, the complete *yid*.

However, there is one combination among the readings in the following sections (31)–(37) which calls for a closer analysis. It is the variant (38)

12C, n. 15, 16 P_{23} *zla nya* for *nyi zla*; P_1 : *zla ba nya* (verse)

in (32).

The corresponding passages in *Ch*₂ (滿月) and *Bth* (*zla ba nya*) are both in accordance with P_{123} . There can be no doubt that in this case only Phug brag has preserved the original wording *zla nya* for *(*pari-*)*pūrṇacandra*, whereas all other groups show the secondary variant *nyi zla*. The term *nyi zla*, Skt. *candrasūrya*, is, as a matter of fact, much more appealing as an epithet for somebody who preserves the *TGS* as described in the text. This fact becomes evident when studying the index of, for example, the *SP*, where a number of compounds which include the term *candrasūrya* (Tib. *nyi zla*) are found: *Candrasūryapradīpa*, *Candrasūryapradīparāja*, *candrasūryaprabhā* and *Candrasūryavimalaprabhāsaśrī*. The term (*Pari-*)*Pūrṇacandra*, on the contrary, appears only once in the whole *SP*. It is the name of a bodhisattva, and rendered in Tibetan as *Zla gang*. The situation is similar for the *Lalitavistara*, where the Tibetan version in the Derge Kanjur attests the combination *nyi zla* twenty-seven times, while *zla nya* or *zla gang* is found only once throughout the text.

If we are dealing with a “closed”⁷¹ tradition, that is, if there are no cross-contaminations between the main Kanjur lines, we would have to argue that the widespread usage of the compound *nyi zla* must have been what led the editors of *A*/Them spangs ma and the Tshal pa line to change—independently of each

⁷⁰ Note that Pagel (1999: 199f.), for the *Bodhisattvapīṭaka*, mentions several cases where *L* shares readings with *A* and Tshal pa against *ST*.

⁷¹ I use the terms “closed” and “open” recension in the sense introduced by Giorgio Pasquali. Closed recensions suggest that readings move only vertically, from the master copy to the copy itself, whereas in an open recension readings can also circulate horizontally, leading to contamination.

other—the original *zla nya* (including reversing the word order) to *nyi zla*, the form abundantly attested in the *SP* (see above). *P₀*, however, has preserved the original uncommon wording, and deserves respect as a more conservative line of transmission, one which, according to the results of my analysis above, introduces more mistakes because of inattentive copying than such redactional intervention as the alteration of *zla nya* to *nyi zla* in the other Kanjurs. However, it is clear that one can by no means rule out cross-contamination even at an early stage of transmission.⁷² The more convincing explanation of the *nyi zla* variant shared by three groups which generally share no common variants in the *TGS*, rather, is to assume contamination. The assumption of such a contaminative process in an open tradition can account for why only Phug brag has preserved the original reading *zla nya*. We will come back to this question after dealing with the recensional single variants of *A* quoted under (31). Only such an evaluation can help to shed light on the question whether *A*'s single variants can be treated as original.

In 11C^{ss} and ^{ww}, *A* reads *rab tu thob* instead of *thob* in the context of the attainment of the *anutpattikadharmakṣānti* and the attainment of efficacious formulas (*dhāraṇī*). Usually forms or nominalizations of the verb *pratilabhate* are used in this context.⁷³ Though *rab tu* cannot completely be objected to, the far more usual rendering of the prefix *prati* in Tibetan is *yongs su*. If we assume that in the Sanskrit of the passage in the *TGS* we originally had a form of *pratilabhate*, as attested in, for example, the *Saddharmapuṇḍarīka*, we are faced with the question how the reading *rab tu thob* came into existence. Not irrelevant is Braarvig's (1993a: ix) noting the reading *rab tu thob* instead of *thob* for the Stog and the Tokyo manuscripts of the *Akṣayamatīnirdeśasūtra*. These are the manuscripts closest to the Dunhuang version.

In a unique case (11E, n. 1) *A* reads *khyim nas byung ba* instead of *mngon par byung ba* in all other canonical versions. *Bth* simply has *byung ba*. The passage describes a bodhisattva from whose body rays of light are emitted from the time he “had been born, set out for ascetic life (*abhiniṣkramaṇa*) and [finally] completely awakened to buddhahood.” Though the translation of *abhiniṣkramaṇa* in *A* is clear enough, the usual rendering of *abhiniṣkramaṇa* in Tibetan translation literature is doubtlessly *mngon par byung ba*, the reading attested in the canonical versions.⁷⁴ I have no parallels of this rendering (*khyim nas byung ba*) in other old texts.

A major variant is found in passage 12A.⁷⁵ The Buddha explains to Vajramati that “sons and daughters of good family who are restricted by obstacles [caused by their] deeds (*karmāvaraṇa*) will become purified” owing to the merit attained from propagating the sūtra. Apart from the divergent translations of individual words, *A* offers an overall different understanding, in that it ends the

⁷² For a similar case, see Braarvig's edition of the *Bodhisattvacaryānirdeśa* (1994), where he assumes the two Phug brag versions to be “direct copies of the Old Narthang, notwithstanding all errors” (p. 139). The main reason for his assumption is the correct reading *rab* instead of the *rang* of all other versions in § 15, n. 24. In this case it can be stated with almost one hundred percent certainty that the alteration of *rab* to *rang* did not take place independently in the other two main lines of transmission.

⁷³ See e.g. *SP* 327.8: ... *koṭīnayutaśatasahasraparivartāyā dhāraṇyāḥ pratilambho 'bhūt /*.

⁷⁴ See e.g. *SP₁* s.v. *abhiniṣ-√kram*.

⁷⁵ This variant is discussed in detail in my forthcoming publication.

second unit of the enumeration of activities with ... *pas*, indicating that this enumeration contains the means by which to reach the desired result. One problematic feature in *A* is that *gang dag gis*, functioning as a relative pronoun, seems to be taken up twice by *de dag* and by *de dag la*. If we decide that the relative clause refers to *de dag la* as it does in *Tib*, *de dag* cannot be included in the structure of the sentence. One possible translation of *A* is:

Vajramati, for those sons and daughters of good family restricted by obstacles [caused by their] deeds who listen to this Dharma discourse [called] *Tathāgatagarbha* and expose, recite or teach [it]—by virtue of listening to this Dharma discourse and exposing, reciting, explaining and copying [it, it will happen that they] will easily see the Dharma before their eyes [and they will] become purified [from] the obstacles [caused by their] deeds.

A is more explicit in stating that the activities performed are the means of getting rid of the obstacles—an idea not openly expressed in *Tib*. Further, the particle *de dag*, redundant in *A*, in *Tib* refers to *chos*. In *Bth*, *de dag (gis)* is found at the end of the first enumeration (and not, as in *Tib*, after *chos*), so that, grammatically, there is no relative clause. *De dag la* does not appear. However, *bris nas* should most probably be emended to *bris pas*, since it would be grammatically impossible to combine the former with the nominalized stems connected by *dang* before. *Bth* offers no indication that the employment of the particle *'am*, as seen in *Tib*, might be based on a Sanskrit original. It would be hard to explain why a reviser should alter the use of *dang* and *'am* in favor of the solution seen in *A* (*dang* throughout). Regarding *Ch₂*, Amoghavajra, by using the particle *you* 由 (syntactically governing the sentence up to ... 書寫經卷), marks the second enumeration clearly as the necessary condition for the result mentioned at the end of the sentence: "... *in consequence* of listening ..." and thus seems to support the reading found in *A*. As for originality, it is hardly possible to settle with certainty the question whether *Tib* in this passage is a revised version derived from the text as found in *A*, though there is some evidence which seems to suggest this. The explicit characterization of the activities as the means in *A*—which is also found in the Chinese translation and (with the emendation of *nas* to *pas*) in *Bth*—would favor such an explanation. The redactors of *Tib* would afterwards have changed the position of the irritating *de dag* (still found in *A*), combining it with *chos*. *Bth* for its part agrees with *A* in uniformly using the particle *dang* in both enumerations instead of *'am*, which is found in *Tib*.

Throughout the whole text (with one exception) *A* has *brgya stong* instead of the *'bum* of the canonical versions. The Sanskrit in all these cases was most probably *śatasahasra*. *brGya stong* sticks literally to the Sanskrit. In §19 of the *sGra sbyor bam po gnyis pa* it is laid down that in order to write "good" Tibetan, numbers should be translated in a Tibetan way.⁷⁶ *brGya stong* for *'bum* is attested for *Bth* throughout the text, and in Braarvig 1993a: vi for the Stog and the Tokyo manuscripts (which are the manuscripts closest to the Dunhuang material).

When introducing the verses spoken by the Buddha, *A* continually employs *gsungs so* instead of *bka' stsal to*. Here again, in all these cases *Bth* reads *gsungs so* too.

As indicated above, an evaluation of these single variants found in the Tabo fragments is vital for establishing a hypothetical stemma of *Tib*. Basically, there

⁷⁶ See Simonsson 1957: 254f.

are two ways to explain the unique readings of *A*. They could (a) represent the original phrases—ideally, chosen by the translation team itself or otherwise mirroring a very old stage of transmission—whereas all other versions must have undergone a process of revision in these cases. Or they could (b) result from later intervention by a reviser based on his own judgment or on the evidence of available Sanskrit manuscripts. That Sanskrit manuscripts were used to revise Tibetan translations in Tabo is known to be true of the *Pañcakrama*.⁷⁷ Harrison in his analysis of several Tabo fragments of the *mdo mang* section does not seem to exclude this possibility either.⁷⁸ However, I cannot imagine that a later editor would have had any good reason to alter the readings 'bum, bka' stsal to, and mngon par byung ba of *Tib* into the much less commonly used phrases found in *A*. In addition, what would have led him to replace *thob* rendering a form of *pratīlabhate* with *rab tu thob*? If he indeed had had access to a Sanskrit version of the *TGS*, should we not rather expect that he would have supplied the particle *yongs su* as the “regular” counterpart to *prati*? Finally, why should he have left *A*'s dittography shared with Them spangs ma in 5B (28) uncorrected? If, on the other hand, we assume that a reviser changed the text in *A* without resorting to a Sanskrit manuscript, how could he have known about the construction of the passage of major variants in 12A which, after all, seem to be confirmed by *Bth* and the Chinese?⁷⁹ I think that the evidence should lead us to assume that the single readings of *A* discussed above in fact document an older stage of transmission which escaped later revisional intervention. That *A* too suffered alteration, however, is clear from the mistake *nyi zla* instead of *zla nya* (32), which *A* shares with the Them spangs ma and Tshal pa block prints and manuscripts.

Let us now come back to the question where we can reckon with major contaminations without which, as seen above, it seems impossible to establish an appropriate stemma for *Tib*. There are basically two alternatives how major contaminations could have taken place:

- a. Tshal pa and Phug brag derive from a common hyparchetype different from the hyparchetype of *A*/Them spangs ma. This explains the common variants between Tshal pa and Phug brag. Later, the common ancestor of *A* and the Them spangs ma line was contaminated by a manuscript of which the Tshal pa manuscript is a descendant. This led to the introduction of readings found in the Tshal pa line into the *A*/Them spangs ma tradition.⁸⁰ Phug brag remained uninfluenced by these Tshal pa readings, and so preserved parts of the original text such as *zla nya* discussed above. For editors within the

⁷⁷ See Tomabechei 1999: 88.

⁷⁸ See Harrison 1999: 53.

⁷⁹ For a discussion and evaluation of the colophon of *A* see section 3.3.

⁸⁰ Also the reverse order is thinkable, i.e., a contamination of the Tshal pa tradition by a manuscript leading to the Them spangs ma manuscript. The model suggested in the main text sees the unoriginal *nyi zla* variant as having originated in one of the manuscripts before the Tshal pa manuscript, after the Phug brag branch had already become established. This apparently fitting, though unoriginal, variant was “exported” to Them spangs ma/*A* by contamination. The omission of *phra rab kyi rdul* ((28): 11G, n. 19), shared by Phug brag and Tshal pa, on the other hand, was not adopted by the editors of the archetype of Them spangs ma/*A* because it could easily be recognized as a mistake on the basis of their own manuscripts. The model with the reverse order, on the other hand, would imply that the *nyi zla* variant appeared first in a manuscript leading to the predecessor of *A* and the Them spangs ma, and from there was introduced into a pre-Tshal pa manuscript.

A/Them spangs ma tradition who were confronted with the choice between *zla nya* and *nyi zla*, the common *nyi zla* was the variant they preferred. A second major contamination has to be assumed in order to explain why *A* has preserved many old readings, whereas the Them spangs ma representatives, while sharing the same predecessor with *A*, do not. I suppose that at a time when *A* or its predecessor(s) had already become “separated” from the pre–Them spangs ma line another manuscript of the Tshal pa line or a pre–Tshal pa manuscript was used in editorial activities that eventually led to establishing the Them spangs ma copy (and thus was able to contaminate that transmission in a second “thrust”). The corresponding stemma is shown as “Alternative 1” (in 2.7).

- b. The second alternative is based on the assumption that Phug brag forms an independent line of transmission, as shown in the stemma of “Alternative 2” (of 2.7). Thus it preserved original readings which have been altered in the second line of transmission, to which all other collated versions of *Tib* would then have to belong. The readings shared with the Tshal pa line, however, would be the result of Phug brag’s contamination with a manuscript of the Tshal pa line.⁸¹ Considering the numerous common readings between Phug brag and Tshal pa among which, as documented above, a high percentage of unoriginal variants can be found, this contamination must have been rather strong. It is difficult to answer, under this second alternative (b.), why, in view of such a strong contamination, the editors of the Phug brag archetype decided to preserve their reading *zla nya* against the more common reading *nyi zla* contained in the contaminator, and why, on the other hand, they opted for the unjustified omission of *phra rab kyi rdul* in 11G. Under this alternative, too, the (pre–)Them spangs ma line must have been contaminated by a manuscript of the Tshal pa or pre–Tshal pa line. Only then can the fact that *A* has preserved original readings found in no other manuscript or block print be reasonably accounted for.

There are some other variants which are in need of explanation.

(39) BQ: *brjid chen po dang* for *brjid dang*.

Only *BQ* seem to have preserved the reading corresponding to *Ch*₂ (大威德) for Skt. *mahaujas* (*gzi brjid chen po*). But there are several reasons which make such an interpretation hardly allowable. First of all, it is very unlikely that all the other three groups (*A*, Them spangs ma and ’Phying ba sTag rtse) have omitted *chen po* independently of each other. Secondly, *Bth* also only reads *mdangs*, another equivalent for *ojas* according to the *MVy* (6409). Finally, *Ch*₂, in this passage, clearly seeks to preserve a four-syllable rhythm (獲大威德, 色相具足, 具念, 具慧, 具行, 具智, 具於辯才。), which may have been the reason why 大 was added to 威德.

(40) 11I, n. 20 ABJNQLSTP₁₂: *bstan las* for *bstan la* (verse).

The corresponding prose *bcom ldan ’das de’i bstan pa la* in 11H.10: “under the rule of that exalted one” documents that the *pāda* should be read according to *P*₃:

⁸¹ Nothing can be said about when the contamination took place. The variants shared by Tshal pa and Phug brag in the *TGS* do not show any prevalence on the part of one of the two branches of Tshal pa, viz., the ’Phying ba sTag rtse or the Peking line, so that either of them could have contaminated Phug brag.

rgyal de'i bstan la. This is also in accordance with *Ch*₂ which shows the same understanding of the verse (當彼佛時), and in the prose (彼佛世時). It is, of course, possible that only *P*₃ has preserved the original *la*, especially as the conservative character of Phug brag in (38) has already been demonstrated. However, an alternative is to assume that *P*₃ has secondarily adopted the reading *la* according to the parallel in the prose portion, only after the mistake in the early transmission was made of associating *bstan la* with the following *mdo sde 'di* and hence of “emending” *la* to *las*.

With this variant we enter the last category where a reading shared by *all* versions is suspected of contradicting the original wording of the text.

- (41) – 5A, n. 25 ABDJNQP₁₂₃: *snying po*; LST: *snying po'i*. Though the context makes it clear that the Indian original must have read *jñāna* (*ye shes*; see the note in the translation), all versions of *Tib* have *snying po('i)* (Skt. *garbha*). We cannot be sure if *garbha* was already part of the Indian manuscript on which *Tib* was based or if we are confronted with a mistake, or even a deliberate alteration, on the part of the translators.)
- 9A, n. 27, 28 BDNQLSTP₁: *phyir rim* for *phyi rol*; P₂₃: *phyi rim*, see *Bth*: *phyirol*.
- 10E, n. 2: All versions: *brgya*; probably originally *brgyan*.

In 5A we have no reason to assume that the Tibetan transmission is guilty of the apparently wrong reading, thus rendering the passage irrelevant for an analysis of the relation among the Tibetan versions, but in 9A the graphical similarity between *rol* and *rim* is striking, and the assumption that the mistake is due to a very early mistake in the transmission of *Tib* is most plausible. The emendation to *phyi rol* is supported by the frequent occurrences of the term in the last simile (9A.5, 9B.2, 9B.10, 9.1, 9.3) and by *Bth*, which reads *phyirol*. Concerning the content of the simile itself, it is clear that the reading (*phyir*) *rim gyi(s)* (“gradually”) would conflict with the following passage, which states that the figures become clean “in that moment.”

I am not sure whether *brgyan* was the original reading in 10E against *brgya* of all attested versions of *Tib*. The Chinese versions do not mention “hundred”; *Bth*, too, reads *brgyan*. For the consequences of such an emendation for one’s understanding of the passage, see the note in my translation. However, the change from *brgyan* to *brgya* could be explained as a mistake which was clearly part of the Tibetan transmission. We find further the following unique readings in *Tib*:

- (42) – The sequence of the pādas within a verse is changed and arranged according to the principle that the governing verb is usually placed at the end of the section governed. Pādas which contain relative clauses or other specifying elements are placed before the element specified. On the one hand, this leads to a reduced scope of interpretative ambiguity and follows basic rules of Tibetan grammar. On the other hand, the idea expressed in the original obviously became distorted In some instances:
- In 3.3 the main verb *ston to* and its object *chos* are shifted from pāda c to the end of pāda d. The particle of finality *phyir* right before *chos* was in the process, as a part of the second half of the pāda, also moved to d. The last pāda, stating that living beings quickly awake to buddhahood, thus becomes part of the finality clause with *phyir*, which it was not in the original, as documented by *Bth* and *Ch*₂.
 - Regarding 10.2/10.3, see my comment in the translation.
- At the end of 1A *Tib* reads *yang dag pa nyid du*, **samyaktve*. That the original wording must have been a form of *parisuddha* is attested to by *Bth* (*yongsu dag par*) and *Ch*₂ (清淨). The transformation from *yongsu dag pa* to *yang dag pa* can easily be explained as a result of the graphical similarity between *yang* and *yongsu*, but the addition of *nyid* is clearly a recensional element of the Tibetan translators/editors.

- In 1.2d the Skt. could have been *saṃbhavati*. A Tibetan equivalent for this is found in *Bth*: *kun du 'byung*. *Tib*, however, has only 'gyur. *Kun tu* appears before, separated from it by some syllables, and has to be integrated differently into the sentence. I assume that an original reading *kun tu 'byung* was turned erroneously into *kun tu 'gyur* (both are often *variae lectiones* for each other). Then, in a redactional step that bypassed the Sanskrit, the uncommon *kun tu 'gyur* was separated into *kun tu* and 'gyur.
- In 8B.4 only *Tib* features *rīgs* for Skt. *gotra* or *kula*. The other versions of *TGS*₂ and the quotation in the *RGVV* have *dhātu* (see the note in the translation). Here the reason is probably an underlying faulty Indian manuscript (*gotra* and *dhātu* are metrically equivalent), or an either deliberate or accidental alteration by the translators of *Tib*.

2.7 Possible Stemmas of *Tib*

It is evident that Tshal pa and Phug brag share an intermediary copy or that one of the two must have been subject to contamination by the other, given the fact that many of their shared readings are not original. But in the case of *A* and Them spangs ma it is virtually just once that a reading shared only by both can be said not to be original, namely the variant 5B, n. 3 (28). Other readings in (28) are mistakes shared by Tshal pa and Phug brag (3 cases) and thus do not bear on the relation between *A* and Them spangs ma, or are readings of a rather trivial nature (*pa* versus *la*, *ba* versus *bar*, *bres* versus *bris*, *yang* versus omission of *yang*). Variant 5B n. 3 is, no doubt, a characteristic one and cannot be downplayed as mere coincidence. In fact, if this variant did not exist, I would be reluctant to call *A* and the Them spangs ma descendants of a common intermediary copy.

As mentioned above, a crucial point in reconstructing the stemma is precisely the evaluation of this variant 5B n. 3. I have assumed that the dittography crept into the hyparchetype of *A* and Them spangs ma. The two proposed stemmas are based on this supposition. Alternatively, the dittography could have been part of an earlier transmission before *A* became separated from Tshal pa and Them spangs ma. *A* would then not necessarily derive from the same hyparchetype as Them spangs ma, and stemmatic relations could again be arranged differently.⁸²

In the stemmas on the next pages, I will try to summarize the results of the analysis above. As has become clear, we are dealing with highly hypothetical configurations. This is due to, generally, our imperfect knowledge of how editors and compilers of new manuscripts worked and what degree of horizontal transmission we need to assume. For the *TGS* in particular, the variant situation is rather restricted, since we are dealing with a relatively homogeneous transmission with mostly transmissional variants. The stemmas are therefore tentative, and it is quite possible, if other old *Tib* material appears, that they may have to be readjusted. The sūtra is too short, and so does not allow for definite conclusions as to the stemmatic structure in all instances. For the sake of clarity, I have decided to give two alternative stemmas, of which, based on the analysis of the variants, Alternative 1 is slightly more likely to conform to the actual development. The two alternatives vary in the relation shown between Phug brag and Tshal pa.

⁸² The assumption that an easily committed mistake shared by certain lines of transmission does not mean that the lines in question also share the same hyparchetype but that the mistake could be a remnant of an earlier transmissional state which was not emended in the lines in question violates, however, the classical rules of stemmatological reconstruction and would render the situation hopeless. I therefore refrain from suggesting possible stemmas for such a scenario.

Accordingly, the process of contamination, which surely must have already been taking place in that early phase, is indicated differently. Again depending on the alternative basic structure, the position of the Old Narthang manuscript of the *TGS* may be that of the hyparchetype of Phug brag and Tshal pa (Alternative 1)—a possibility which has hitherto been ruled out in almost all text-critical studies.⁸³ In neither of the alternatives could Them spangs ma directly derive from the Old Narthang manuscript, given that *A* is in fact of earlier origin than the beginning of the fourteenth century, the period when the Old Narthang collection is said to have come into existence.⁸⁴ The exact date of *A*, however, cannot be known with certainty, but it is to be hoped that further progress in the field of codicology⁸⁵ will allow for a more detailed periodization of Kanjur material. Concerning the recensitional variants in *A*, they may in fact be of archaic origin, and so reflect the original wording of the Tibetan translation.

Other, more significant variants are definitely needed to prove that *N* descends directly from the 'Phying ba sTag rtse and not from Lithang. Still open, of course, is the question whether *B* is based on the Yongle or the Wanli block print.

Finally, something should be said about the high number of contaminations underlying my hypothetical stemmas. As a rule, I have tried to apply the classical text-critical methods associated with scholars like Karl Lachmann or his twentieth-century successor Paul Maas, wherever possible. These scholars had mainly non-contaminated traditions in mind when they formulated their basic tools of analysis. Their methods alone, however, in the case of the *TGS*, obviously cannot lead to a satisfactory explanation of the variants. Transmissional reality may in many regards have been even more complex than my purely hypothetical stemmas can display. Contaminations seem to be an integral part of this reality, and this apparently applies to the history of transmission of *Tib* from earliest times on. At least for the history of the canonical translation of the *TGS*, it is now clear that we have an utterly open transmission before us. It cannot be excluded that the validity of this result may be upheld by further Kanjur studies in the future.⁸⁶

⁸³ Harrison mentions the possibility that Phug brag manuscripts could be based on one of the two “edited versions of the Old Snar thang,” i.e., Tshal pa and Them spangs ma, copies of which are known to have been distributed throughout Tibet (1994: 308).

⁸⁴ This does not rule out that Them spangs ma may have undergone contamination by Old Narthang—a realistic possibility under Alternative 1.

⁸⁵ See Scherrer-Schaub 1999b.

⁸⁶ For the Greek and Roman manuscript traditions, Pasquali has “demonstrated that contaminated traditions are more the norm than the exception” (Tarrant 1995: 109).

3 Characteristics of the Textual Witnesses of *Tib*

3.1 Archaic Features

In the following I list the archaic features of the editions of *Tib*, though I am not sure that all of them can strictly be called so. They may just reflect preferences of a copyist, regional characteristics or peculiarities of a certain (but not necessarily ancient) period. This field of research deserves systematic elaboration in the future:⁸⁷

a. The syllable-forming genitive particle *yi* after syllables ending in vowels appears in several cases as *'i* in the verses:

*P*₃: 19 times; *P*₁*P*₂: 17 times; *B*: 9 times; *A*, *L*: 4 times; *S*: 2 times;

J, *T*: once; *Q*: *yi* compressed, most probably altered from *'i*: 9 times.

Simonsson characterizes this feature as archaic, and states that it is especially common in the old translation of the *SP* (1957: 22).

b. The complete omission of the genitive particle is also said to be characteristic of the archaic style (Panglung 1994: 172). The particle is omitted in

*P*₁, *P*₂: 17 times; *P*₃: 12 times; *L*: 7 times; *T*: 6 times; *J*: 2 times;

ABJNQS: once.

c. Reversed *gi gu*: Besides *A* only 2 times in *J*.

d. The *mtha' rten 'a* (*mdo'*, *'dra' dpe'*, *g.yo'*): *A*: 8 times; *P*₃: 5 times; *B*: 2 times;

*JP*₁*P*₂: once.

e. *sTso*gs for *sog*s and *bstsal* for *bsal*: *P*₁*P*₂: 5 times; *A*: once.

f. *Ci nas* for *ji nas*: *LST*: once.

g. *bCu* instead of *cu* after *drug* or *sum*: *JP*₁₂₃: 3 times; *Q*: 3 times lacuna of one letter.

h. *Shes* instead of *zhes* after syllables ending in *-s*:

LT: 8 times; *P*₁*P*₂*S*: 7 times; *BJ*: 6 times; *Q*: 5 times; *A*: 4 times;

*P*₃: 2 times; *N*: once.⁸⁸

i. *Du* instead of *tu* after *kun*, *shin* and *rol*: *J*: 14 times; *Q*: 2 times; *BLS*: once.

j. *Du* instead of *tu* after syllables ending in *-g*: *P*₃: 6 times; *L*: once.

k. The spelling *sngan cad* instead of *sngan chad*: *ST*: once.

l. The spelling *gzer* instead of *zer*: *P*₁: 15 times; *A*: 14 times; *P*₂: 13 times;

S: 4 times; *L*: 2 times.

m. Among the few transliterations a long vowel is usually not marked by *P*₁₂₍₃₎, *L* or *A* (and in some cases by *NST*). *P*₃ seems to have been checked and corrected after copying. *O'u* for *au* appears twice in *LSTP*₁₂₃.⁸⁹

*P*₁, *P*₂ and—though it shows traces of a standardizing revision—*P*₃ contain especially abundant traits which are known to be archaic. The figures for *A* are misleading because it covers only 40 percent of the sūtra and happens not to provide testimony for most of the verse sections. This diminishes, in particular, the number of cases of *A* among *a.*, *e.* and *g.* However, the paucity of omissions of the genitive particle (*b.*) and the non-existence of the forms *kun du* and *shin du* (*i.*) in *A* are surprising. I am rather sceptical that the forms *kun du* and *shin du*

⁸⁷ I shall not repeat the archaic features of *A* described in section C.1. There, in fn. 2, references to some important previous studies of archaic features are provided.

⁸⁸ According to the *Tshig mdzod* the modern standard is *zhes* after syllables ending in *-s* (s.v. *zhes*).

⁸⁹ See Skilling (1994: lii).

represent an archaic spelling. It is quite possible that both forms, namely *du* and *tu*, were used far into the eighteenth century, when *tu* became the standard. In *J* it may well have been the individual taste of the copyist or a local dialect that led to the preference for *kun du* and *shin du*.

D, however, exemplifies modern standard orthography in every respect, followed by *N*, where the features listed above are very rare. By contrast, non-standardized elements are frequent in *S*—which documents the scribe’s high degree of fidelity towards his master copy.

It is, of course, true that a large number of ancient features in a text does not necessarily guarantee that the text itself has been transmitted faithfully. An early redactor could have easily “emended” the wording significantly to suit his ideas of what the Buddha’s word should be, while at the same time leaving the orthography untouched. It is a well-known fact in the realm of textual criticism that the manuscript orthographically revised to the latest standard can nevertheless be the document with the highest degree of fidelity to the original wording. The *TGS* is one of the cases where the stemma does not correspond to the level of orthographic standardization in all regards. *A* is definitely a very important piece of testimony for the oldest stage of transmission. For *P*₁₂₃ the situation is different: together with (or contaminated by?) Tshal pa, they underwent heavy revision and further introduced a number of mistakes on their own. The Phug brag versions nevertheless display the most archaic features alongside *A*. This persistent tendency towards preservation, once the major revision was completed, has already been noted in regard to the variant 12C, n. 15, 16 (see (38)), where *P*₁₂₃ has preserved the correct reading in the face of all other versions, including *A*.

The representatives of the Them spangs ma line also exhibit a moderate number of archaic features. This corresponds to their position within the stemma as versions which have undergone a less intensive revision than the Tshal pa manuscripts and prints.

3.2 Irregular Verbal Forms

Current knowledge of the ancient Tibetan verb system is still far from perfect. Many of my attempts to explain the irregularities found in the texts must therefore remain hypothetical. Verbal irregularities include:⁹⁰

- *bKris* instead of *dkris*: The perfect form of the verb *dkri ba* is several times spelled *bkris* (*B*: 7; *P*₂: 5; *P*₁: 2; *LNQP*₃: 1). In view of the verb pair *dkri* (transitive; “to wind, to wrap”) – *’khri* (intransitive), the form *bkris* could be old. The prefix *d-* in *d-kri* could be explained as the prefix of the present form. Alternatively, the spelling *bkris* could be an erroneous adoption of the common prefix *b-* in the perfect form.
- *bZag* (*BQ* in 9A, n. 8) instead of *zags*: *Zags* is the perfect form of the verb *’dzag pa*, “to drop, to drip”. *bZag* looks like a transitive perfect form from *’dzag*. No other occurrences of this form are known to me.
- In 7A, n. 28 and ^{mm} the forms *’goms* and (*AP*_{12Q}:) *bgoms* appear twice. The verb *’gom pa* with the perfect form *bgoms* is noted in the *Tshig mdzod* as meaning “to pass over, to go by taking a step downwards” (*steng nas gom pa brgyab ste*

⁹⁰ I have only quoted verb forms which cannot easily be explained as mistakes caused by a careless copyist.

ba'am 'gro ba /). This meaning fits the context of the section. However, a perfect form *bgoms* from *'goms* in the present is uncommon, *'g-* at the beginning of the present form turning normally into *bk-* in the perfect form. *Jä* notes the verb *bgom pa*, “to walk, to step,” which I take as a denominative formation from *gom pa* (“a pace, step”). The form *bgoms* would thus be the regular perfect form of the verb *bgom pa*. Should we then assume a secondary form *'gom/'goms* supplementing *b-gom/b-goms*?

- *bsGo* in 4B and 7A should be the “future” form of the verb *sgo ba*. The *RGV* has present optative forms in the parallel verses. Tibetan could render an optative in Sanskrit with *bsgo*, the so-called “future” form. *bsGo* could, however, also be the present form generally applied at the end of the similes. We may thus assume that *sgo*, the form under which the verb is usually given in dictionaries, is just a secondary spelling or an abstraction. *bsGo* can also be found as the perfect form of *sgo ba* in several glossaries and dictionaries (for references see my note to 4B in the translation).
- *bsKyed* instead of *skyed*: In 8C, n. 25 the imperative form of the verb *skyed pa*, “to generate,” is spelled *bskyed* in *LST*. I am not aware of any historical imperative form with the prefix *b-* and so tend to regard this form as a misspelling.
- In 9A n.29, 9B ^{cc}, 9C ^m and in 9.4 the verb *'gogs pa* (in *L* and *J* once *'gog pa*) or its perfect form *bkogs* (*DJN*: once *bskogs*; *P*₃: once *bgogs*) appears. *'Gogs* could be a variant spelling of *'gog* (perfect form: *bkog*), for which *Jä* gives the meaning “to tear away, to peel...” In the *TGS* *'gogs* must have the meaning “to hack off [the outer layer of clay].” It can therefore hardly correspond to *Jä*: *'gogs pa*, “another form for *'gegs pa*, to prevent, to avert...” *bGogs* of *P*₃ can only be a mistake (see the discussion of *bgoms* above), but the form *bskogs* of *DJN* seems to derive from another verb: *Jä* gives the meaning “to splinter off” for the verb *kog pa* (unlikely) for which he also mentions a secondary form *skog pa*. *bsKogs* could thus well be the perfect form of *skog*.
- Besides the regular *thob pa*, “to attain,” there appear the forms *'thob* (*LN*) and *mthob* (*S*) in 5C, n. 14. The form *'thob* may be an adaptation to the verb classes which have the *'a sngon 'jug* only in the present form.
- In 4B and 4C all versions feature the verbal form *non pa*, “to cover, to suppress.” In 4A, n. 19, on the other hand, besides the faulty *brnan* (against *Ch*₂ but with *Bth*), *ST* read *mnan* and *P*₂ reads *gnan*. Assuming a regular present form *gnon pa* with its perfect form *mnan(d)*, the form *non(d)* in 4B and 4C could be an old perfect form possibly derived from the same form *non(d)* used as an imperative. *gNan(d)* (*P*₂), on the other hand, is probably a secondary formation of the perfect form from a time when the *g-* of *gnon* was no longer thought of as a prefix, but as part of the verb stem.
- The verb *g.yogs*, “to cover,” appears 7 times throughout the sūtra in syntactically similar constructions (1B, n.3; 5A, n. 10; 5A, n. 16; 9A ^k; 9.1; 9.2; 9.3). In none of these cases do we have the testimony of *A*. In the first three instances *LSTP*₁₂₃ read *yog* instead; thrice we find the form *g.yog* (*P*₁: twice; *P*₂: once); *T* reads *yogs* in 1B, n. 3; *Bth* displays the two forms *yog* and *g.yog*. The fact that Phug brag sides with Them spangs ma is in most cases the result of *BDJNQ* bearing a reading of secondary origin. This would mean that originally the verb had the form *yog* and was only in a later revisional step in some cases altered to *g.yogs*. Then in another revision, probably the one which

imprinted the characteristics of the Tshal pa versions on them, all other cases of *yog* which had remained unchanged, such as those in chapter 9, were also adapted to the form *g.yogs*.⁹¹ The reason why an alteration from *yog* to *g.yogs* was felt necessary may have been the following: the originally intransitive verb *yog* (perfect form: *yogs*?) was now judged to have transitive character, and accordingly made transitive by adding *g-*.

- Confusion between the future (*gzung*) and the perfect form (*bzung*) of *'dzin ba*, “to grasp,” in several cases; for the verb *'jog pa* (“to place”) this is the case in 7C, n. 21 (*BQ*: *gzhag* for *bzhag*, perfect form) and in 10D, n. 6, where only *P₁₂₃* read *bzhag* instead of *gzhag*. I am not sure which of the two readings should be given preference in the latter case.
- *bSad* instead of *gsad* (8B, n. 6): the future form of the verb *gsod pa*, “to kill, to extinguish,” is spelled *bsad* by *NP_{12T}*. *Jä* considers this form “usual” and both forms are attested in other texts as well.

3.3 Colophons and Translators

The earliest mention of a translation of the *TGS* into Tibetan is found in the catalogue of lHan dkar, compiled in 812 or 824 CE.⁹² The name of the *TGS* appears in the section *Theg pa chen po 'i mdo sde sna tshogs la / bam po bcu man chad la*, “Various Mahāyāna sūtras shorter than 10 *bam pos*.”⁹³

*'Phags pa de bzhin gshegs pa snying po / 310 ślo ka / 1 bam po / 10 ślo ka //*⁹⁴

We have good reason to assume that the translation mentioned is in fact *Tib*.⁹⁵ The mention of the existence of the translation of *Tib* already at the beginning of the ninth century is in line with the colophons found in some of the versions of *Tib*, where the famous Ye shes sde and others are credited with the execution and the revision of the translation. Concerning Ye shes sde, we know that he was active during the time of the composition of the three manuals regulating the “New Terminology” (*skad gsar*). In one of these manuals, the 814 version of the *sGra sbyor bam po gnyis pa*,⁹⁶ he is mentioned among the Tibetan scholars involved in the compilation of the *Mahāvvyutpatti* from about the same period.⁹⁷ Thus his time of activity must have been the early years of the ninth century. The vocabulary

⁹¹ My assumption is supported by the evidence of the *Li shi gur khang*, completed in 1536, which states that texts which had not yet undergone the Normative Prescription of New Terminology read *yog pa* instead of *g.yogs pa* (see Taube 1978: 173). This Normative Prescription should be the one formulated in the *sGra sbyor bam po gnyis pa*, which we can now date to the year 795 (see Panglung 1994: 167).

⁹² See references in Mimaki 1982: 9, n. 21.

⁹³ For the term *bam po* see Scherrer-Schaub 1992: 218–220.

⁹⁴ See Lalou 1953: 323.

⁹⁵ The *Tshig mdzod* (s.v. *sho lo ka*) gives a length of 30 to 32 syllables per *śloka*, which would amount to 9,300 to 9,920 syllables for the *TGS* according to the length mentioned in the lHan dkar catalogue. Given that the verses in *Tib* consist of four verse pādas with nine syllables each, a *śloka* is likely to comprise 36 syllables. Thus, for 310 *ślokas*, we arrive at 11,160 syllables. The number of syllables in *Tib* is in fact about 10,650 and in *Bth* about 10,570. Both translations, *Tib* and *Bth*, lie within close range of the number of *ślokas* mentioned in the lHan dkar catalogue. Only *Tib*, however, has the term *'phags* for *ārya* at the beginning of the title—the same term that appears in the lHan dkar catalogue entry.

⁹⁶ There exists an older version issued in the year 795 or 783 (see Panglung 1994).

⁹⁷ See Simonsson 1957: 241f.

used in *Tib* is for the most part in accordance with the terminology decided on in the *MVy*.⁹⁸ Thus knowing, on the one hand, that *Tib* reflects the New Terminology,⁹⁹ and that, on the other, a translation of the *TGS* is already mentioned in the IHan dkar catalogue, we have no reason to doubt that *Tib* is a product of the translation activities at the beginning of the ninth century.

The analysis of the variants in *Tib* has revealed the existence of four main transmissional lines. This result is confirmed by the colophons of *Tib*, which differ according to the particular group:

- (a) *P*₁₂₃: no colophon
- (b) *LST*: *rgya gar gyi mkhan po shā kya pra bha dang / zhu chen gyi lo tstsha ba ban de ye shes sdes bsgyur cing zhus te gtan la phab pa //*
 “The Indian master Śākyaprabha and the Venerable Great Reviser and Translator Ye shes sde have executed [this] translation and revised and established [it] definitively.”
- (c) *BDJNQ*: *rgya gar gyi mkhan po shā kya pra bha dang / zhu chen gyi lo tstsha ba ban de ye shes sdes bsgyur cing zhus te skad (g)sar chad(!) kyis kyang bcos nas gtan la phab pa //*
 “... have executed [this] translation and revised [it], and having emended [it] according to the Normative Prescription of New Terminology as well,¹⁰⁰ established [it] definitively.”
- (d) *A*: *rgya gar gyi mkhan po 'dzi na myi tra dang / da na shi la dang / zhu chen gyi lo tstsha ba ban de ye shes sde las stsogs pas bsgyurd cing zhus te / skad¹ gsar cad kyis kyang bcos nas gtan la phab te chos kyī phyag² rgyas btab pa //* [¹ ms reads *skar*; ² ms reads *phyad*]
 “The Indian masters Jinamitra, Dānaśīla, the Venerable Great Reviser and Translator Ye shes sde and others have executed [this] translation and revised [it], and having emended [it] according to the Normative Prescription of New Terminology as well, established [it] definitively, and confirmed [it] with the Dharma seal.”

No conclusions can be drawn from the colophons as to the stemmatic relations among the four groups. The wording of colophons is too standardized, and they can easily be added to texts without giving rise to suspicion. *Tib* demonstrates this clearly. Two different groups of translators/revisers are mentioned: Tshal pa and Them spangs ma bear the names Śākyaprabha and Ye shes sde, while *A* has “Ye shes sde, Jinamitra, Dānaśīla and others.” The *TGS* is hardly the only instance of such confusion in regard to translators,¹⁰¹ and we should be careful about

⁹⁸ See Zimmermann 1998: 42–46.

⁹⁹ Whether *Tib* is the revised version of an earlier translation of the *TGS* is an open question. *Bth*, however, is too different to be a possible candidate for such a pre-standardized version of *Tib*.

¹⁰⁰ This must be the revision of translations and the execution of new translations according to the recently compiled manuals such as the *MVy* at the beginning of the ninth century.

¹⁰¹ Two other cases come immediately to my mind: the *DKP*, where the Phug brag version has Śīlendrābodhi and Ye shes sde (no. 294) against dPal gyi lhun po and dPal brtsegs in all other versions; and the *Śūramāgamasamādhisūtra*, where the Phug brag versions have no colophon at all

definitive attributions. We do not know when colophons were added to canonical translations and what exactly certain translator names conjured up at the time.

Generally speaking, one assumes in colophons a tendency to substitute famous names for less well-known ones rather than vice versa. In the case of the *TGS*, this would mean that Śākyaprabha is the name of the original translator. In the Peking Kanjur (Otani), he appears as translator for only ten texts.¹⁰² Nothing is heard about him as a collaborator in the team of scholars that compiled the rules and the vocabulary of the New Terminology. Both Jinamitra and Dānaśīla, on the other hand, are mentioned as having participated in that project.¹⁰³ In the Peking Kanjur (Otani), Jinamitra is credited with 160 translations, while Dānaśīla is mentioned 107 times. Together with Ye shes sde, they functioned as an important translation team at the beginning of the ninth century.¹⁰⁴ The fact that the attribution of *Tib* to Jinamitra and Dānaśīla in *A* is likely to be secondary does not accord with the above evaluation of the recensional variants of *A* as original.¹⁰⁵ However, as stated above, we should be cautious and not overplay the possibility that *A*'s colophon could be secondary. We should not, that is, let this possibility outweigh the “hard facts” of the variant analysis. The issue, in any case, is without relevance for determining the period in which *Tib* originated, for Ye shes sde, one of the main exponents of this period, appears in all of the available colophons.¹⁰⁶

In view of the fact that *Tib*, in its choice of vocabulary, follows closely the standards of the New Terminology, it is impossible to explain why the colophon in *LST* does not mention that the text has been “emended according to the Normative Prescription of New Terminology,” as expressed in the Tshal pa group and *A*. This inconsistency is also found in other texts, such as the *Drumakinnararājaparipṛchāsūtra*¹⁰⁷ or the *Saddharmapuṇḍarīka*,¹⁰⁸ even though, as with *Tib*, there are no traces in the particular versions of anything less standardized than the New Terminology. I refrain from a speculative discussion of this problematic point. A great deal more comprehensive research in regard to the differences of colophons of canonical translations and their appearance in the various Kanjurs needs to be done in order to arrive at satisfactory conclusions.

(no. 207 and 387), while the Stog Kanjur version has Jinamitra, Śilendrabodhi and Ye shes sde (no. 67) versus the Peking Kanjur's (no. 800) Śākyaprabha and Ratnarakṣita.

¹⁰² Of these ten translations, the *TGS* is the only text he translated together with Ye shes sde alone.

¹⁰³ See Simonsson 1957: 241.

¹⁰⁴ Bu ston (1290–1364), in his “History of Buddhism,” mentions Jinamitra and Ye shes sde among others (see Obermiller 1932: 196f.).

¹⁰⁵ A biography of Rin chen bzang po believed to be written by one of his immediate disciples states that he worked together with the scholars Jinamitra, Śilendrabodhi and Ye shes sde (Snellgrove and Skorupski 1980: 105.15f. (90.7)). As Rin chen bzang po, who had close links with Tabo monastery, lived in the tenth/eleventh century, this can hardly be possible. What is demonstrated, however, is that from early times on Jinamitra, who appears in the colophon of *A*, was somehow associated in people's mind with the activities of Rin chen bzang po. This simple reason may explain why in the colophon of the Tabo manuscript he and his colleague Dānaśīla could oust the little-known Śākyaprabha.

¹⁰⁶ In Bu ston's “History of Buddhism,” too, the translation of the *TGS* is associated with Ye shes sde (see Nishioka 1980: 75).

¹⁰⁷ See Harrison 1992a: xlv f.

¹⁰⁸ See Simonsson 1957: 219ff.

Similarly problematic is the meaning of the colophons. We do not know what exactly is meant by the different operations mentioned in the colophon¹⁰⁹ or whether all scholars mentioned participated in all of the operations.¹¹⁰ Further, the real history of a text from its first rough translation to the canonical version may have been more complex than the standardized colophon can indicate. This has been demonstrated by Simonsson in the case of the *SP*, for which he assumes several revisions which finally led to a/the canonical version (1957: 114). For the time being, in order to determine the relation between the versions of a text one can only compare these different versions by noting their variants—not by rely on colophons which, given their highly conventional form, could easily have been transferred from one version to another without necessarily applying to the text version in question.

4 A Brief Evaluation of the Chinese Materials

The Taishō edition of the translation by Amoghavajra (*Ch*₂) contains several readings which, in view of the Jin edition and the other translations, must be called faulty. In 44 instances the text had to be emended. This is an average of about 9 emendations per Taishō page. Of these emendations, the Taishō edition deviates from the Korean and Jin edition in 12 cases. In these instances the readings of the Taishō are inaccurate, introduced by its editors. I emended the Taishō edition 24 times according to the Jin edition; 7 additional times I had to introduce a reading not found in any of the materials utilized for *Ch*₂. The high number of corrections following the Jin edition underscores the great value of this edition for working with *Ch*₂. Of the 50 differences in the text between *T* and the Jin edition,¹¹¹ only 2 readings of the Jin edition can be said to be definitely erroneous, while in 11 cases both alternatives, namely the readings of the Taishō and of the Jin edition, seem equally possible.

The result may be randomly extreme and true only for *Ch*₂. Nevertheless, it demonstrates that in any further critical edition of Chinese Buddhist texts, the Jin edition should be checked, for it could turn out to provide indispensable testimony.

In the case of *Ch*₁, the translation of Buddhahadra, the situation is different. Altogether, 16 different versions are reflected in my edition, the majority of them collated by the editors of the Jin and Taishō editions. I have further included in my edition the only two Dunhuang fragments (*Dh*_a, *Dh*_b) of the *TGS*. According

¹⁰⁹ The last phrase in the colophon of *A* rarely occurs: ... *chos kyi phyag rgyas btab* (“... confirmed [it] with the Dharma seal.”). It remains to be seen whether this formulation appears regularly in the colophons of the Tabo manuscripts and what the presence of this addition may mean for the history of the version in question.

¹¹⁰ For an extensive discussion on the operations and the relation of the operations mentioned in the colophons see, among others, Simonsson 1957: 210ff. Simonsson reflects on the possibility that the verb *bsgyur* in the colophon may not imply that the text to which the colophon belongs is necessarily a “direct translation from a foreign language” (p. 223) but could also indicate a revision of the text.

¹¹¹ The technical apparatus of *Ji*₂ indicates differences between it and *Ga*₂. Unfortunately, it cannot be said to comprise all of them. I consequently have had to check the Korean edition on my own.

to the colophon, *Dh_b* can be dated to the year 639. The characters are written very accurately and artistically. This cannot be said about *Dh_a*, the second Dunhuang fragment. It does not have a colophon, but judging from the style the characters are written in, it should be younger than *Dh_b*.¹¹²

There are plenty of variants throughout the text. As the combinations of manuscripts and xylographs which share readings vary, combinations under which they can be grouped together are difficult to establish. In general the combinations *MiYu*, *KuMiSoYu*, and *JsNaPuQiQs(Zi)* seem to be common. Any statement about their possible stemma will have to await a more detailed analysis, which is beyond the aim of this study.

The position of the Jin edition in *Ch₁* is not particularly noteworthy. Among the 21 emendations, this edition shows the correct reading in only 5 cases. A much more faithful transmission, however, is *Dh_a*: 14 of the 21 emendations of the Taishō edition are based on, among others, *Dh_a*. Nothing can be said about the transmissional quality of *Dh_b*, because the portion of text for which it has been preserved is too short.

5 Remarks on the Various Editions

5.1 Principles Governing the Critical Edition of *Tib*

The primary aim of this edition is to establish *Tib* in a form as close as possible to what came from the hands of the translators. In fact, the materials collated are just one part of many more different versions of *Tib*, which are either difficult to inspect or have not been made accessible at all yet. To say “as close as possible as to what came from the hands of the translators” means going as far back as the present materials allow. Discoveries of new material may well contain more archaic versions of *Tib*, and these would certainly enable us to draw a fuller picture of what the earliest version of *Tib* looked like. For the time being, the main principle of the edition has been to give preference to those variants which accord with *Bth* and/or the Chinese translations, which derive from an Indian text very close to the text *Tib* is based on. I have refrained from emending the Tibetan text when no variants justifying such an emendation could be found and when it was not plausible to assume a mistake within the Tibetan transmission caused by graphical similarity or the like. Whether any particular questionable reading of *Tib* has its source in an already faulty Indian manuscript, in a decision on the part of the translators not to render the passage in accordance with the Indian text or in a mistake pure and simple in the translational process is hence of no further meaning for the process of emendation.

In cases where the other translations are not a sufficient basis upon which to evaluate variants of *Tib*, I have adopted the following guideline: No case can be decided mechanically; that is, no combination of manuscripts or prints can automatically be accorded preference without analyzing at the same time any other variants. Decisions should be made on a case-by-case basis, taking into account the content and weighing the probability that individual variants could arise. In many instances, it is thus possible to explain a variant by arguing on the

¹¹² I owe this assessment to Professor Ikeda On from Soka University (Hachioji, Tokyo). I would like to thank him for his help regarding the Dunhuang materials.

basis of such things as *aberratio oculi*, dittography, haplography and number of syllables in the verse pādas. A more rigid method has been chosen only if such criteria could not be convincingly applied: As the analysis above shows, Tshal pa and Phug brag are closely affiliated. The relation between Them spangs ma and *A* is not absolutely clear. In (28) above it is evident that in three cases out of four it was the pair Tshal pa/Phug brag which introduced the mistake, probably owing to the heavy revision the transmissions have undergone. For variants conforming to this particular combination where we have no means of deciding upon their originality, I have accordingly adopted the *A*/Them spangs ma reading for the edition, since the probability of Tshal pa/Phug brag being non-original may here be greater. (*A* sides with Tshal pa and *L* in only one instance (see (29)). In this case I have arbitrarily adopted the reading shared by *A*, *L* and Tshal pa.)

For the portions of text lacking the testimony of *A*, we are confronted with just two main lines of transmission: Tshal pa/Phug brag and Them spangs ma. As stated above, Tshal pa/Phug brag seem to have undergone a heavy revision— heavier than Them spangs ma was exposed to, as is suggested by the low number of single variants of Them spangs ma shown under (34). *LST* can thus be said to have preserved a version closer to the original Tibetan, and I have therefore decided to adopt the readings of the Them spangs ma for the edition, even when both Phug brag and Tshal pa show a different reading. According to my hypothesis put forward above, I give priority to the Them spangs ma reading established by *LST*—the best case—or by *LT* and *ST*, wherever only two representatives of the Them spangs ma share a reading.

Regarding punctuation, transliterations and orthography, I decided to follow the oldest manuscript within the tradition of the Them spangs ma, namely the London copy of the Shel dkar chos sde from 1712. However, I did not adopt the numerous contractions of *L* for the edition and the omission of genitive particles, though the latter feature could be explained as an archaic characteristic (see section 3.1). Concerning orthography, the borderline between orthographic idiosyncrasies and faulty spellings is in some instances not clear (e.g. *LSTP*₃: *mchu* for *chu* in 10D, n. 26). Decisions in this matter must be made on a more or less subjective basis until more ancient Tibetan material has been systematically analyzed. The critical edition of *Tib* is consequently intended to establish:

- (1) the *urtext* of *Tib* for the portions of text shared with *A*,¹¹³
- (2) the *Them spangs ma archetype* for the portions of text where we have no testimony of *A* and where the reading of the Them spangs ma archetype does not violate the *urtext* reconstructed on the basis of the other translations, and
- (3) the *diplomatic* punctuation, transliterations and orthographic idiosyncrasies (but not obvious misspellings, contractions and abbreviations) of *L* throughout the whole text.

5.2 Remarks on All Editions and Their Critical Apparatuses

In order to allow an immediate comparison of all versions of any given passage, I have decided to arrange the corresponding sections on facing pages. In general,

¹¹³ Though we have had reason to argue that the major single variants of *A* may well represent an archaic state of transmission, I have refrained from adopting these readings into the edition.

one double page comprises one section. In some cases, the section is too long to fit on facing pages, and consequently I have had to place the second half of the section on the following two pages. The numbering within the critical apparatuses is not affected by this.

I have always arranged sigla of versions which belong to the same family (e.g. L, S and T, or *Ku, Mi, So* and *Yu*) as a cluster unaffected by the rule of alphabetic precedence (e.g. LSTN and not LNST, or *KuMiSoYuNa* and not *KuMiNaSoYu*).

For added clarity, I have refrained from using italics for the sigla of the collated texts of *Tib* when mentioning them in the apparatuses.

5.3 The Editions of the Tibetan Translations

Following the examples in Eimer 1983b and Harrison 1992a, I have decided to resort to a divided critical apparatus in the presentation of *Tib*. The main apparatus, comprising all variants shared by more than one manuscript or xylographic edition, is found with superscribed Arabic numerals right below the Tibetan text of each section. Single variants, marked with superscribed lower case roman letters, appear at the end of the whole edition. Some few cases of variants shared by two manuscripts or xylographic editions are given in the critical apparatus at the end because of their very trivial and coincidental nature (e.g. the use of a *spungs shad* at the beginning of a line). On the other hand, some significant single variants which imply a different understanding of the text have been adopted in the main apparatus.

I have tried to keep the apparatuses as easy to read as possible so that, even without studying intensively the guide to the edition, one should be able to deduce the reading of each manuscript. For the sake of maximum clarity, I have therefore noted what the variant reading reported in the apparatus replaces in the main text (e.g. *yong_s* for *yongs su*; *'di* for *cig*). In many cases the situation was clear and deserved no further specification: for example, when the main text reads "... *dam* /^p" with the variant "⁹ BQ: /." it is evident that *BQ* have the *rkyang shad* instead of the *nyis shad*, or in the case of the variant "^m P₃: *kyi*." corresponding to the main text "... *tsan dan gyi^m snying po'i*...." that *P₃* reads *kyi* instead of *gyi*. In the case of additional words in a manuscript or edition, I have typed the additional part in **boldface**, adding the syllable right before and behind it: for instance, the single variant "^z P₂: *mongs pa rnams*." indicates that the text "... *nyon mongs^z rnams kyis*...." appears as "... *nyon mongs pa rnams kyis*...." in *P₂*.

The letters and punctuation in the various manuscripts and xylographic editions are not always unambiguously readable. This is especially true of *nga* and *da, pa* and *ba*, and of the *tsheg* between syllables (the last particularly in *J* and *T*). I have documented in the apparatuses all cases where letters are completely illegible. However, if single letters are doubtful but could graphically be interpreted in accordance with *all* other collated manuscripts and xylographic editions of *Tib* in that passage, I have adopted the reading in question as probably the same as in the other materials.

In the transliteration of the Tibetan, the *tsheg* is rendered with a blank space: so, for example, ལཱཱཾ is transliterated as *la'am* whereas ལཱཱཾ becomes *la*

'am. Exceptions are the blank spaces before and after *shad*. These spaces have simply been inserted for the sake of more lucidity in the transliteration.

I have indicated in the apparatuses all of the lacunas occurring in the materials belonging to *Tib*. In the case of *Bth*, however, lacunas are extremely frequent, so that I have mentioned only cases where partially erased letters are still found in them.

If *go*, '*gro* or a word ending in *-g* is placed before a *nyis shad*, the first *shad* of the *nyis shad* is always omitted by the scribes of *BJNQLSP₁₃* and also *Bth*. The scribes of *D* and *T* do not always follow this rule. However, in all these cases my transliteration is *go //*, '*gro //* or *-g //*. *A* places the *nyis shad* and even a triple *shad* after *go* or *-g*. In the prose, *P₂* omits the first *shad* after *go* or *-g* like the majority of manuscripts and xylographs. In the verse section, where *P₂* generally separates the *pādas* with a *rkyang shad* followed by a gap right after the end of the preceding *pāda* (e.g. ... གོས་ཀྱི་ མི་འགའ་....), the *rkyang shad* appears instead at the end of the lacuna, when this *pāda* ends with *go* or *-g*: e.g. ... འབྲུག་ འདི་ལྟར་....

Of minor interest but clearly indicating the different affiliations of the texts are the forms of the *rin chen spungs shad* or *kyog shad*. They are usually employed instead of a *shad* at the beginning of a line after one of the first syllables, and in some cases also towards the end of a line. I have always noted the position of this *spungs shad* within the line and, if there was any, mentioned the probable reason for its employment. The forms vary and look approximately like this:

- AJNP₂BuBth*: no *spungs shad*;
- B*: ། , །། , from 324b onwards: །། , །།། ;
- D*: ། or །། ;
- L*: ། , །། , །།། ;
- S*: །། , །།། ;
- T*: ། ;
- P₁P₃*: །། , །།། །། ;
- Q*: ། , །། .

Because subscripts (e.g. *mong_s*, *rdzog_s* etc.), contractions (e.g. *skyes(s)o*, *yongs(s)u* etc.), the use of the *anusvāra*-like abbreviation for *m* and abbreviations in the scripts are often due to such things as the scarceness of space towards the end of a line, string holes and emendations, I have, whenever obvious, tried to report these features in the apparatuses. In *Bth* I have therefore indicated the end of a line by the symbol “¹”. In this way one can differentiate between what follows from the particular arrangement of the text on a folio and what may go back to the manuscript which the scribe was copying. It is hoped that this apparently superfluous information will be of some value in the event that further Kanjur materials are discovered in the future.

In several instances the transliterations *pī* (ཕི) and *bī* (བི) appear in the apparatuses. They are short for *pa'i* (ཕའི) and *ba'i* (བའི) respectively. Similarly, for *pa'i* in *Bth* at the end of the line, we sometimes have a *pa* with an '*a chung* beneath. Above the *pa* is a mark resembling a parallel double '*greng bu*. The character appears as *pai* in the diplomatic edition.

Concerning *A*, I have not noted the use of the *ya btags* in any words beginning with *m-* in combination with the vowel *i* or *e* (e.g. *myed*, *myi* etc.).

Another particularity of *A* throughout the text which I have not mentioned in the edition is the contraction of the cluster *st-* (𑖦) to the horizontal ligature 𑖦, of *spy-* (𑖦) to 𑖦, or of *rts-* (𑖦) to 𑖦.

5.4 The Chinese Editions

For the edition of the Chinese texts, I have consulted *T* 666, *Dh_a*, *Dh_b*, *Fs*, *Ga₁* and *Ji₁* in the case of *Ch₁*, and *T* 667, *Ga₂* and *Ji₂* in the case of *Ch₂*. I have further incorporated the variants noted in the editions of *T* and *Ji₁/Ji₂* (see below). In the case of *Fs*, which is one of the texts consulted by the editors of *Ji₁*, I verified the readings on my own since in some cases, unfortunately, variants of *Fs* are not mentioned in the apparatus of *Ji₁*. I could not verify whether the variants of the other texts collated in the apparatus of *Ji₁* are completely and correctly reported.

The basis for my critical editions in all points but punctuation has been the two texts found in *T*. In the case of variants, I have always adopted the reading of *T* if there were no reasons for thinking that a variant found in another version reflects a more authentic stage of textual transmission. When the reading *x* in *T* was emended to such a variant *y* (marked by “*y*[versions where *y* is found]←*x*[versions where the reading of *T* is found] (reason for alteration)”), I have usually supplied a reason why I thought this necessary in parentheses at the end of the corresponding footnote in the apparatuses. In most instances my arguments are based on parallels in the other translations, on other similar passages in the same Chinese translation, or on the 4-syllable rhythm in the prose and the 2–3 (*Ch₁*) or 4–3 (*Ch₂*) rhythm in the verses, though the argument from rhythm should be treated with care: it cannot be employed mechanically throughout the whole text. Especially when the Sanskrit is translated by means of well-established technical terms, the considerations of rhythm are of merely subordinate significance.

In contrast to the critical edition of *Tib*, I have restricted myself here to mentioning only significant variants in the critical apparatus below the text. Variants consisting of characters written without any semantic variation in abbreviated or uncommon forms are usually not mentioned whenever the characters were identified as equivalent according to the *DK*, *HD* or *NIJ* (e.g. in *Ch₁* 0.3b: 𑖦, 𑖦, 𑖦, 𑖦). In cases where I could not be sure whether the variant expressed a slightly different notion (and this accounts for most cases), I decided to give the variant in a footnote (e.g. in *Ch₁* 5.3d: 常存不變易 for 常在不變易). Not mentioned, however, are variants resulting from obvious mistakes by the copyist, and invariably hindering a meaningful understanding of the context (e.g. *Ch₁* 11D: *Ji₁*: 二寶 for 三寶).

I have dealt with the complex questions of whether to punctuate the Chinese editions—and if so, how—in the following way. Opinion among Sinologists experienced with Chinese translations of Indian Buddhist texts varies greatly in this matter. The view that the text should not be punctuated at all and should be rendered as it was produced by the translator, namely without any indicators, forms one extreme of the range of alternatives. For the reader, this offers the advantage that he can approach the text without being biased towards the punctuation of an editor. To question the understanding suggested by an editor

when translating the text oneself is not that easy, and one can quickly end up unconsciously following a given interpretation without taking pains to examine all alternatives.

On the other hand, I think that the activity of an Indologist specializing in Buddhist studies should not be limited to a purely descriptive collation of the Chinese materials. It is equally a part of his work to show the reader how he himself understands the text, even at the cost of sometimes overshadowing other possible readings. Especially when taking just a quick look at a passage in a certain text I, for one part, have found it quite helpful and timesaving to seek some guidance from an editor's punctuation, and so avoid having to consult some translation. This standpoint, in fact, probably represents the view of anybody who cannot call himself a Sinologist and whose main field of Buddhological studies lies—as is still the case for many Western Buddhologists—in India. The situation of a Sinologist with a good acquaintance of the genre of Buddhist translations is likely to be different. My punctuation will be disturbing to such a scholar, and he is advised to consult only the emendations suggested in my apparatuses when reading the text in the Taishō.

At the other extreme of the range of possible punctuations is a system which can be called currently dominant on mainland China, where it is widely employed when dealing with old as well as contemporary literature. It incorporates virtually all of the Western punctuation marks, including even question and exclamation marks, inverted commas and semicolons. And though it may be the freely chosen standard of punctuation in China, it reminds a Western scholar immediately of Europe's Orientalist custom of imposing inappropriate Western standards upon local indigenous cultures. I cannot judge whether Western punctuation fits the structure of the Chinese language. This question can only be answered by specialists in that field. In the editions, I restrict myself to the use of three punctuation marks, namely the *juhao* 句號“。”, the *douhao* 逗號“，” and the *dunhao* 頓號“、”，two of which (*juhao* and *dunhao*) can already be found in Chinese texts from the Han 漢 dynasty. The role of the *dunhao* in my editions is the easiest to define: it functions as an enumerative comma separating the single members in a list of coordinated items. Long enumerations, especially in 0E, which contains the names of 50 bodhisattvas, thus become much easier to deal with. The decision to use it, however, forced me in many instances to determine how to segment compounds consisting of several characters. If the Tibetan parallel did not help and no other occurrences of parts of the combinations could be found in the same text, choices had in some instances to be made on an admittedly arbitrary basis.

The decision whether to choose the *juhao* 句號“。” or the *douhao* 逗號“，” may also have been arbitrary in many cases. Whilst the *juhao* is here in general intended to indicate where a group of closely connected syntactic units which we may call a “sentence” should be divided from another such group, the *douhao* serves to show component structures within this group. No *douhao* is set between a subject, predicate, object and any adverbial specifications. The *douhao* is, however, regularly employed to mark embedded subordinate clauses, to separate predicative elements from each other and to set off direct speech (e.g. 復次，善男子，譬如貧家有...).

I am, of course, aware that the borderline between the *juhao* and the *douhao* is often impossible to define; that is, there is not always a definite

sentence break. Whenever the basic rules of Chinese grammar allow, I have tried to tailor my decisions to the Tibetan versions (especially when dealing with *Ch*₂) and the possible Indian structure on which the translations are based.

It is clear that this kind of rule cannot provide more than a rough indication of why I felt these Chinese translations ought to be so punctuated. For texts from a different genre, the guidelines might well be quite different. I do not consider the textual understanding implied by my punctuation to be the only one conceivable—rather a suggestion that clearly mirrors the Indian background of the text.

大方廣如來藏經

*開府儀同三司、特進試鴻臚卿、肅國公
食邑三千戶、賜紫、贈司空、謚大辨¹正、
號²大廣智、大興善寺三藏沙門不空奉詔譯。

* All the titles mentioned in the colophon are found in the biographies of Amoghavajra contained in *T* 2056 (大唐故大德贈司空大辨正廣智不空三藏行狀) and *T* 2061 (宋高僧傳). A translation of the part concerning Amoghavajra in the 宋高僧傳 was done by Chou (1944/45: 284-307).

¹ 辨←鑿 (see the title of the biography of Amoghavajra by his pupil (according to *BSKD* vol.7, p. 372c) (*T* 2056): 大唐故大德贈司空大辨正廣智不空三藏行狀; the same titles are also mentioned in the text itself (294a28); see also *T* 2061, 713c6-7: 謚曰大辯廣正智三藏, which should probably be emended to 謚曰大辨正廣智三藏.)

² 號 could also refer to 謚大辨正.

“In compliance with an imperial decree translated by the Tripiṭaka [Specialist] of the temple Da Xingshan,^a with the title “One of Great and Wide Knowledge”^b, the Śrāmaṇa Amoghavajra, Commander Unequaled in Honor,^c Specially Promoted Probationary Chief of the Court of State Ceremonial,^d Duke of Su [with] a Fief of 3,000 Households,^e endowed with a purple [robe],^f given [the title of a] Minister of Works,^g posthumously called ‘One Who Greatly Reveals Righteousness’^h.”

^a The temple Da Xingshan was situated in the capital, Chang’an.

^b The title 大廣智 appears in connection with 三藏 (*T* 2056, 293b22: 號大廣智三藏; *T* 2061, 713a11-12: 加號大廣智三藏) but also as part of Amoghavajra’s posthumous name (*T* 2061, 713c6-7: see above fn. 1; *T* 2056, 294a28: 謚曰大辨正廣智不空三藏).

^c See Hucker 1985: 3105; *T* 2056, 293c21-22; *T* 2061, 713b21-22.

^d See Hucker 1985: 6335; 5204; 2905; *T* 2056, 293b22; *T* 2061, 713a11.

^e See Hucker 1985: 3258; 5258; *T* 2056, 293c22; *T* 2061, 713b22.

^f The purple robe was bestowed on Amoghavajra by the Emperor after Amoghavajra had managed “to make it rain” in a very dry summer. See *T* 2056, 293a24; *T* 2061, 712c16.

^g See Hucker 1985: 5687; *T* 2056, 294a28; *T* 2061, 713c6.

^h See *T* 2056, 294a28; *T* 2061, 713c6-7: 謚曰大辯廣正智三藏, which probably should be emended to 謚曰大辨正廣智三藏.

爾時世尊告金剛慧菩薩、摩訶薩言。汝、善男子，今應可問如來、應、
 正等覺甚深法要。爾時金剛慧菩薩、摩訶薩承佛聖旨，普爲一切天、人
 世間、菩薩、摩訶薩及四部衆懷疑惑故，白佛言。世尊，以何因緣一切
 世界現於俱胝那庾多百千蓮花，一切於花胎中皆有如來，結跏趺坐，放
 百千光，是諸蓮花忽然之間形色可惡，而令生厭，於彼花中俱胝那庾多
 百千如來合掌而住，儼然不動。

Ch₂

如是如是，善男子，如來、應供、正遍知以如來眼觀見一切有情具如來
 體，為煩惱皮之所苞¹裹，若能悟解，則成正覺，堅固安住自然之智。善
 男子，彼如來藏處在一切煩惱之中。如來為彼有情除煩惱皮，令其清
 淨，而成於佛，為於說²法，常作是念。何時有情斂去一切煩惱藏皮，得
 成如來，出現於世。

¹ Ji₂: 包 for 苞.

² 於說[=Ji₂]←說於 (Ji₂ shows the *lectio difficilior*; the reading 為說於法 is to be expected. Though the particle 於 is also used in Ch₂ to mark the object of an action, it never appears throughout the text in case of the exposition of the Dharma (e.g. ... 說於法). On the other hand, the combination 為於 appears several times in order to mark the subjects benefiting from the Buddha's activity: (1B) 如來 ... 為於菩薩而說法要; (4B) 如來 ... 為於有情除諸煩惱; (5B) 是以為於菩薩宣說妙法. It is remarkable that Ch₂ adds 妙 (which is without any counterpart in the Tib. versions) to 法 rather than to employ 於 to characterize 法 as the object. (Cf. 5B quoted above; also: (7B) 為諸菩薩而說妙法). The emended text should accordingly be understood as "... teaches the Dharma for [them] (為於).")

[7.6] 即解彼已現佛智³ 彼時一切煩惱靜

是故號名於如來 人天歡喜而供養

² The construction 爲 ... 已 (“Because [I] have seen that,....”) is uncommon. An emendation of 爲 to 我 in light of *Tib*, *Bth* (*ngas*) and *Ch₁* (佛), or to 即 as in 7.6a could be an alternative.

³ 智[*Ji₂*]←身 (Tib.: *ye shes*; *Ch₁*: 智).

如是如是，善男子，如來以如來眼觀見一切有情如金像模。外為煩惱泥
 所覆裹，於內虛沖滿有佛法、無漏智¹寶。善男子，我今觀見一切有情悉
 皆如是，在菩薩眾，而說妙法。若菩薩、摩訶薩，若得寂靜、清涼，如
 來為彼有情以金剛器仗淨其法眼，除其煩惱及隨煩惱，為淨如來智寶藏
 故。善男子，如來猶如持寶像者。善男子，而破彼色及隨煩惱令得解
 脫，是名如來。善男子，如來、應、正等覺見一切有情如來藏，為無邊
 俱胝煩惱藏中之所沈沒。為彼有情破煩惱藏，於佛智見安立無上正等菩
 提。

¹ 智[Ga₂Ji₂]←知。

金剛慧，若有善男子、善女人求無上菩提者，於彼諸佛、世尊、并及菩薩、聲聞大衆，取曼陀羅花百千斛，日日供養，復滿千劫。金剛慧，若餘苾芻¹、苾芻¹尼、鄔波索迦、鄔波斯迦發菩提心，聞此如來藏經、法要，乃至合掌禮敬，作隨喜語。金剛慧，以此勝福、善根，與前善根，獻花功德，如來安立，比前功德，百分、迦羅分、千分、無數分不如一分。

Ch₂

爾時世尊復說伽他曰。

[12.1] 菩薩聞此修多羅 作是思惟獲勝覺

若有人手得此經 人天禮拜應恭敬

[12.2] 諸佛世尊大導師 稱讚彼人人中最

亦名最勝之法王 若經人于¹彼人手

[12.3] 是人照曜如滿月 應受禮敬如世尊

能持法炬爲世雄 由入此經於彼手

¹ 于[Ji₂] ←干.

Ch₁

Only Dh_b has a colophon:

延壽十六年七月十日

經生鞏達子

用緝¹十二張

法師曇顯校

Translation in Giles 1957: 107 (no. 3848):

Dated the 10th day of the 7th moon of the 16th year of Yen-shou [=Yanshou] (14th Aug., 639). Copyist, Kung Ta-tzū. 12 sheets of paper used. (Only 3 remain.) Revised by T'an-hsien [=Tanxian], Master of the Law.

¹ Giles reads 緝 instead of 緝. The ms reads 緝.

Bth

*¹ // om̐ ye dha rma hedu pra bha wa he tun te shan ta tha ga to hye² ba tod ṣan tsa yo ni ro dha a tsbaṁng³ ba ti ma ha shra ma na yasbahā //¹ yon mchod bkra ḥ shis par gyur cig // gsungs rab zhal grol⁴ bar gyur cig om̐ ma ṇi pad me huṁ hri // //

¹ * symbols a dotted circle with a dot in its center with the size of one letter.

² Not clear: *hye* or *hyi*?

³ *Tsba* (𑖦) resulting from a misread 𑖦?

⁴ Bottom part not readable: *grol* or *gol*?

Regarding the well-known *ye dharmā* formula in the colophon see Skilling 2000 who collated various versions/recensions of the formula. The correct Sanskrit version on which the colophon of *Bth* was probably based reads:

*ye dharmā hetuprabhavā hetuṁ teṣāṁ tathāgato hy avadat /
teṣāṁ ca yo nirodha evaṁvādī mahāśramaṇaḥ //*

For the diffusion and the significance of the verse during the early medieval period in India see Boucher 1991.

¹ I would like to thank Professor Scherrer-Schaub and Dr. Tauscher for sending me the relevant photos.

² The “Berlin manuscript Kanjur” is catalogued in Beckh 1914. I would like to thank Dr. Feistel of the Staatsbibliothek in Berlin for providing me with the microfilms of *Tib* in both the Berlin manuscript Kanjur and the Lithang Kanjur.

³ For references concerning this manuscript Kanjur see Skilling 2001 and Zimmermann 1998: 34. My thanks go to Dr. Reynolds for promptly providing me with a microfilm containing this paracanonical translation of the *TGS*.

⁴ *The Collected Works of Bu-Ston*, ed. Lokesh Chandra, vols. 1–28, Śata-Piṭaka-Series 41–68. New Delhi: International Academy of Indian Culture, 1965–1971.

⁵ *The Nyingma Edition of the sDe-dge bKa'-gyur and bsTan-'gyur*, ed. Tarthang Tulku, vols. 1–117. Oakland: Dharma Publishing, 1980–1981.

⁶ I thank Professor Pagel, at the time curator of the Tibetan collection in the British Library in London, for sending me the relevant photocopies. Both text number and volume number are according to Pagel and Gaffney 1996.

⁷ I used photocopies of the microfiches (LMpj 026, 066 18/23 and 19/23) produced by the Institute for Advanced Studies of World Religions, New York, that are in the library of the Abteilung für Kultur und Geschichte Indiens und Tibets of the Asien-Afrika-Institut at the University of Hamburg. I am indebted to the librarian Dr. Erb for his support in the production of the photocopies of the Narthatang and Phug brag materials. The Narthatang Kanjur has been catalogued in Eimer and others 1998.

⁸ I used photocopies of the microfiches produced by the Institute for Advanced Studies of World Religions, New York, that are in the library of the Abteilung für Kultur und Geschichte Indiens und Tibets of the Asien-Afrika-Institut at the University of Hamburg: *P₁*: LMpj 016, 863 49B–52B/57; *P₂*: LMpj 016, 881 34E–38A/59; *P₃*: LMpj 016, 890 37E–41D/62.

- Q* *Tib* in the **Peking** Kanjur (Otani reprint): no. 924, vol. 36, *mDo*, *Shu* 259b4–274a1.⁹ In the first volume of my study “*Q*” is also used to indicate the Peking Kanjur (Otani reprint) in general.
- S* *Tib* in the **Stog** Palace manuscript Kanjur copy: no. 72, vol. 59, *mDo sde*, *Nya* 194a4–212a6.¹⁰ In the first volume of my study “*S*” is also used to indicate the Stog Palace manuscript Kanjur copy in general.
- T* *Tib* in the **Kawaguchi** Collection manuscript Kanjur of the Tōyō Bunko, **Tokyo**: no. 72, vol. 64–2, *mDo sde*, *Nya* 187a2–203b3.¹¹
- Tib* Tibetan translation of the *TGS* as contained in the main Kanjurs.

Concerning Only the Critical Edition of *Tib*

italics text written in italics has been emended by me contrary to the witness of all collated xylograph editions and manuscript versions of *Tib*

Concerning Only the Diplomatic Edition of *Bth*

- : two dots in the manuscript, aligned vertically (“colon”)
 | end of the line in the manuscript
 ↓xxxx↓ syllabl(s) between the two arrows is/are added beneath the line
 ↑xxxx↑ syllable(s) between the two arrows is/are added above the line
xxxx reading of underlined syllable is graphically not absolutely clear
 + indicates about one unreadable letter (vowels and sub-/superscribed letters included)
 ± underlined cross: unclear whether one letter or lacuna of one letter

Sigla and Graphic Devices of the Chinese Material

The bibliography of primary sources, abbreviations (for other than the material edited here) and the select secondary sources are found on pp. 405–425.

$x[a]←y(A)$ means: y , which is the reading of the Taishō and of all other versions of Ch_1 or Ch_2 not mentioned in the brackets [], is emended to x on the basis of version a . The reason for the emendation is A .

⁹ *The Tibetan Tripitaka, Peking Edition*, ed. Daisetz T. Suzuki, vols. 1–168. Repr. under the Supervision of the Otani University, Kyoto. Kyoto, Tokyo: Tibetan Tripitaka Research Institute, 1955–1961.

¹⁰ Reprint of the Stog Palace manuscript Kanjur: *The Tog Palace Manuscript of the Tibetan Kanjur*, ed. Ta-ru-gser-mgar-pa Tshe-brtan rNam-rgyal, 109 vols. Leh: Smarntsis Shesrig Dpemzod, 1975–1980.

¹¹ My thanks are due to the staff of the Tōyō Bunko for providing me with the photocopies of *Tib*. A hand-list of this Kanjur is found in Saitō 1977.

Concerning *T* 666

The pairs *Js* – *Mi*, *Pu* – *Yu*, and *So* – *Zi* refer to identical canons. However, since the editors of the *Zhonghua Dazangjing* 中華大藏經 failed to note some variants, I also gave the readings as quoted in the Taishō apparatus.

- Ch₁* Chinese translation of the *TGS* by Buddhahadra at the beginning of the fifth century (between 404 and 418, or in 420 CE).
- Dh_a* Fragmentary manuscript from Dunhuang. Published in *Dunhuang Baozang* (*The jewel store of Dunhuang) 敦煌寶藏, ed. Huang Yongwu 黃永武, vol. 59. Taipei: Xinwenfeng, 1983, 136–142: *Rulai zang jing* 如來藏經.
- Dh_b* Fragmentary manuscript from Dunhuang, copied in 639 CE. Published in *Dunhuang Baozang* (*The jewel store of Dunhuang) 敦煌寶藏, ed. Huang Yongwu 黃永武, vol. 32. Taipei: Xinwenfeng, 1982, 172–173: *Da fangdeng rulai zang jing* 大方等如來藏經.
- Fs* *Ch₁* as found in the *Fangshan shijing* 房山石經 (7th–17th century CE):¹² *Da fangdeng rulai zang jing yi juan* 大方等如來藏經一卷. In vol. “*liang* 良 till *ke* 可,” section *gai* 改, 114–115.
- Ga₁* *Ch₁* in the Second Korean Edition of the Chinese Canon (高麗大藏經) (1236–1251 CE):¹³ *Da fangdeng rulai zang jing* 大方等如來藏經. No. 360, vol. 12, 118a1–122b5.
- Ji₁* *Ch₁* in the *Zhonghua Dazangjing* 中華大藏經:¹⁴ *Da fangdeng rulai zang jing* 大方等如來藏經. No. 387, vol. 20, 559b1–563c5. The source text is the Jin edition 金藏廣勝寺本 (1149–1173 CE) collated with *Fs*, *Ga₁*, *Js*, *Na*, *Pu*, *Qi*, *Qs* and *Zi*.
- Js* One of the canons collated by the editors of *Ji₁*: the Jingshan 徑山 edition of the Ming Period: 徑 (1579–1676 CE).
- Ku* One of the canons collated by the editors of *T* (called the “Old Song edition 宮本”) from 1080–1111 CE, kept in the Library of the *Kunaishō* (Department of the Imperial Household, Tokyo) 宮內省, nowadays called *Kunaichō* (Imperial Household Agency, Tokyo) 宮內庁. Also known as the Chongning canon 崇寧藏.
- Mi* One of the canons collated by the editors of *T*: the “Ming edition 明本.” (It is identical with *Js*.)
- Na* One of the canons collated by the editors of *Ji₁*: the Yongle Nan 永樂南 edition of the Ming Period: 南 (completed in ca 1419 CE).
- Pu* One of the canons collated by the editors of *Ji₁*: the Puning 普寧 edition of the Yuan 元 Period (1277–1299 CE): 普.
- Qi* One of the canons collated by the editors of *Ji₁*: the Qing 清 edition: 清 (1735–1738 CE).
- Qs* One of the canons collated by the editors of *Ji₁*: The Qisha 磧砂 edition of the Song 宋 Period: 磧 (1216–1322 CE).
- So* One of the canons collated by the editors of *T*: the “Song edition 宋本” (1240–1252 CE).
- T₁* *Da fangdeng rulai zang jing* 大方等如來藏經. *T* 666, vol. 16, 457a1–460b21. The edition is based on *Ga₁*, collated are *Ku*, *Mi*, *So* and *Yu*.

¹² *Fangshan shijing* (*Liao jinkejing*) (*The sūtras [carved] in stone from Fangshan (carved in the Liao Period)) 房山石經 (遼金刻經), ed. Zhongguo Fojiao Xiehui 中國佛教協會, 22 vols. Peking: Zhongguo Fojiao Tushuwenwu Guan, 1986–1993.

¹³ *Koryō Taejanggyōng* 高麗大藏經, 48 vols. Photo-reprint. Seoul: Dongguk University, 1957–1976. Reprint Taipei: Xinwenfeng, 1982.

¹⁴ *Zhonghua Dazangjing* (*Chinese Tripiṭaka) 中華大藏經, ed. ‘Zhonghua Dazangjing’ Bianjiju 《中華大藏經》編輯局, 106 vols. Peking: Zhonghua Shuju, 1984–1996.

- Yu* One of the canons collated by the editors of *T*: the “Yuan edition 元本.” (It is identical with *Pu*.)
- Zi* One of the canons collated by the editors of *Ji*₁: The Zifu 資福 edition of the Song 宋 Period: 資. (It is identical with *So*.)

Concerning *T* 667

- Ch*₂ Chinese translation of the *TGS* by Amoghavajra (705–774 CE).
- Ga*₂ *Ch*₂ in the Second Korean Edition of the Chinese Canon (高麗大藏經) (1236–1251 CE):¹³ *Da fangguang rulai zang jing* 大方廣如來藏經. No. 1359, vol. 37, 231a1–238c11.
- Ji*₂ *Ch*₂ in the Zhonghua Dazangjing 中華大藏經:¹⁴ *Da fangguang rulai zang jing* 大方廣如來藏經. No. 387, vol. 20, 559b1–563c5. The source text is the Jin edition 金藏廣勝寺本 (1149–1173 CE) with only 559b supplied from *Ga*₂. The rest of the text is also collated with *Ga*₂.
- T*₂ *Da fangguang rulai zang jing* 大方廣如來藏經. *T* 667, vol. 16, 460b25–466a6.

E Appendices

Appendix A: Comparative Chart of the Bodhisattva Names in OE

	<i>Tib</i>	Reconstruction based on <i>Tib</i> ¹	<i>Ch</i> ₁	<i>Ch</i> ₂
1	Chos kyi blo gros	<i>Dharmamati</i>	法慧	法慧
2	Sengge'i blo gros	<i>Siôhamati</i>	師子慧	師子慧
3	sTag gi blo gros	<i>Vy¹ghramati</i>	金剛慧 ²	金剛慧
			金剛藏	
4	Don gyi blo gros	<i>Arthamati</i>	調慧 ³	義慧
5	Rin po che'i blo gros	<i>Ratnamati</i> ⁴		
6	Rab mchog blo gros	* <i>Pravaramati</i>	妙慧	勝慧
7	Zla 'od	<i>Candraprabha</i>	月光	月光
8	Rin chen zla 'od	* <i>Ratnacandraprabha</i>	寶月 ⁵	寶月光
9	Zla ba nya ba'i 'od	* <i>Pûrôacandraprabha</i>	滿月 ⁵	滿月光
10	rNam par gnon pa chen po	<i>Mah¹vikr¹min</i>	勇猛 ³	大勇健
11	rNam par gnon pa dpag med	* <i>Aprameyavikr¹min</i>	無量勇	無量勇健
12	rNam par gnon pa mtha' yas	<i>Anantavikr¹min</i>	無邊勇	無邊勇健
13	'Jig rten gsum rnam par gnon	<i>Trailokyavikr¹min</i>	超三世	三世勇健
14	Mi g.yo ba'i gnas rnam par gnon	* <i>Acalapadavikr¹min</i> ⁶		
15	mThu chen thob	<i>Mah¹sth¹mapr¹pta</i>	觀世音 ⁷	得大勢
16	sPyan ras gzigs dbang phyug	<i>Avalokitevara</i>	大勢至 ⁷	觀自在
17	sPos kyi glang po	<i>Gandhahastin</i>	香象	香象
18	sPos dga'	* <i>Gandharati</i>	香上 ³	香悅
19	sPos dga' ba'i dpal	* <i>Gandharatiëri</i>	香上首 ³	香悅吉祥
20	dPal gyi snying po	<i>Ërîgarbha</i>	首藏 ³	吉祥藏
21	Nyi ma'i snying po	<i>Sûryagarbha</i>	日藏	
22	Tog ⁸	<i>Ketu</i>	幢相	計都
23	Tog chen po	<i>Mah¹ketu</i>	大幢相	大幢
24	Tog dri ma med pa	* <i>Vimalaketu</i>	離垢幢	無垢幢
25 ⁹	Rin chen mtha' yas dbyu gu	* <i>Anantaratnayašhi</i>	無邊光	無上幢

¹ I did not place an asterisk before the reconstructed name in the cases where I found occurrences of this name in the Sanskrit literature consulted, particularly in the *SP*. Whenever *Tib* allowed for an unambiguous reconstruction of the Sanskrit, I also refrained from the use of the asterisk. This is especially the case when *Tib*, *Bth*, *Ch*₁ and *Ch*₂ are clearly based on the same Indian reading and exclude a variety of other possible Skt. reconstructions based on *Tib* alone.

² The reading *Vyâghramati* of *TGS*₂ instead of *Vajramati* (*Ch*₁) was probably caused by the name *Siôhamati* earlier, which also contains the name of a beast of prey.

³ Deviates from *Tib* and the reconstruction based on *Tib*.

⁴ *Ratnamati* (5) is positioned between 43 and 44 in *Ch*₁.

⁵ *Ch*₁: *Ratnacandra* and *Pûrôacandra*. The triad *Ratnacandra*, *Ratnaprabha* and *Pûrôacandra* appears in *SP*3.6.

⁶ See *Bth*: *rKang pa mi g.yo bar dpa' ba* suggesting °*pâda*° instead of °*pada*°.

⁷ *Ch*₁ mentions *Avalokitevara* before *Mah¹sth¹mapr¹pta*. The sequence in *Ch*₁ corresponds to *SP*3.4.

⁸ *Bth* has *dKon mchog gi dpal* (*Ratnaketu*) instead.

	<i>Tib</i>	Reconstruction based on <i>Tib</i> ¹	<i>Ch</i> ₁	<i>Ch</i> ₂
26 ⁹	Rin chen dbyu gu 'dor	* <i>Tyaktaratnayaṣṭhi</i>	放光	極解寶刹
27 ⁹	Rin chen dri med dbyu gu	* <i>Vimalaratnayaṣṭhi</i>	離垢光	無垢寶刹
28	mChog tu dga' ba'i rgyal po	<i>Prâmodyar¹ja</i>	喜王	歡喜王
29	rTag tu rab dga'	* <i>Sadâpramudita</i>	常喜	常歡喜
30	Lag na rin po che	<i>Ratnap¹oi</i>	寶手	
31	Nam mkha'i mdzod	<i>Gaganagañja</i>	虛空藏	虛空庫
32	Ri bo	<i>Meru</i>	離憍慢 ³	迷盧
33	Ri rab	<i>Sumeru</i>	須彌山	大迷盧 ¹⁰
34	Ri bo chen po	<i>Mah¹meru</i>		蘇迷盧 ¹⁰
35	Yon tan rin chen snang	* <i>Guðaratn¹loka</i>	光德王 ³	功德寶光
36	gZungs kyi dbang phyug gi rgyal po	<i>Dh¹raoïvarar¹ja</i>	總持自在王	陀羅尼自在王
37	Sa 'dzin	<i>Dharaoïôdhara</i>	總持 ¹¹	持地
			滅眾病 ¹²	
38	Sems can thams cad kyi nad sel	* <i>Sarvasattvarogānīvartana</i>	療一切眾生病	除一切有情病
39	Rab tu yid dga'	* <i>Prâmodyamānas</i>	歡喜念	歡喜意
40	Yid skyo	* <i>Khinnamānas</i>	厭意	憂悲意
41	sKyo med	* <i>Akhinna</i>	常厭 ³	無憂
42	'Od byed	* <i>Jyotiṣkara</i>	普照 ³	光藏 ²
43	Tsan dan	<i>Candana</i>	月明 ¹³	梅檀
			寶慧 ⁴	
44 ¹⁴	g.Yo ba zlog	* <i>Īhāvivarta(na)</i>	轉女身 ³	於此無爭 ³
45	dPag med mngon bsgrags dbyangs	* <i>Apramey¹bhigarjitasvara</i>	大雷音	無量雷音
46	Byang chub kun nas bslang	* <i>Bodhisamutth¹pana</i>	導師 ³	起菩提行 ³
47	mThong ba don yod	<i>Amoghadarāin</i>	不虛見	不空見
48	Chos thams cad la dbang sgyur ba	<i>Sarvadharmavaivartīn</i>	一切法自在	一切法自在
49	Byams pa	<i>Maitreya</i>	彌勒	慈氏
50	'Jam dpal gzhon nur gyur pa	<i>Mañjuerī kumārabhūta</i>	文殊師利 ¹⁵	曼珠室利童真

⁹ The translations partly differ. Whereas *Tib* (*dbyu gu*), *Bth* (*khar ba* to be emended to *mkhar ba* or *'khar ba*) and *Ch*₂ (幢; 刹) show *yaṣṭhi* at the end of the compound (25–27; 3966 missing in *Bth*), *Ch*₁ reads **raemi* (光) or something similar. *Ch*₁ further does not give any equivalent for *ratna*. In 25 *Ch*₂ reads *anuttara* (無上) instead of *ananta* (*Ch*₁) or *anantara(tna)* of the Tibetan (*Bth*. read *rin po che* instead of *chen po che* for Skt. *ratna*).

¹⁰ *Ch*₂ mentions *Mahāmeru* before *Sumeru*.

¹¹ *Ch*₁ reads *Dh¹raoï*.

¹² Similar to 38.

¹³ *Ch*₁ reads **Candrābha* instead of *Candana*.

¹⁴ The versions differ considerably. A common element is probably *-vivarta(na)*: cf. *Tib*: *zlog*, *Bth*: *ldog pa*, *Ch*₁: 轉; *Ch*₂ (爭) reads *vivāda* instead? *g.Yo ba* (*Tib*) could be a translation of *iha* (cf. *MVy* 7320: *g.yo ba med pa* for *nirīha*; *DTS* 165a: *iha* for *g.yo ba*). *Ch*₂ (於此) possibly understood *iha*. *Bth*: *dris las* could be emended to *'di las*. However, *Ch*₁ does not correspond: 轉女身 for **strībhāva(vi)varta(na)*. Whereas the reconstruction based on *Tib* should be taken as “the one who expels exertion,” *Bth* (emended to *'di las mi ldog pa*) rather suggests “the one who does not turn away from here” (**ihāvivarta(na)*).

¹⁵ *Ch*₁ overlooks *kum¹rabhūta*.

Appendix B: Comparative Chart of Pāda Sequences

In the following chart, a square remains empty if the pāda order of the verse corresponds to the presumed original pāda order of *TGS*₂. A question mark shows that the content of the pāda(s) is different and cannot be compared. “0” indicates that the pāda or pādas are missing.

Appendix C: Comparative Table of Sections and Chapters of the Chinese and Tibetan Editions

In this table, empty squares indicate that the part is not found in the manuscript or print. (In the case of the Derge print I have restricted myself to the edition of 0L–9C, though the complete text is available.) Dark colored squares indicate that the chapter is missing in the manuscript fragments. Numbers in parentheses show that the chapter is only partially extant in the fragments.

Bibliography

The sigla, symbols and graphic devices used in my critical editions of the Tibetan and Chinese materials are found at the end of part D. The lack of an asterisk before the English translation of a Japanese or Chinese title means that the translation of the title appears in the publication itself.
